We believe this resulted from our constant practice, hard work and our strong team spirit. With the high class operation system, the DOP-C01 study question from our company has won the common recognition from a lot of international customers for us. If you decide to buy our DOP-C01 test dump, we can assure you that you will pass exam in the near future.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q409-Q414):

NEW QUESTION # 409

An IT department manages a portfolio with Windows and Linux (Amazon and Red Hat Enterprise Linux) servers both on-premises and on AWS. An audit reveals that there is no process for updating OS and core application patches, and that the servers have inconsistent patch levels. Which of the following provides the MOST reliable and consistent mechanism for updating and maintaining all servers at the recent OS and core application patch levels?

- A. Use a shell script to install the latest OS patches on the Linux servers using yum and schedule it to run automatically using cron. Use Windows Update to automatically patch Windows servers.
- B. Install the AWS OpsWorks agent on all on-premises and AWS servers. Create an OpsWorks stack with separate layers for each operating system, and get a recipe from the Chef supermarket to run the patch commands for each layer during maintenance windows.
- C. Use AWS Systems Manager Parameter Store to securely store credentials for each Linux and Windows server. Create Systems Manager Resource Groups. Use the Systems Manager Run Command to remotely deploy patch updates using the credentials in Systems Manager Parameter Store
- **D. Install AWS Systems Manager agent on all on-premises and AWS servers. Create Systems Manager Resource Groups. Use Systems Manager Patch Manager with a preconfigured patch baseline to run scheduled patch updates during maintenance windows.**

Answer: D

Explanation:

1- <https://docs.aws.amazon.com/systems-manager/latest/userguide/sysman-patch-patchgroups.html> 2- <https://docs.aws.amazon.com/systems-manager/latest/userguide/systems-manager-patch.html>

NEW QUESTION # 410

A company is implementing AWS CodePipeline to automate its testing process. The company wants to be notified when the execution state fails and used the following custom event pattern in Amazon CloudWatch:

```

{
  "source": [
    "aws.codepipeline"
  ],
  "detail-type": [
    "CodePipeline Action Execution State Change"
  ],
  "detail": {
    "state": [
      "FAILED"
    ],
    "type": {
      "category": ["Approval"]
    }
  }
}

```

Which type of events will match this event pattern?

- A. All rejected or failed approval actions across all the pipelines.
- B. All the events across all pipelines.
- C. Approval actions across all the pipelines.
- D. Failed deploy and build actions across all the pipelines.

Answer: A

Explanation:

<https://docs.aws.amazon.com/codepipeline/latest/userguide/detect-state-changes-cloudwatch-events.html>

NEW QUESTION # 411

You have an application running a specific process that is critical to the application's functionality, and have added the health check process to your Auto Scaling Group. The instances are showing healthy but the application itself is not working as it should. What could be the issue with the health check, since it is still showing the instances as healthy.

- A. The health check is not checking the application process
- B. It is not possible for a health check to monitor a process that involves the application
- C. You do not have the time range in the health check properly configured
- D. The health check is not configured properly

Answer: A

Explanation:

Explanation

If you have custom health checks, you can send the information from your health checks to Auto Scaling so that Auto Scaling can use this information. For example, if you determine that an instance is not functioning as expected, you can set the health status of the instance to Unhealthy. The next time that Auto Scaling performs a health check on the instance, it will determine that the instance is unhealthy and then launch a replacement instance. For more information on Autoscaling health checks, please refer to the below

document link: from AWS

* <http://docs.aws.amazon.com/autoscaling/latest/userguide/healthcheck.html>

NEW QUESTION # 412

What is the scope of an EC2 security group?

- A. Availability Zone
- **B. VPC**
- C. Placement Group
- D. Region

Answer: B

NEW QUESTION # 413

A defect was discovered in production and a new sprint item has been created for deploying a hotfix. However, any code change must go through the following steps before going into production:

- Scan the code for security breaches, such as password and access key leaks.

- Run the code through extensive, long running unit tests.

Which source control strategy should a DevOps Engineer use in combination with AWS CodePipeline to complete this process?

- A. Create a hotfix branch from the master branch. Trigger the development pipeline from the hotfix branch. Use AWS Lambda to do a content scan and run unit tests. Add a manual approval stage that merges the hotfix branch into the master branch.
- B. Create a hotfix tag on the last commit of the master branch. Trigger the development pipeline from the hotfix tag. Use AWS CodeDeploy with Amazon ECS to do a content scan and run unit tests. Add a manual approval stage that merges the hotfix tag into the master branch.
- C. Create a hotfix branch from the master branch. Create a separate source stage for the hotfix branch in the production pipeline. Trigger the pipeline from the hotfix branch. Use AWS Lambda to do a content scan and use AWS CodeBuild to run unit tests. Add a manual approval stage that merges the hotfix branch into the master branch.
- **D. Create a hotfix branch from the master branch. Trigger the development pipeline from the hotfix branch. Use AWS CodeBuild to do a content scan and run unit tests. Add a manual approval stage that merges the hotfix branch into the master branch.**

Answer: D

Explanation:

We need to create a feature branch to test the fix and codebuild can do both the scan and unit tests.
