CRT-450 Examcollection Free Dumps & CRT-450 Exam Dumps Provider

If you search test practice questions you can find us which is the leading position in this field or you may know us from other candidates about our high-quality CRT-450 training materials as every year thousands of candidates choose us and gain success for their exams. If you want to choose reliable and efficient Latest CRT-450 Questions and answers, we will be your best choice as we have 100% pass rate for CRT-450 exams. Many candidates prefer simulator function of our CRT-450 training materials. And our CRT-450 exam questions won't let you down.

Salesforce Certified Platform Developer I Sample Questions (Q10-Q15):

NEW QUESTION # 10

A developer in a Salesforce org with 100 Accounts executes the following code using the Developer console:
`Account myAccount = new Account(Name = 'MyAccount'); Insert myAccount; For (Integer x = 0; x < 150; x++) {Account newAccount = new Account (Name='MyAccount' + x); try {Insert newAccount;} catch (Exception ex) {System.debug(ex);}} insert new Account (Name='myAccount');`
How many accounts are in the org after this code is run?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

NEW QUESTION # 11

A developer has the following code:
`try {List nameList; Account a; String s = a.Name; nameList.add(s);} catch (ListException le) {System.debug(' List Exception ');} catch (NullPointerException npe) {System.debug(' NullPointerException ');} catch (Exception e) {System.debug(' Generic Exception ');}`
What message will be logged?

- A. Generic Exception
- B. List Exception
- **C. NullPointerException**
- D. No message is logged

Answer: C

NEW QUESTION # 12

What should a developer use to script the deployment and unit test execution as part of continuous integration?

- A. VS Code
- **B. Salesforce CLI**
- C. Developer Console
- D. Execute Anonymous

Answer: B

Explanation:

Salesforce CLI allows developers to automate deployments and run unit tests as part of a continuous integration (CI) pipeline. It is the most efficient tool for scripting these processes.

Reference: Salesforce CLI

Incorrect Options:

A: VS Code is an IDE and requires CLI integration for scripting.

B: Execute Anonymous is used for running code snippets manually, not for CI.

D: Developer Console is for manual testing and debugging, not CI automation.

NEW QUESTION # 13

A Lightning component has a wired property, `searchResults`, that stores a list of Opportunities. Which definition of the Apex method, to which the `searchResults` property is wired, should be used?

- A. `@AuraEnabled(cacheable=false)`
`public List<Opportunity> search(String term) { /*implementation*/ }`
- B. `@AuraEnabled(cacheable=true)`
`public static List<Opportunity> search(String term) { /* implementation*/ }`
- C. `@AuraEnabled(cacheable=false)`
`public static List<Opportunity> search(String term) { /*implementation*/ }`
- D. `@AuraEnabled(cacheable=true)`
`public List<Opportunity> search(String term) { /*implementation*/ }`

Answer: B

NEW QUESTION # 14

Ursa Major Solar has a custom object, serviceJob-o, with an optional Lookup field to Account called partner-service-Provider__c. The TotalJobs-o field on Account tracks the total number of serviceJob-o records to which a partner service provider Account is related.

What is the most efficient way to ensure that the Total job_o field kept up to data?

- A. Create a schedule-triggered flow on ServiceJob_o.
- B. Create a record-triggered flow on ServiceJob_o.
- C. Create an Apex trigger on ServiceJob_o.
- D. Change TotalJob_o to a roll-up summary field.

Answer: D

Explanation:

The most efficient way to ensure that the TotalJobs__c field on Account is kept up to date is to change it to a roll-up summary field. A roll-up summary field calculates values from related records, such as those in a related list1. In this case, the roll-up summary field on the Account object would count the number of ServiceJob__c records that are related to the Account via the partner_Service_Provider__c Lookup field. This is the simplest and most declarative way to achieve the requirement.

The other options are not valid because:

* Creating a record-triggered flow on ServiceJob__c would require more steps and logic than a roll-up summary field. A record-triggered flow would need to query the related Account record, update the TotalJobs__c field, and handle possible errors2. A record-triggered flow would also consume more system resources and limits than a roll-up summary field.

* Creating an Apex trigger on ServiceJob__c would require more coding and testing than a roll-up summary field. An Apex trigger would need to perform similar operations as a record-triggered flow, but with more complexity and less maintainability3. An Apex trigger would also consume more system resources and limits than a roll-up summary field.

* Creating a schedule-triggered flow on ServiceJob__c would not ensure that the TotalJobs__c field is kept up to date in real time. A schedule-triggered flow runs at a specified time or time interval, which means that the TotalJobs__c field could be outdated between the scheduled runs4. A schedule-triggered flow would also consume more system resources and limits than a roll-up summary field.
