Sample Professional-Cloud-Database-Engineer Test Online, Pass Professional-Cloud-Database-Engineer Guaranteed

The latest Professional-Cloud-Database-Engineer dumps collection covers everything you need to overcome the difficulty of real questions and certification exam. Accurate Professional-Cloud-Database-Engineer test answers are tested and verified by our professional experts with the high technical knowledge and rich experience. You may get answers from other vendors, but our Professional-Cloud-Database-Engineer briandumps pdf are the most reliable training materials for your exam preparation.

Earning the Google Professional-Cloud-Database-Engineer Certification can help you advance your career in the field of cloud database management. Google Cloud Certified - Professional Cloud Database Engineer certification demonstrates that you have the skills and expertise required to design, develop, and maintain scalable and secure databases on the Google Cloud Platform. With this certification, you can enhance your job prospects and increase your earning potential. Additionally, you can gain recognition as a proficient database professional who can handle complex database management tasks on the cloud.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q99-Q104):

NEW QUESTION # 99

Your company uses the Cloud SQL out-of-disk recommender to analyze the storage utilization trends of production databases over the last 30 days. Your database operations team uses these recommendations to proactively monitor storage utilization and implement corrective actions. You receive a recommendation that the instance is likely to run out of disk space. What should you do to address this storage alert?

- A. Compress the data using a different compression algorithm.
- B. Normalize the database to the third normal form.
- C. Create another schema to load older data.
- D. Manually or automatically increase the storage capacity.

Answer: D

Explanation:

<https://cloud.google.com/sql/docs/mysql/instance-settings#storage-capacity-2ndgen>

NEW QUESTION # 100

Your company is launching a new globally distributed application with strict requirements for low latency, strong consistency, zero downtime, and high availability (HA). You need to configure a scalable database solution to support anticipated rapid growth and optimal application performance. What should you do?

- A. Create a spanner instance across regions for optimal performance.
- B. Implement Bigtable with replication across multiple regions and configure to prioritize data accuracy.
- C. Create an AlloyDB instance in HA mode with a cross-region read replica.
- D. Create a Cloud SQL instance in HA mode with a cross-region read replica.

Answer: A

NEW QUESTION # 101

You are designing a database strategy for a new web application in one region. You need to minimize write latency. What should you do?

- A. Use Cloud SQL with cross-region replicas.
- B. Use Cloud Spanner in a regional configuration.
- C. Use zonal Cloud SQL without high availability (HA).
- D. Use high availability (HA) Cloud SQL with multiple zones.

Answer: A

NEW QUESTION # 102

You are configuring the networking of a Cloud SQL instance. The only application that connects to this database resides on a Compute Engine VM in the same project as the Cloud SQL instance. The VM and the Cloud SQL instance both use the same VPC network, and both have an external (public) IP address and an internal (private) IP address. You want to improve network security.

What should you do?

- A. Specify an authorized network with the CIDR range of the VM.
- B. Disable and remove the external IP address assignment.
- C. Disable and remove the internal IP address assignment.
- **D. Disable both the external IP address and the internal IP address, and instead rely on Private Google Access.**

Answer: D

NEW QUESTION # 103

You need to provision several hundred Cloud SQL for MySQL instances for multiple project teams over a one-week period. You must ensure that all instances adhere to company standards such as instance naming conventions, database flags, and tags. What should you do?

- **A. Automate instance creation by setting up Terraform scripts.**
- B. Create clones from a template Cloud SQL instance.
- C. Create the instances using the Google Cloud Console UI.
- D. Automate instance creation by writing a Dataflow job.

Answer: A

NEW QUESTION # 104

.....

To be well-prepared, you require trust worthy and reliable FreeCram practice material. You also require accurate FreeCram study material to polish your capabilities and improve your chances of passing the Professional-Cloud-Database-Engineer certification exam. FreeCram facilitates your study with updated Google Professional-Cloud-Database-Engineer Exam Dumps. This Professional-Cloud-Database-Engineer exam prep material has been prepared under the expert surveillance of 90,000 highly experienced FreeCram professionals worldwide.
