SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) prep material there is. The 3 kinds of SolarWinds SCP-NPM preparation formats ensure that there are no lacking points in a student when he attempts the actual SCP-NPM exam. The SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) exam registration fee varies between 100\$ and 1000\$, and a candidate cannot risk wasting his time and money, thus we ensure your success if you study from the updated SolarWinds SCP-NPM practice material. We offer the demo version of the actual SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) questions so that you may confirm the validity of the product before actually buying it, preventing any sort of regret.

With the pass rate is 98.65% for SCP-NPM learning materials, our product has gained popularity among candidates, the also send some thank letter for helping them pass the exam successfully. We have a professional team to research the latest information for SCP-NPM exam materials, and we can ensure that SCP-NPM Exam Dumps you receive are the latest one. What's more, SCP-NPM exam dumps are high quality, and you can pass the exam just one time. We offer you free update for 365 days after purchasing, and our system will send the update version for SCP-NPM exam dumps to you automatically.

CramPDF SCP-NPM Dumps With Money Back Guarantee

Now on the Internet, a lot of online learning platform management is not standard, some web information may include some viruses, cause far-reaching influence to pay end users and adverse effect. Choose the SCP-NPM Study Tool, can help users quickly analysis in the difficult point, high efficiency of review, and high quality through the SolarWinds Network Performance Monitor (NPM) Exam exam, work for our future employment and increase the weight of the promotion, to better meet the needs of their own development.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

You added a device for NPM to monitor. You can see CPU and memory statistics, but want to see a statistic that NPM does not support out of the box. Which features can you use to collect the statistics you want from the device? (Choose all that apply.)

- A. Device templates
- B. Application monitor templates
- C. Manage Pollers in Device Studio
- D. Universal Device Pollers (UnDP)

Answer: C,D

Explanation:

If you want to see a statistic that NPM does not support out of the box, you can use the Manage Pollers feature in Device Studio or the Universal Device Pollers (UnDP) feature to collect the statistics you want from the device. Both features allow you to create custom monitors for almost any statistic provided by SNMP based on its Management Information Base (MIB) and object identifier (OID). You can also assign the custom pollers to specific devices, view the polled data in the Orion Web Console, and use the data in alerts and reports. The difference between the two features is that Manage Pollers is a web-based interface that simplifies the creation and management of custom pollers, while UnDP is a standalone application that offers more advanced options and flexibility. Device templates and application monitor templates are not features that can be used to collect custom statistics from devices, as they are predefined sets of monitors for specific device types or applications that NPM supports out of the box.

Define a custom statistic to monitor in the NPM

Manage pollers using Device Studio

[Monitor custom statistics based on OIDs with Universal Device Pollers]

NEW QUESTION # 18

Users report that NPM performance is slow when managing devices through the Orion Web Console. You verify the SNMP trapping is responsible for the poor performance. How do you resolve this issue?

- A. Reduce the number of days SNMP messages are kept in the SolarWinds Trap Viewer
- B. Add the devices as managed nodes to cut down on the trap messages received
- C. Point the devices to a trap manager and filter unwanted messages before forwarding remaining traps to the Orion Platform
- D. Add an Additional Web Server to handle the load of users accessing the NPM Orion Web Console

Answer: C

Explanation:

SNMP traps are unsolicited messages sent by network devices to report events or issues. If NPM receives too many traps from devices that are not managed by NPM, or traps that are not relevant for monitoring, the performance of the Orion Web Console can be affected. To resolve this issue, you can point the devices to a trap manager, such as Kiwi Syslog Server, and configure it to filter out unwanted traps before forwarding the remaining ones to the Orion Platform. This way, NPM will only process the traps that are important for monitoring and alerting, and reduce the load on the database and web server. References: Configure SNMP traps in NPM, Filter traps in Kiwi Syslog Server, [Forward traps to another host in Kiwi Syslog Server]

NEW QUESTION # 19

You can display Palo Alto firewalls on Orion Maps.

- A. True
- B. False

Answer: A

Explanation:

Orion Maps 2.0 supports displaying Palo Alto firewalls as network devices, along with their interfaces, zones, policies, and traffic data. You can also view the firewall status, alerts, and events on the map. To add a Palo Alto firewall to an Orion Map, you need to have Network Insight for Palo Alto enabled in NPM, and discover the firewall using SNMP and API polling. References: Orion Maps 2.0, New Alerting, and Palo Alto Networks Monitoring - SolarWinds Lab Episode #77, SolarWinds Lab Episode 77: Orion Maps 2.0, New Alerting, and Palo Alto Networks Monitoring - Orange Matter, Network Insight for Palo Alto Networks in NPM

NEW QUESTION # 20

You receive an alert that one of your routers is experiencing critical level CPU utilization. The router details in the web console show as critical utilization, but you do not consider the utilization on that router to be at a critical level.

What change can you make in NPM to reflect a CPU utilization level you consider to be critical for the device?

- A. Change the global critical CPU threshold for node statuses
- B. Change the trigger threshold on the alert
- **C. Change the critical CPU threshold on the node**
- D. Copy the alert, change the trigger threshold, and limit the scope on that device

Answer: C

Explanation:

By default, NPM uses the global critical CPU threshold for node statuses, which is 90%. However, you can override this threshold for individual nodes by editing their properties and specifying a custom value for the critical CPU threshold. This way, you can adjust the threshold according to the specific characteristics and performance of each node. Changing the critical CPU threshold on the node will affect how the node status is calculated and displayed in the web console, as well as how the alerts are triggered based on the CPU utilization. References: Thresholds in the SolarWinds Platform; CPU Critical Threshold - Forum - Network Performance Monitor (NPM) - THWACK

NEW QUESTION # 21

How many agents does NPM require for Quality of Experience, NetPath, and system monitoring on the same Windows server?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

NPM requires only one agent for Quality of Experience, NetPath, and system monitoring on the same Windows server. The agent is a software component that collects data from the server and sends it to the Orion server¹. The agent can perform multiple tasks, such as packet analysis, network path analysis, and system health monitoring, depending on the configuration and the license². You can install the agent on the server either manually or remotely from the Orion Web Console³.
