Salesforce PDII Latest Exam Cram, Key PDII Concepts

We provide you with our best Salesforce PDII exam study material, which builds your ability to get high-paying jobs. Salesforce PDII Exam Dumps includes Salesforce PDII Dumps PDF format, desktop PDII practice exam software, and web-based PDII practice test software.

Salesforce PDII certification exam is intended for developers who have completed the Salesforce Certified Platform Developer I certification, which covers the basics of Salesforce development. The PDII Certification Exam focuses on advanced topics and is designed to test a developer's ability to design and implement complex solutions using the Salesforce platform.

Salesforce Certified Platform Developer II (PDII) Sample Questions (Q56-Q61):

NEW QUESTION # 56

A developer needs to write tests to ensure that code doesn't fail when it is deployed to a different organization. The developer also must ensure that the code works properly with organization sharing rules and ensure that the code mitigates errors due to limits. How can the developer meet these requirements? Choose 2 answers

- A. Use the `runAs ()` method to test the application in different user contexts.
- B. Handle all exceptions that are caught by adding an empty catch (`Exception e`) statement.
- C. Use `SeeAllData=true` to avoid delaying tests due to creating test data.
- D. Create all test data before calling the `Test.startTest ()` and `Test.stopTest ()` methods.

Answer: A,D

NEW QUESTION # 57

```
List<Account> accountList = new List<Account>();
for( Account anAccount : trigger.new )
{
    Region__c theRegion = [
        SELECT Id, Name, Region_Manager__c
        FROM Region__c
        WHERE Name = :anAccount.Region_Name__c
    ];
    anAccount.OwnerId = theRegion.Region_Manager__c;
    accountList.add( anAccount );
}

update accountList;
```

Consider the above trigger intended to assign the Account to the manager of the Account's region, Which two changes should a developer make in this trigger to adhere to best practices?

- A. Use a Map `accountMap` instead of `List accountList`.
- B. Use a Map to cache the results of the `Region__c` query by Id.
- C. Remove the last line updating `accountList` as It Is not needed.
- D. Move the `Region__c` query to outside the loop.

Answer: C,D

Explanation:

Moving the SOQL query outside the loop prevents it from being executed multiple times, which can lead to hitting governor limits. The last line updating the `accountList` is indeed needed to save the changes made to the Account records, so removing it is not recommended. Instead, the query should be moved outside the loop and records should be collected in a map for efficiency, which is not one of the provided options. References:

NEW QUESTION # 58

A company processes Orders within their Salesforce instance. When an Order's status changes to 'Paid' it must notify the company's order management system (OMS). The OMS exposes SOAP web service endpoints to listen for when to retrieve the data from Salesforce. What is the optimal method to implement this?

- A. Generate the Enterprise WSDL and use it to make a callout to the OMS.
- B. Create an Outbound Message that contains the session ID and send it to the OMS.
- C. Generate the Partner WSDL and use it to make a callout to the OMS.
- D. Create an Apex trigger and make a callout to the OMS from the trigger.

Answer: A

NEW QUESTION # 59

What is the transaction limit for the number of records for SOQL queries?

- A. 10,000
- B. 20,000
- C. There is no limit
- D. 5,000
- E. 50,000

Answer: E

NEW QUESTION # 60

A company represents their customers as Accounts in Salesforce. All customers have a unique Customer_Number__c that is unique across all of the company's systems. They also have a custom Invoice__c object, with a Lookup to Account, to represent invoices that are sent out from their external system. This company wants to integrate invoice data back into Salesforce so Sales Reps can see when a customer is paying their bills on time. What is the optimal way to implement this?

- A. Ensure Customer_Number__c is an External ID and that a custom field Invoice_Number__c is an External ID and Upsert invoice data nightly.
- B. Use Salesforce Connect and external data objects to seamlessly import the invoice data into Salesforce without custom code.
- C. Query the Account Object upon each call to insert invoice data to fetch the Salesforce ID corresponding to the Customer Number on the invoice
- D. Create a cross-reference table in the custom invoicing system with the Salesforce Account ID of each Customer and insert invoice data nightly.

Answer: A
