Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.
Topic 2	<ul style="list-style-type: none">Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.
Topic 3	<ul style="list-style-type: none">Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.
Topic 4	<ul style="list-style-type: none">ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.
Topic 5	<ul style="list-style-type: none">SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.

Free PDF Quiz 2025 Professional Salesforce Guaranteed Analytics-DA-201 Passing

We would like to provide our customers with different kinds of Analytics-DA-201 practice guide to learn, and help them accumulate knowledge and enhance their ability. Besides, we guarantee that the Analytics-DA-201 exam questions of all our users can be answered by professional personal in the shortest time with our Analytics-DA-201 Study Dumps. One more to mention, we can help you make full use of your sporadic time to absorb knowledge and information.

Salesforce Certified Tableau Data Analyst Sample Questions (Q96-Q101):

NEW QUESTION # 96

You have the following chart that sorts states by the number of products each state has purchased. Which formula should you use to include a number with the position of each state within each region?

- A. WINDOW_SUM(SUM ([Quantity]))
- B. FIRST ()
- C. LOOKUP (SUM ([Quantity]))
- D. INDEX ()

Answer: D

Explanation:

The LOOKUP function is used to return the value of a specified field in a different row, which can be defined relative to the current row. In this context, it can be used to include a number with the position of each state within each region by looking up the SUM([Quantity]) in each respective position. References: The information is inferred from general Tableau knowledge as well as the following sources:

- * Tableau Functions (Alphabetical)
- * LOOKUP
- * Tableau Certified Data Analyst Exam Guide

NEW QUESTION # 97

You have the following dataset:

Name
Charles Sheldon
charles.sheldon
Sheldon charles
Charles.Sheldon
Charles Sheldon

Which grouping option should you use in Tableau Prep to group all five names automatically?

- A. Spelling
- B. Pronunciation
- C. Manual Selection
- D. Common Characters

Answer: D

Explanation:

Common Characters: Find and group values that have letters or numbers in common. This option uses the ngram fingerprint algorithm that indexes words by their unique characters after removing punctuation, duplicates, and whitespace. This algorithm works for any supported language. This option isn't available for data roles. For example, this algorithm would match names that are represented as "John Smith" and "Smith, John" because they both generate the key "hijmno". Since this algorithm doesn't consider pronunciation, the value "Tom Jhinois" would have the same key "hijmno" and would also be included in the group.

NEW QUESTION # 98

You create the following story that contains two story point.

You want to change the story point format to show the current story point number out of the total number of story points. Which Layout option should you use?

- A. Numbers
- B. Arrows only
- C. Caption boxes
- D. Dots

Answer: A

Explanation:

To change the story point format to show the current story point number out of the total number of story points, you should use the Numbers option in the Layout tab. This option will display the story points as numbers in a horizontal or vertical sequence, such as 1/2, 2/2. You can also choose to show or hide the next and previous arrows for navigation. The Numbers option will help you indicate the progress and order of your story points more clearly than the other options. References:

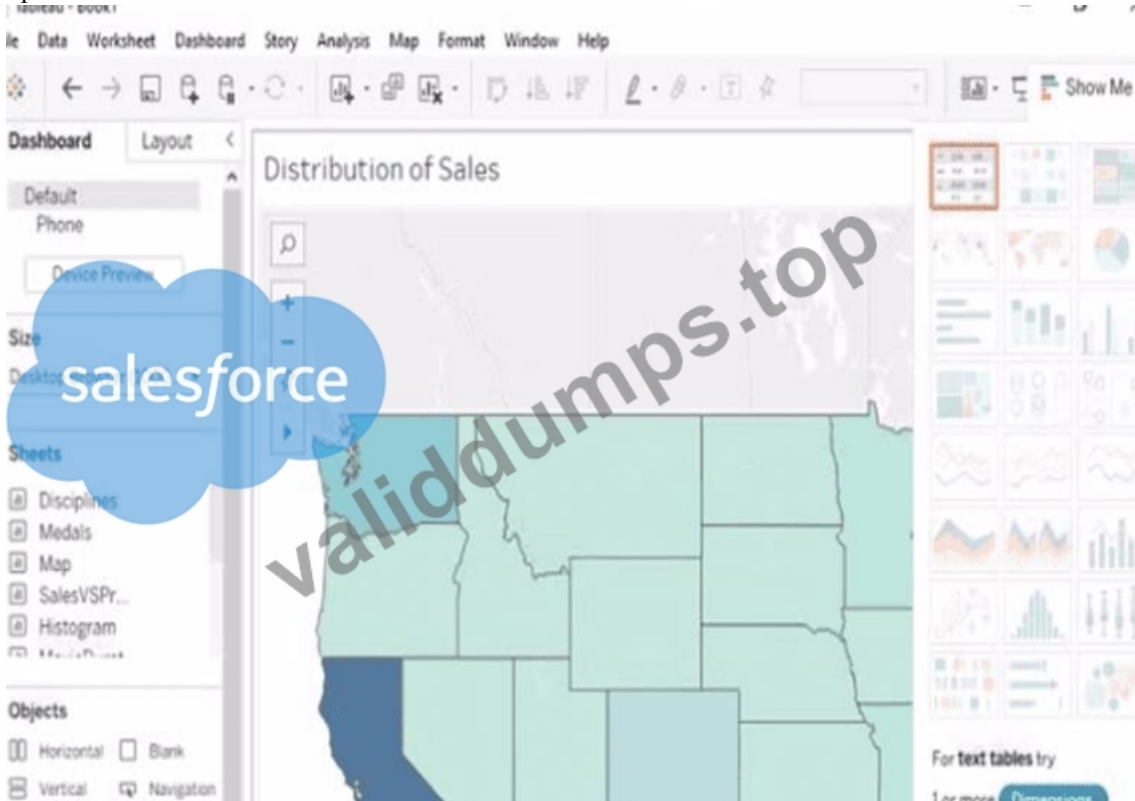

* Creating a Story - Tableau

* New in 9.0: Formatting the Story Points Navigator - Tableau

* Tableau Certified Data Analyst Study Guide

NEW QUESTION # 99

Open the link to Book1 found on the desktop. Use the Superstore data source. Split the Customer Name field into two fields named First Name and Last Name.

Answer:

Explanation:

check the steps below in explanation.

Explanation:

To split the Customer Name field into two fields named First Name and Last Name, you need to do the following steps:

* Open the link to Book1 found on the desktop. This will open the Tableau workbook that uses the Superstore data source.

* Go to the Data Source tab at the bottom of the workbook to see the data source page. You will see a table that shows the fields and values from the Superstore data source.

* Right-click on Customer Name in the table and select Split from the menu. This will split the field into two fields based on a separator, which is a space by default. You will see two new fields named Customer Name - Split 1 and Customer Name - Split 2 in the table.

* Right-click on Customer Name - Split 1 and select Rename from the menu. Type First Name as the new name and press Enter. This will rename the field as First Name.

* Right-click on Customer Name - Split 2 and select Rename from the menu. Type Last Name as the new name and press Enter. This will rename the field as Last Name.

NEW QUESTION # 100

You have the following dataset.

Name
Charles Sheldon
charles,sheldon
Sheldon charles
Charles Sheldon
Charles_Sheldon

Which grouping option should you use in Tableau Prep to group all five names automatically?

- A. Pronunciation
- B. Common Characters
- C. Spelling
- D. Manual Selection

Answer: C

Explanation:

Tableau Prep's Grouping feature includes various methods to group similar data. The Spelling option is used when the data has small variations in spelling, such as capitalization differences or common typos. Given that the names in the dataset vary in capitalization and punctuation but are spelled correctly, the Spelling grouping option would be the most appropriate choice to automatically group all five names.

NEW QUESTION # 101

.....

By focusing on how to help you more effectively, we encourage exam candidates to buy our Analytics-DA-201 study braindumps with high passing rate up to 98 to 100 percent all these years. Our experts designed three versions for you rather than simply congregate points of questions into Analytics-DA-201 real questions.
