B2C-Commerce-Architect Exam is available in English, Japanese, and Spanish language.

Salesforce Certified B2C Commerce Architect Sample Questions (Q14-Q19):

NEW QUESTION # 14

A company that is a shoe-producer is doing Salesforce B2C Commerce implementation. In their Enterprise Resource Warning (ERP) system, the products are marked as being one of three types: boots, sandals, and sneakers. The business requirements based on the type are:

- * The messaging on Product Detail page is different
- * Customers are able to filter their Product Search Results

The customer's operations team asks about the format in which to send this value in the catalog. Which data type should the Architect specify for this attribute In the Data Mapping document?

- A. A custom attribute of type enum-of-string (single selectable value)
- B. A custom attribute type set-of-string containing multiple values.
- C. A custom attribute of type string containing comma separated values.
- D. A custom attribute of type enum-of-string (multiselect able value).

Answer: A

NEW QUESTION # 15

An existing B2C Commerce site has the following aliases configuration:

```
"www.example.com": [  
  {  
    "locale": "en_US",  
  },  
  {  
    "locale": "de_DE",  
    "if-site-path": "de"  
  },  
  {  
    "locale": "en_US",  
    "if-site-path": "us"  
  },  
  {  
    "locale": "en_GB",  
    "if-site-path": "uk"  
  },  
],  
"www.example.de": [{  
  "host": "www.example.com",  
  "path": "de"  
}],  
"www.example.co.uk": [{  
  "host": "www.example.com",  
  "path": "uk"  
}]
```

Which statement related to this configuration is incorrect?

- A. Hostname www.example.de will redirect to www.example.com/de.
- B. Hostname www example.co.uk will redirect to www.example.com/uk.

- C. Site supports multiple hostnames and locales.
- D. Hostname `www.example.com` will redirect to `www.example.com/us`

Answer: D

Explanation:

In the provided configuration, the incorrect statement is B. While it appears that the hostname `www.example.com` should redirect to `www.example.com/us` based on the "if-site-path": "us" entry, this assumes that the default path or redirect isn't overridden by other configurations within the hostname alias file not visible in the snapshot provided. Typically, in Salesforce B2C Commerce, such a direct statement about redirection should align with explicit mapping rules that include hostname and path directives, which are not detailed for `www.example.com` to `www.example.com/us` in the snippet provided. This absence suggests that the statement may be incorrect unless corroborated by additional detailed mappings in the full configuration file.

NEW QUESTION # 16

Which method is efficient and scalable because it uses the product search index rather than searching the database?

- A. `ProductIndexModel.getOrderableProductsOnly()`
- B. `ProductSearchModel().getProductSearchHits()`
- C. `ProductAvailabilityModel.isOrderable()`
- D. `ProductVariantModel.getVariants()`

Answer: B

NEW QUESTION # 17

An Order Management System (OMS) handles orders from multiple brandspecific sites, as part of the processing, the OMS sends the processing detail to be added as notes to the orders in B2C Commerce. These processing details are captured temporarily in custom objects, and are later processed by a batch Job that:

- * Processes the custom object to extract the orderid and note data.
- * Tries to load the order.
- * If the order is not found, it deletes the custom object and moves on.
- * If the order is found, it updates notes In the Order, upon successful update of this order, it deletes the custom object.

There is an Issue reported that the job is constantly failing and custom objects are growing in number. On investigating the production log the message below is being logged on each failure:

```
Processing of custom object 1x0skncjdw687769 failed for order 3000000001 and has an associated replacement order 1000000001. Exception details: com.demandware.core.quota.QuotaLimitExceededException: Limit for quota 'object.OrderPO.relation.notes' exceeded. Limit is 1000, actual is 1001. at com.demandware.core.quota.QuotaExceededException.throwLimitExceed(QuotaExceededException.java:21) at com.demandware.core.quota.QuotaImpl.enforceLimitViolation(QuotaImpl.java:333) at
```

What are three solution The Architect can take to fix this issue without losing meaningful data?

Choose 3 answers

- A. Using BM site import/export, softenthe<quota id="object.orderPo.relation.notes"><custom-action>warm<custom-action> </quot>to make sure that neither order notes are lost and custom object is processed.
- B. Take the backup of the Order as XML and delete the Order to ensure on the next job run, the custom objects are getting processed.
- C. Take the backup of the Order as XML and delete the notes from Order to ensure on the next jobrun the custom objects are getting processed.
- D. Take the backup of the custom object and delete the custom object to ensure on the next job run the custom objects are getting processed.
- E. Engage B2C Commerce Support Team to soften the quota limit for "object.OrderPO.relation.notes"

Answer: A,C,E

NEW QUESTION # 18

During code review, the Architect found that there is a service call on every visit of the product detail woe (PDP).

What best practices should the Architect ensure are followed for the service configuration?
Choose 2 answers

- A. Circuit breaker is enabled.
- **B. Service mock up call is configured.**
- C. Service logging is disabled.
- D. Service timeout is set.

Answer: B

Explanation:

For logging practices in a complex LINK cartridge integration, the recommendation is:

Get logger for cartridge-specific category (C): This practice allows for more precise and relevant logging by focusing on the specific cartridge, making troubleshooting more efficient.

Report debug level message for the back-end asynchronous communication: This ensures that all detailed interactions are logged, providing valuable data for diagnosing issues.

Report all errors at error level message: This categorizes all critical issues under error logs, which is essential for quick identification and resolution of problems affecting the system's operations.

This structured logging strategy enhances the ability to monitor and troubleshoot the system effectively, especially in complex integrations where multiple components interact asynchronously.
