Free PDF 2025 Apple DEP-2025 –High-quality Sure Pass

Quality should be tested by time and quantity, which is also the guarantee that we give you to provide DEP-2025 exam software for you. Continuous update of the exam questions, and professional analysis from our professional team have become the key for most candidates to Pass DEP-2025 Exam. The promise of "no help, full refund" is the motivation of our team. We will continue improving

DEP-2025 exam study materials. We will guarantee that you you can share the latest DEP-2025 exam study materials free during one year after your payment.

Apple Deployment and Management Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25

When does an MDM server token expire?

- A. When new Terms and Conditions are accepted
- B. When the Managed Apple Account password is changed
- C. Every 12 months
- D. Every 6 months

Answer: C

Explanation:

Server tokens expire annually. The Apple Business Manager User Guide states, "The MDM server token expires every 12 months and must be renewed to maintain enrollment functionality." References:

Apple Business Manager User Guide, "MDM Server Token" section.

Mobile Device Management Protocol Reference, "Token Renewal" section.

NEW QUESTION # 26

Users report slow Wi-Fi after moving from their offices to the conference room. You notice that their devices aren't joining the closer access point. Why don't the devices associate with the closer access point?

- A. Fast roaming isn't turned on for the wireless access controller.
- B. The trigger thresholds aren't properly configured in the Wi-Fi profile.
- C. The signal strength hasn't met the device's trigger threshold.
- D. The broadcast signal of the first access point has a higher maximum data rate.

Answer: C

Explanation:

Devices wait for a threshold drop. The Apple Platform Deployment Guide states, "Apple devices use a roaming trigger threshold; they won't switch to a closer access point until the current signal falls below this level." Reference:

Apple Platform Deployment Guide, "Wi-Fi Roaming" section.

macOS Deployment Reference, "Network Behavior" section.

NEW QUESTION # 27

Which feature allows administrators to streamline the creation of Managed Apple IDs based on existing Google Workspace or Azure AD data?

- A. Federated Authentication
- B. SAML
- C. Active Directory
- D. MSCHAPv2

Answer: A

Explanation:

Federated Authentication allows administrators to link Apple School Manager or Apple Business Manager with identity providers like Google Workspace or Azure AD, streamlining Managed Apple ID creation by syncing user data (e.g., names, emails). Users can then sign in with their existing credentials, leveraging SSO. MSCHAPv2 (option A) is a VPN authentication protocol, not related to ID creation. Active Directory (option C) is an IdP but not the feature itself. SAML (option D) is a protocol used in federation, but "Federated Authentication" is the broader Apple feature. The Apple Platform Deployment Guide details this process.

NEW QUESTION # 28

Where are bypass codes for Apple devices stored when you use organization-linked Activation Lock?

- A. In the user's personal Apple Account
- B. In Apple Business Manager or Apple School Manager
- C. In the user's Managed Apple Account
- **D. In the MDM solution**

Answer: D

Explanation:

Bypass codes are stored in MDM for organization-linked Activation Lock. The Apple Platform Deployment Guide states, "Bypass codes for organization-linked Activation Lock are stored in the MDM solution, allowing administrators to unlock devices without user credentials." Reference:

Apple Platform Deployment Guide, "Activation Lock" section.

Mobile Device Management Protocol Reference, "Activation Lock Management" section.

NEW QUESTION # 29

You're planning an Apple content caching infrastructure, and you want to optimize the local network traffic. Which is the best strategy?

- A. Use an MDM restriction to prevent content caching from being turned off for every user's managed Mac.
- B. Use the Content Caching payload to enable authenticated content caching.
- C. Use AssetCacheManagerUtil loadcache to preload commonly downloaded apps every night.
- **D. Use an MDM restriction to prevent content caching from being turned on for every user's managed Mac.**

Answer: D

Explanation:

Apple's Content Caching service is powerful for bandwidth optimization, but unmanaged deployments can cause inefficiencies if every user enables caching on their Mac. Apple Learning recommends controlling this centrally. The best strategy is to use an MDM restriction to prevent content caching from being turned on for every user's managed Mac, ensuring only designated caching servers (such as Mac mini or lab servers) perform this role. This prevents network fragmentation where multiple unmanaged caches might compete or misdirect traffic. AssetCacheManagerUtil can preload content but does not scale efficiently. Authenticated content caching is for restricting access, not optimizing traffic. Preventing user-enabled caching maintains centralized control, ensuring caching infrastructure is efficient, secure, and optimized across the organization's subnets.

References: Apple Platform Deployment - "Best practices for managing Content Caching."

NEW QUESTION # 30

.....

Everyone is not willing to fall behind, but very few people take the initiative to change their situation. Take time to make a change and you will surely do it. Our DEP-2025 actual test guide can give you some help. Our company aims to help ease the pressure on you to prepare for the exam and eventually get a certificate. Obtaining a certificate is equivalent to having a promising future and good professional development. Our DEP-2025 Study Materials have a good reputation in the international community and their quality is guaranteed. Why don't you there have a brave attempt? You will certainly benefit from your wise choice.
