

Testing PCEP-30-02 Center, Test PCEP-30-02 Engine

What's more, part of that LatestCram PCEP-30-02 dumps now are free: <https://drive.google.com/open?id=1kQWEsvYNALFh5wBDrqccwrjTXLBOaqLY>

Our Python Institute PCEP-30-02 practice exam software is the most impressive product to learn and practice. We have a team of professional software developers to ensure the software's productivity. After installation, Python Institute PCEP-30-02 Practice Exam software is used without an internet connection.

Python Institute PCEP-30-02 Exam Syllabus Topics:

Topic	Details
Topic 1	• Computer Programming Fundamentals: This section of the exam covers fundamental concepts such as interpreters, compilers, syntax, and semantics. It covers Python basics: keywords, instructions, indentation, comments in addition to Booleans, integers, floats, strings, and Variables, and naming conventions. Finally, it covers arithmetic, string, assignment, bitwise, Boolean, relational, and Input • output operations.
Topic 2	• parameters, arguments, and scopes. It also covers Recursion, Exception hierarchy, Exception handling, etc.
Topic 3	• Control Flow: This section covers conditional statements such as if, if-else, if-elif, if-elif-else
Topic 4	• Data Collections: In this section, the focus is on list construction, indexing, slicing, methods, and comprehensions; it covers Tuples, Dictionaries, and Strings.

Python Institute PCEP-30-02 Dumps - Pass Exam Immediately [2025]

Our products are compiled by experts from various industries and they are based on the true problems of the past years and the development trend of the industry. What's more, according to the development of the time, we will send the updated materials of PCEP-30-02 test prep to the customers soon if we update the products. Under the guidance of our study materials, you can gain unexpected knowledge. Finally, you will pass the exam and get a PCEP-30-02 Certification. Customers can learn according to their actual situation and it is flexible. Next I will introduce the advantages of our PCEP-30-02 test prep so that you can enjoy our products.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample

Questions (Q30-Q35):

NEW QUESTION # 30

Arrange the code boxes in the correct positions to form a conditional instruction which guarantees that a certain statement is executed when the speed variable is less than 50.0.

speed : < if 50.0

Answer:

Explanation:

if speed < 50.0:

Explanation:

if speed < 50.0:

One possible way to arrange the code boxes in the correct positions to form a conditional instruction which guarantees that a certain statement is executed when the speed variable is less than 50.0 is:

```
if speed < 50.0:  
    print("The speed is low.")
```

This code uses the `if` keyword to create a conditional statement that checks the value of the variable `speed`. If the value is less than 50.0, then the code will print "The speed is low." to the screen. The `print` function is used to display the output. The code is indented to show the block of code that belongs to the `if` condition.

You can find more information about the `if` statement and the `print` function in Python in the following references:

- * Python If ... Else
- * Python Print Function

NEW QUESTION # 31

What happens when the user runs the following code?

```

speed
while speed < 30:
    speed *= 2
    if speed > 100:
        continue
    print("*", end="")
else:
    print("***")

```

- A. The program outputs five asterisks (*****) to the screen.
- **B. The program enters an infinite loop.**
- C. The program outputs three asterisks (***) to the screen.
- D. The program outputs one asterisk (*) to the screen.

Answer: B

Explanation:

Explanation

The code snippet that you have sent is a while loop with an if statement and a print statement inside it. The code is as follows:

while True: if counter < 0: print("") else: print("***")

The code starts with entering a while loop that repeats indefinitely, because the condition "True" is always true. Inside the loop, the code checks if the value of "counter" is less than 0. If yes, it prints a single asterisk () to the screen. If no, it prints three asterisks (**) to the screen. However, the code does not change the value of "counter" inside the loop, so the same condition is checked over and over again. The loop never ends, and the code enters an infinite loop.

The program outputs either one asterisk () or three asterisks (**) to the screen repeatedly, depending on the initial value of "counter". Therefore, the correct answer is D. The program enters an infinite loop.

NEW QUESTION # 32

What is the expected output of the following code?

```

counter = 84 // 2
if counter < 0:
    print("*")
elif counter >= 42:
    print("***")
else:
    print("**")

```

- A. *
- B. The code produces no output.
- **C. ****
- D. ***

Answer: C

Explanation:

The code snippet that you have sent is a conditional statement that checks if a variable "counter" is less than 0, greater than or equal to 42, or neither. The code is as follows:

if counter < 0: print("") elif counter >= 42: print("") else: print("") The code starts with checking if the value of "counter" is less than 0. If yes, it prints a single asterisk () to the screen and exits the statement. If no, it checks if the value of "counter" is greater than or equal to 42. If yes, it prints three asterisks () to the screen and exits the statement. If no, it prints two asterisks () to the screen and

exits the statement.

The expected output of the code depends on the value of "counter". If the value of "counter" is 10, as shown in the image, the code will print two asterisks (**) to the screen, because 10 is neither less than 0 nor greater than or equal to 42. Therefore, the correct answer is C. * * Reference: [Python Institute - Entry-Level Python Programmer Certification]

NEW QUESTION # 33

A set of rules which defines the ways in which words can be coupled in sentences is called:

- A. lexis
- B. semantics
- C. syntax
- D. dictionary

Answer: C

Explanation:

Syntax is the branch of linguistics that studies the structure and rules of sentences in natural languages. Lexis is the vocabulary of a language. Semantics is the study of meaning in language. A dictionary is a collection of words and their definitions, synonyms, pronunciations, etc.

NEW QUESTION # 34

Insert the code boxes in the correct positions in order to build a line of code which asks the user for an integer value and assigns it to the depth variable.

(Note: some code boxes will not be used.)

The image shows a Python Institute logo on the right, which includes the text "PYTHON INSTITUTE" and "Open Education & Development Group". On the left is a drag-and-drop interface with a vertical list of code boxes on the far left and a horizontal sequence of boxes on the right. The vertical boxes contain the following code snippets: `input(`, `)`, `"Enter immersion depth:" )`, `--`, `int(`, `-`, and `float(`. The horizontal boxes contain: `depth =`, `int("Enter immersion dept. ")`, and `float("Enter immersion dept. ")`. A watermark "latestcram.com" is visible across the interface.

Answer:

Explanation:

The image shows the same Python Institute logo and drag-and-drop interface as above. In this version, the code boxes are arranged to form the correct line of code: `depth = int("Enter immersion dept. ")`. The boxes `int("Enter immersion dept. ")` and `float("Enter immersion dept. ")` are highlighted with a red dashed border. A watermark "latestcram.com" is visible across the interface.

Explanation:

One possible way to insert the code boxes in the correct positions in order to build a line of code which asks the user for an integer value and assigns it to the depth variable is:

```
depth = int(input("Enter the immersion depth: "))
```

This line of code uses the input function to prompt the user for a string value, and then uses the int function to convert that string value into an integer number. The result is then assigned to the variable depth.

You can find more information about the input and int functions in Python in the following references:

* [Python input() Function]

* [Python int() Function]

NEW QUESTION # 35

.....

You can also use the PCEP - Certified Entry-Level Python Programmer PDF format using smartphones, tablets, and laptops. Since the PDF format of real dumps questions is portable, you can access it from any place in free time. The PCEP - Certified Entry-Level Python Programmer web-based practice exam can be easily taken from every browser and operating system without installing additional software. The desktop PCEP - Certified Entry-Level Python Programmer practice exam software comes with all specs of the Python Institute PCEP-30-02 web-based version but it works offline only on Windows computer or laptop.
