

Test XK0-005 Practice - XK0-005 Download Demo

P.S. Free 2025 CompTIA XK0-005 dumps are available on Google Drive shared by Exams-boost: https://drive.google.com/open?id=1PbkvAGDzvINWWb6InyYf9i_Nzakysl3T

The XK0-005 pdf dumps file is the most efficient and time-saving method of preparing for the CompTIA XK0-005 exam. CompTIA XK0-005 dumps pdf can be used at any time or place. You can use your pc, tablet, smartphone, or any other device to get XK0-005 PDF Question files. And price is affordable.

Without no doubt that accuracy of information is of important for a XK0-005 study material. It can be said exactly that the precision and accuracy of our Exams-boost's XK0-005 study materials are beyond question. All questions and answers have passed the test of time and are approved by experienced professionals who recommend them as the easiest route to certification testing. Every customer who has used our XK0-005 Study Materials consider this to be a material that changes their life a lot, so they recommend it as the easiest way to pass the certification test. Our XK0-005 study materials are constantly updated by our experts and improved according to the changing standards of the actual examination standards. We can guarantee that the information on our questions is absolutely true and valid.

XK0-005 Download Demo, XK0-005 Official Study Guide

Today, the prevailing belief is that knowledge is stepping-stone to success. By discarding outmoded beliefs, our XK0-005 exam materials are update with the requirements of the authentic exam. To embrace your expectations and improve your value during your review, you can take joy and challenge the XK0-005 Exam may bring you by the help of our XK0-005 guide braindumps. You will be surprised by the high-effective of our XK0-005 study guide!

CompTIA Linux+ Certification Exam Sample Questions (Q461-Q466):

NEW QUESTION # 461

A Linux administrator needs to obtain a list of all volumes that are part of a volume group. Which of the following commands should the administrator use to accomplish this task?

- A. `lvs`
- B. `vgs`
- C. `fdisk -l`
- D. `pvs`

Answer: A

NEW QUESTION # 462

An administrator is investigating why a Linux workstation is not resolving a website. The output of `dig` and `nslookup` shows that IPv4 resolution is working, but IPv6 resolution fails.

The administrator executes:

```
nslookup -querytype=AAAA www.comptia.org
```

Can't find www.comptia.org: No answer

The workstation has a static entry in `/etc/hosts`:

CopyEdit

```
104.18.99.101 www.comptia.org
```

Which of the following is the most likely cause?

- A. The firewall needs to be modified to allow outbound HTTP and HTTPS.
- B. The remote website does not support IPv6, and the workstation requires it.
- C. The nameserver in `/etc/resolv.conf` needs to be updated to 8.8.8.8.
- D. The static entry needs to be removed from `/etc/hosts`.

Answer: D

Explanation:

* The presence of a static entry in `/etc/hosts` for `www.comptia.org` forces the system to use this IP address instead of querying DNS.

* This prevents proper IPv6 (AAAA) resolution, as `/etc/hosts` only contains an IPv4 (A) record.

* Removing this static entry allows the system to query DNS for both IPv4 and IPv6 records.

References:

* Linux `/etc/hosts` File - Linux Documentation

NEW QUESTION # 463

Joe, a user, is unable to log in to the Linux system Given the following output:

```
# grep joe /etc/passwd /etc/shadow
/etc/passwd:joe:x:1001:1001::/home/joe:/bin/nologin
/etc/shadow:joe:$6$3u0w6qWx987610ab:18H987634534voj.118883:0:99999:7:::
```

Which of the following command would resolve the issue?

- A. `pam_tally2 -u joe -r`
- B. `usermod -s /bin/bash joe`
- C. `passwd -u joe`
- D. `chage -E 90 joe`

Answer: A

Explanation:

Based on the output of the image sent by the user, Joe is unable to log in to the Linux system because his account has been locked due to too many failed login attempts. The `pam_tally2 -u joe -r` command will resolve this issue by resetting Joe's failed login counter to zero and unlocking his account. This command uses the `pam_tally2` module to manage user account locking based on login failures. The `usermod -s /bin/bash joe` command will change Joe's login shell to `/bin/bash`, but this will not unlock his account. The `passwd -u joe` command will unlock Joe's password if it has been locked by `passwd -l joe`, but this will not reset his failed login counter or unlock his account if it has been locked by `pam_tally2`. The `chage -E 90 joe` command will set Joe's account expiration date to 90 days from today, but this will not unlock his account or reset his failed login counter. References: CompTIA Linux+

NEW QUESTION # 464

A systems administrator receives reports that several virtual machines in a host are responding slower than expected. Upon further investigation, the administrator obtains the following output from one of the affected systems:

```
16:00:01 PM   CPU   %user   %nice   %system %iowait  %steal   %idle
16:10:01 PM   all     17.58    0.00    9.36    0.00   54.33   18.73
16:20:01 PM   all     22.34    0.00   11.75    0.00   48.69   17.22
16:30:01 PM   all     25.49    0.00   11.69    0.00   57.85    4.97
16:40:01 PM   all     25.49    0.00   11.69    0.00   53.21    9.61
16:50:01 PM   all     25.49    0.00   11.69    0.00   56.49    6.33
```

Which of the following best explains the reported issue?

- A. The physical host is running out of CPU resources, leading to insufficient CPU time being allocated to virtual machines.
- B. The physical host has enough CPU cores, leading to users running more processes to compensate for the slower response times.
- **C. The virtual machine is running out of CPU resources, leading to users experiencing longer response times.**
- D. The virtual machine has enough CPU cycles, leading to the system use percentage being higher than expected.

Answer: C

Explanation:

Based on the output from one of the affected systems, the best explanation for the reported issue is that the virtual machine is running out of CPU resources, leading to users experiencing longer response times (D). The output shows that the system use percentage is very high (57.85%), indicating that the virtual machine is using most of its CPU cycles for system processes. This leaves little CPU time for user processes, which results in slower performance. The other explanations are not supported by the output or are contradictory. References:

NEW QUESTION # 465

An administrator transferred a key for SSH authentication to a home directory on a remote server. The key file was moved to .ssh/authorized_keys location in order to establish SSH connection without a password.

However, the SSH command still asked for the password. Given the following output:

```
[admin@linux ~]$ ls -lhZ .ssh/auth*
-rw-r--r--. admin unconfined_u:object_r:user_home_t:s0 .ssh/authorized_keys
```

Which of the following commands would resolve the issue?

- A. `ssh_keygen -t rsa -o .ssh/authorized_keys`
- **B. `chmod 600 .ssh/authorized_keys`**
- C. `restorecon .ssh/authorized_keys`
- D. `chown root:root .ssh/authorized_keys`

Answer: B

Explanation:

Explanation

The command that would resolve the issue is `chmod 600 .ssh/authorized_keys`. This command will change the permissions of the .ssh/authorized_keys file to 600, which means that only the owner of the file can read and write it. This is necessary for SSH key authentication to work properly, as SSH will refuse to use a key file that is accessible by other users or groups for security reasons.

The output of `ls -l` shows that currently the

.ssh/authorized_keys file has permissions of 664, which means that both the owner and group can read and write it, and others can read it.

The other options are not correct commands for resolving the issue. The `restorecon .ssh/authorized_keys` command will restore the default SELinux security context for the .ssh/authorized_keys file, but this will not change its permissions or ownership. The

ssh_keygen -t rsa -o .ssh/authorized_keys command is invalid because ssh_keygen is not a valid command (the correct command is ssh-keygen), and the -o option is used to specify a new output format for the key file, not the output file name. The chown root:root .ssh/authorized_keys command will change the owner and group of the .ssh/authorized_keys file to root, but this will not change its permissions or make it accessible by the user who wants to log in with SSH key authentication. NEW QUESTION # 466

.....

Compared with those practice materials which are to no avail and full of hot air, our XK0-005 guide tests outshine them in every aspect. If you make your decision of them, you are ready to be thrilled with the desirable results from now on. The passing rate of our XK0-005 Exam Torrent is up to 98 to 100 percent, and this is a striking outcome staged anywhere in the world. They are appreciated with passing rate up to 98 percent among the former customers. So they are in ascendant position in the market.
