Pass Guaranteed Quiz 2025 SPLK-1002: Professional Splunk Core Certified Power User Exam Authorized Test Dumps

To stay updated and competitive in the market you have to upgrade your skills and knowledge level. Fortunately, with the Splunk Core Certified Power User Exam (SPLK-1002) certification exam you can do this job easily and quickly. To do this you just need to pass the Splunk Core Certified Power User Exam (SPLK-1002) certification exam. The Splunk Core Certified Power User Exam (SPLK-1002) certification exam is the top-rated and career advancement Splunk SPLK-1002 certification in the market.

Splunk Core Certified Power User Exam Sample Questions (Q100-Q105):

NEW QUESTION # 100
In what order arc the following knowledge objects/configurations applied?

- A. Lookups, Field Aliases, Field Extractions
- B. Field Extractions, Lookups, Field Aliases
- C. Field Aliases, Field Extractions, Lookups
- D. Field Extractions, Field Aliases, Lookups

Answer: D

Explanation:
Reference:https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/WhatisSplunkknowledge
Knowledge objects are entities that you create to add knowledge to your data and make it easier to search and analyze2. Some examples of knowledge objects are field extractions, field aliases and lookups2. Field extractions are methods that extract fields from your raw data using various techniques such as regular expressions, delimiters or key-value pairs2. Field aliases are ways to assign alternativenames to existing fields without changing the original field names or values2. Lookups are ways to enrich your data with additional information from external sources such as CSV files or databases2. The order in which these knowledge objects/configurations are applied is as follows: field extractions, field aliases and then lookups2. This means that Splunk first extracts fields from your raw data, then applies any aliases to the extracted fields and then performs any lookups on the aliased fields2. Therefore, option B is correct, while options A, C and D are incorrect.

NEW QUESTION # 101
When using multiple expressions in a single eval command, which delimiter is used?

- A. , (comma)
- B. I (pipe)
- C. / (forward slash)
- D. : (colon)

Answer: A

Explanation:
When using multiple expressions in a single eval command in Splunk, the delimiter used is a comma (,). This allows for the execution of multiple operations within a single eval statement, separating each operation clearly.

NEW QUESTION # 102
Using the Field Extractor (FX) tool, a value is highlighted to extract and give a name to a new field. Splunk has not successfully extracted that value from all appropriate events. What steps can be taken so Splunk successfully extracts the value from all appropriate events? (select all that apply)

- A. Select an additional sample event with the Field Extractor (FX) and highlight the missing value in the event.
- B. Re-ingest the data and attempt to extract from a new dataset.
- C. Click on the event where the field was not extracted and choose "Change to Delimited".
- D. Edit the regular expression manually.

Answer: A,D

Explanation:
When using the Field Extractor (FX) tool in Splunk and the tool fails to extract a value from all appropriate events, there are specific steps you can take to improve the extraction process. These steps involve interacting with the FX tool and possibly adjusting the extraction method:
A: Select an additional sample event with the Field Extractor (FX) and highlight the missing value in the event. This approach allows Splunk to understand the pattern better by providing more examples. By highlighting the value in another event where it wasn't extracted, you help the FX tool to learn the variability in the data format or structure, improving the accuracy of the field extraction.
D: Edit the regular expression manually. Sometimes the FX tool might not generate the most accurate regular expression for the field extraction, especially when dealing with complex log formats or subtle nuances in the data. In such cases, manually editing the regular expression can significantly improve the extraction process.
This involves understanding regular expressionsyntax and how Splunk extracts fields, allowing for a more tailored approach to field extraction that accounts for variations in the data that the automatic process might miss.
Options B and C are not typically related to improving field extraction within the Field Extractor tool. Re- ingesting data (B) does not directly impact the extraction process, and changing to a delimited extraction method (C) is not always applicable, as it depends on the specific data format and might not resolve the issue of missing values across events.

NEW QUESTION # 103
When should transaction be used?

- A. When grouping events results in over 1000 events in each group.
- B. Only in a large distributed Splunk environment.
- C. When calculating results from one or more fields.
- D. When event grouping is based on start/end values.

Answer: C

Explanation:

NEW QUESTION # 104
Which of the following searches show a valid use of a macro? (Choose all that apply.) index=main source=mySource oldField=* |'makeMyField(oldField)'| table _time

- A. | table _time newField
- B. table _time newField
  index=main source=mySource oldField=* | '"newField('makeMyField(oldField)')"'
- C. table _time newField
  index=main source=mySource oldField=* | eval newField='makeMyField(oldField)'|
- D. newField
  index=main source=mySource oldField=* | stats if('makeMyField(oldField)') |

Answer: C,D
