Resources to Prepare for This Exam

Several self-study materials are available online to help you prepare for your CAP validation confidently. The vendor itself has some wonderful assets, such as classroom-based training, online instructor-led training, and private on-site training. In addition to this, there are some top-rated books that you can refer to while studying for your CAP:

- **Certified Authorization Professional (CAP) by Valintine Tata and George Nformi**

This study guide is an operational catalog intended for those candidates who want to pass the CAP certification exam in one go. The book comprises 250 multiple-choice questions with four answer alternatives. The authors cover key concepts and domains for the CAP review, including the study of known vulnerabilities or weaknesses in the protection system, the

comprehension of configuration management systems, the assembling of security authorization packages, and the identification of information system (IS) risks.

- **Certified Authorization Professional (CAP) Last Minute Review by David Boone**

This book covers 100% of all seven domains in the CAP Exam and is ideal for specialists with expertise in cloud computing and security. Also, it clearly outlines the processes of OMB/FISMA/NIST and more. The purpose of such a material is to gather the essential components that are required for the success of the CAP test, which is appropriate for the final squeezing minutes.

- **3rd Edition of the CISSP and CAP Guide by Ronald L. Krutz and Russell Dean Vines**

This guide provides value-added coverage for the CAP test. It will prepare you for the CAP with a revised overview of each of the seven domains and support modern methods, specifically in the context of cyber-terrorism prevention and disaster recovery. Moreover, such a book accompanies you on various CAP topics such as RMF and System Development Life Cycle (SDLC) integration, roles and responsibilities in the authorization processes, enterprise program management controls, and understanding regulatory & legal requirements.

- **2nd Edition of the Official (ISC)2 Guide to the CAP CBK by Patrick D. Howard**

The book investigates the wide spectrum of system security authorization processes and discusses how they interact. Also, the author elaborates on different types of IT authorization and security controls, such as the selection and adaptation of security controls, the development of security monitoring strategies, and the implementation of selected security controls. Moreover, such a manual provides a case study on the implementation of an effective system authorization program in the major U.S. government agency.

The SecOps Group Certified AppSec Practitioner Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which of the following is correct?

- A. The browser contains both the public and private key of all known Certifying Authorities (CA) and based on that it is able to differentiate between a valid and an invalid TLS Certificate
- **B. The browser contains the public key of all known Certifying Authorities (CA) and based on that it is able to differentiate between a valid and an invalid TLS Certificate**
- C. The browser does not have any mechanism to validate the TLS Certificate
- D. The browser contains the private key of all known Certifying Authorities (CA) and based on that, it differentiates between a valid and an invalid TLS Certificate

Answer: B

Explanation:

TLS (Transport Layer Security) certificates are validated by browsers to ensure secure communication.

Browsers maintain a trusted store of public keys from known Certifying Authorities (CAs), which are used to verify the digital signature of a TLS certificate presented by a server. This process involves checking the certificate's signature against the CA's public key to confirm its authenticity and validity. If the signature matches and other criteria (e.g., expiration, revocation) are met, the certificate is deemed valid.

* Option A ("The browser contains the private key..."): Incorrect, as browsers do not contain private keys of CAs; private keys are

kept secret by the CAs themselves.

* Option B ("The browser contains the public key..."): Correct, as browsers use CA publickeys to validate certificates, enabling differentiation between valid and invalid TLS certificates.

* Option C ("The browser contains both the public and private key..."): Incorrect, as browsers only store public keys, not private keys, for security reasons.

* Option D ("The browser does not have any mechanism.."): Incorrect, as browsers have robust mechanisms (via CA public keys) to validate TLS certificates.

The correct answer is B, aligning with the CAP syllabus under "Secure Communication" and "TLS Configuration."References:
