EMC D-PVM-OE-01 Exam Syllabus Topics:

Topic	Details
Topic 1	• PowerMaxOS 10 Data Mobility: This section of the exam measures the skills of Data Migration Specialists and covers data mobility and migration features in PowerMaxOS 10. Candidates must understand the benefits of non-disruptive migration and be able to perform migrations using Unisphere for PowerMax. One key skill assessed is executing non-disruptive data migrations.
Topic 2	• Solutions Enabler 10 Implementation: This section of the exam measures the skills of Infrastructure Engineers and focuses on the fundamentals of Solutions Enabler. Candidates must understand its installation, upgrade processes, gatekeeper management, and daemon functions across different platforms. One crucial skill tested is managing Solutions Enabler daemons.
Topic 3	• Unisphere for PowerMax 10 Implementation and Administration: This section of the exam measures the skills of System Administrators and covers the implementation and management of Unisphere for PowerMax. Candidates must understand the installation process, post-installation tasks, and interface navigation to efficiently operate the platform. One key skill evaluated is setting up Unisphere for PowerMax.
Topic 4	• PowerMax Family Business Continuity Administration: This section of the exam measures the skills of Disaster Recovery Engineers and focuses on replication technologies used for business continuity. Candidates must perform SnapVX and Clone operations using Unisphere for PowerMax and understand Symmetrix Remote Data Facility (SRDF) replication. They must also execute SRDF operations using Unisphere and SYMCLI.

Topic 5	• PowerMax Family Storage Provisioning: This section of the exam measures the skills of Storage Administrators and covers the architecture, configurations, and management of the PowerMax family. Candidates must understand system models, port and device management, and provisioning methods using Unisphere for PowerMax. They are expected to perform service level-based provisioning and allocate storage through auto-provisioning groups. One key skill assessed is configuring storage using Unisphere for PowerMax.
Topic 6	• PowerMax Family Monitoring and Workload Planning: This section of the exam measures the skills of Performance Analysts and focuses on monitoring storage environments and workload planning using Unisphere for PowerMax. Candidates must understand how to track performance metrics, detect issues, and optimize workloads to enhance storage efficiency. One key skill tested is monitoring storage health through Unisphere.
Topic 7	• PowerMax Family Local and Remote Replication Concepts: This section of the exam measures the skills of Backup and Recovery Specialists and covers the features and functionalities of TimeFinder SnapVX. Candidates must differentiate between SnapVX snapshots and clones while understanding their role in data protection. One key skill assessed is comparing the use cases of snapshots and clones.

EMC Dell Technologies PowerMax Operate Sample Questions (Q108-Q113):

NEW QUESTION # 108
Which product(s) support(s) only 7+1 in RAID 5 configurations?

- A. VMAX All Flash
- B. VMAX All Flash and PowerMax 8000
- C. VMAX3
- D. VMAX All Flash and PowerMax 2000

Answer: B

NEW QUESTION # 109
Refer to the exhibit.

What is the Unisphere for PowerMax deployment option pictured?

- A. Local
- B. Embedded
- C. Remote
- D. Either remote or local

Answer: C

Explanation:
Step by Step Comprehensive Detailed Explanation:
Unisphere for PowerMax offers different deployment options to manage PowerMax storage arrays. Based on the exhibit, we can identify the following:
* Separate SYMAPI Server:The diagram shows a dedicated SYMAPI server. SYMAPI (Symmetrix Application Programming Interface) is a command-line interface used to manage PowerMax and VMAX storage arrays. This indicates that the Unisphere server is not directly connected to the storage arrays.
* Unisphere Server Connected to SYMAPI Server:The Unisphere server is shown to be connected to the SYMAPI server. This means that the Unisphere server relies on the SYMAPI server to communicate with the PowerMax arrays.
* No Direct Connection to Arrays:The Unisphere server does not have a direct connection to the PowerMax arrays.
Considering these points, the deployment option depicted in the exhibit is aremote deployment. In a remote deployment, the Unisphere server is installed on a separate host and communicates with the PowerMax arrays through a SYMAPI server. This allows for centralized management of multiple arrays from a single Unisphere instance.
Why other options are incorrect:
* A. Embedded:In an embedded deployment, the Unisphere software runs directly on the PowerMax array itself. This eliminates the need for a separate Unisphere server.
* B. Either remote or local:While the diagram could technically represent a local deployment with a dedicated SYMAPI server, the presence of the separate SYMAPI server and the lack of direct connection to the arrays strongly suggest a remote deployment.
* D. Local:In a local deployment, the Unisphere server is typically installed on the same host as Solutions Enabler, which has direct connectivity to the storage arrays.

It also includes diagrams and explanations of each deployment scenario. You can find this document on the Dell Support website by searching for "Unisphere for PowerMax Installation Guide."
* Dell PowerMax Family: Essentials and Best Practices Guide:This guide offers a general overview of PowerMax systems and their management using Unisphere. It may provide context for understanding the different deployment options.

NEW QUESTION # 110
The customer has successfully completed a Non-Disruptive Migration.
Use the simulator to verify migration sessions and remove the migration environment.

Answer:

Explanation:
See the explanation for step by step solution.
Explanation:
Okay, I understand. The task is to verify the completion of Non-Disruptive Migrations (NDM) and then remove the migration environment using the Unisphere for PowerMax simulator.
Here's a step-by-step guide on how to do this, based on typical Unisphere functionality and the context of the question:
Steps:
1. Launch the Simulator and Navigate to the Migration Section
* Open Unisphere for PowerMax in your web browser.
* Log in to the simulator.
* In the left-hand navigation pane, locate the section related to migrations. This is usually under either:
* Data Mobility
* Migration
* Expand the relevant section and click onMigrations(or a similar option like "Local Migrations" or
"NDM"). This will take you to the view where you can manage Non-Disruptive Migrations.
2. Verify Migration Session Status
* The Migrations view will list all current and past migration sessions.
* Look for the following status indicators to confirm that the migrations have completed successfully:
* Status:The status should typically be "Completed," "Cutover Complete," or a similar status indicating successful completion.
* Progress:If a progress bar or percentage is shown, it should be at 100% or show that all data has been synchronized.
* Important:If any sessions are still in a "Running," "Synchronizing," or other non-completed state, do not proceed with removing the
migration environment. Wait for them to complete.
3. Select Completed Migrations for Removal
* Once you've verified that all relevant migration sessions are successfully completed, select the sessions that you want to remove.
* You can usually select sessions by:
* Clicking a checkbox next to each session.
* Clicking on the session itself (if the interface allows it).
4. Remove the Migration Environment
* After selecting the completed migration sessions, look for an action button or menu option to remove them. This might be labeled:
* "Remove"

* "Delete"
* "Cleanup"
* "Remove Session"
* Click the appropriate button to initiate the removal process.
* Confirmation:You will likely be prompted with a confirmation message to make sure you want to remove the selected migration sessions. Verify that you have selected the correct sessions and confirm the removal.
5. Verify Removal (Optional)
* After the removal operation completes, the Migrations view should refresh.
* Verify that the migration sessions you removed are no longer listed.

NEW QUESTION # 111

An administrator is using Unisphere for PowerMax Workload Planner to assess the performance and compliance of a PowerMax Storage Group (SG).
How does the Planner calculate if the Storage Group workload is fully compliant?

- A. Weighted SG average response time for the past 4 hours and past one week
- B. Weighted SG average response time for the past 8 hours and past one week
- C. Weighted SG average response time for the past 4 hours and past two weeks
- D. Weighted SG average response times for the past 30 minutes

Answer: C

NEW QUESTION # 112

Which operation is used to perform Open Replicator migrations with minimal application down time?

- A. Hot push
- B. Hot pull
- C. Cold pull
- D. Cold push

Answer: B
