At QuestionsTube, you can read C1000-130 free demo questions in pdf file, so you can check the questions and answers before deciding to download the IBM C1000-130 practice questions. These free demo questions are parts of the C1000-130 exam questions. Download and read them carefully, you will find that the C1000-130 test questions of QuestionsTube will be your great learning materials online. Share some C1000-130 exam online questions below.

1.Red Hat OpenShift GitOps organizes the deployment process around repositories.

P.S. Free & New C1000-130 dumps are available on Google Drive shared by Real4Prep: <https://drive.google.com/open?id=1mQakmzz-UhRANRVOySMX3VRreqxYG-7c>

The C1000-130 test prep mainly help our clients pass the C1000-130 exam and gain the certification. The certification can bring great benefits to the clients. The clients can enter in the big companies and earn the high salary. You may double the salary after you pass the C1000-130 Exam. If you own the certification it proves you master the C1000-130 quiz torrent well and you own excellent competences and you will be respected in your company or your factory. If you want to change your job it is also good for you.

To prepare for the C1000-130 exam, IBM recommends that candidates have a solid understanding of IBM Cloud Pak for Integration and its components. They should also have experience with Linux operating systems, containerization technologies such as Docker and Kubernetes, and integration technologies such as IBM App Connect and IBM MQ. IBM offers a variety of training resources, including instructor-led courses, self-paced learning modules, and practice exams to help candidates prepare for the exam.

IBM C1000-130 (IBM Cloud Pak for Integration V2021.2 Administration) Certification Exam is designed for professionals who are interested in validating their skills and knowledge in administering IBM Cloud Pak for Integration V2021.2. C1000-130 exam is intended for administrators who have experience in working with IBM Cloud Pak for Integration and are responsible for configuring, deploying, and managing the solution.

C1000-130 Exam Sample Questions, Latest C1000-130 Practice Questions

It is quite clear that let the facts speak for themselves is more convincing than any word, therefore, we have prepared free demo in this website for our customers to have a taste of the C1000-130 test torrent compiled by our company. You will understand the reason why we are so confident to say that the C1000-130 Exam Torrent compiled by our company is the top-notch C1000-130 exam torrent for you to prepare for the exam. You can choose to download our free demo at any time as you like, you are always welcome to have a try, and we trust that our C1000-130 exam materials will never let you down.

IBM Cloud Pak for Integration V2021.2 Administration Sample Questions (Q57-Q62):

NEW QUESTION # 57

Which statement is true about the removal of individual subsystems of API Connect on OpenShift or Cloud Pak for Integration?

- A. They cannot be deleted if API Connect was deployed using a single top level CRM.
- **B. They cannot be deleted if API Connect was deployed using a single top level CR.**
- C. They can be deleted regardless of the deployment methods.
- D. They can be deleted if API Connect was deployed using a single top level CR.

Answer: B

Explanation:

Explanation

NEW QUESTION # 58

When considering storage for a highly available single-resilient queue manager, which statement is true?

- A. A single resilient queue manager takes much longer to recover than a multi instance queue manager
- B. Persistent volumes are not supported for a resilient queue manager.
- C. To tolerate an outage of an entire availability zone, cloud storage which replicates across two other zones must be used.
- **D. A shared file system must be used that provides data write integrity, granting exclusive access to file and release locks on failure.**

Answer: D

Explanation:

In IBM Cloud Pak for Integration (CP4I) v2021.2, when deploying a highly available single-resilient queue manager, storage considerations are crucial to ensuring fault tolerance and failover capability.

A single-resilient queue manager uses a shared file system that allows different queue manager instances to access the same data, enabling failover to another node in the event of failure. The key requirement is data write integrity, ensuring that only one instance has access at a time and that locks are properly released in case of a node failure.

Option A is correct: A shared file system must support data consistency and failover mechanisms to ensure that only one instance writes to the queue manager logs and data at any time. If the active instance fails, another instance can take over using the same storage.

Option B is incorrect: While cloud storage replication across availability zones is useful, it does not replace the need for a proper shared file system with write integrity.

Option C is incorrect: Persistent volumes are supported for resilient queue managers when deployed in Kubernetes environments like OpenShift, as long as they meet the required file system properties.

Option D is incorrect: A single resilient queue manager can recover quickly by failing over to a standby node, often faster than a multi-instance queue manager, which requires additional failover processes.

NEW QUESTION # 59

An administrator is looking to install Cloud Pak for Integration on an OpenShift cluster. What is the result of executing the following?

```
apiVersion: logging.openshift.io/v1
kind: ClusterLogging
metadata:
  name: logging
  namespace: openshift-logging
spec:
  logStore:
    type: "elasticsearch"
    elasticsearch:
      nodeCount: 1
      storage: {}
      redundancyPolicy: ZeroRedundancy
```

- A. A single node ElasticSearch cluster with no persistent storage.
- B. A single infrastructure node with persisted ElasticSearch.
- C. A single node ElasticSearch cluster with default persistent storage.
- D. A single node ElasticSearch cluster which auto scales when redundancyPolicy is set to MultiRedundancy.

Answer: A

NEW QUESTION # 60

What are the two possible options to upgrade Common Services from the Extended Update Support (EUS) version (3.6.x) to the continuous delivery versions (3.7.x or later)?

- A. Click the Update button on the Details page of the IBM Cloud Pak Foundational Services operator.
- B. Select the Update Common Services option from the Cloud Pak Administration Hub console.
- C. Run the script provided by IBM using links available in the documentation.
- D. Use the OpenShift web console to change the operator channel from stable-v1 to v3.
- E. Click the Update button on the Details page of the common-services operand.

Answer: B,C

NEW QUESTION # 61

An administrator is checking that all components and software in their estate are licensed. They have only purchased Cloud Pak for Integration (CP4I) licenses.

How are the OpenShift master nodes licensed?

- A. CP4I licenses include entitlement for 3 cores of OpenShift per core of CP4I.
- B. OpenShift master nodes do not consume OpenShift license entitlement, so no license is needed.
- C. The administrator will need to purchase additional OpenShift licenses to cover the master nodes.
- D. CP4I licenses include entitlement for the entire OpenShift cluster that they run on, and the administrator can count against the master nodes.

Answer: B

Explanation:

In IBM Cloud Pak for Integration (CP4I) v2021.2, licensing is based on Virtual Processor Cores (VPCs), and it includes entitlement for OpenShift usage. However, OpenShift master nodes (control plane nodes) do not consume license entitlement, because:

OpenShift licensing only applies to worker nodes.

The master nodes (control plane nodes) manage cluster operations and scheduling, but they do not run user workloads.

IBM's Cloud Pak licensing model considers only the worker nodes for licensing purposes.

Master nodes are essential infrastructure and are excluded from entitlement calculations.

IBM and Red Hat do not charge for OpenShift master nodes in Cloud Pak deployments.

Explanation of Incorrect Answers:

A . CP4I licenses include entitlement for the entire OpenShift cluster that they run on, and the administrator can count against the master nodes. → ☐ Incorrect CP4I licenses do cover OpenShift, but only for worker nodes where workloads are deployed. Master nodes are excluded from licensing calculations.

C . The administrator will need to purchase additional OpenShift licenses to cover the master nodes. → ☐ Incorrect No additional OpenShift licenses are required for master nodes.

OpenShift licensing only applies to worker nodes that run applications.

D . CP4I licenses include entitlement for 3 cores of OpenShift per core of CP4I. → ☐ Incorrect The standard IBM Cloud Pak licensing model provides 1 VPC of OpenShift for 1 VPC of CP4I, not a 3:1 ratio.

Additionally, this applies only to worker nodes, not master nodes.
