

TOP Exam NS0-005 Introduction - Valid Network Appliance NetApp Technology Solutions Professional Exam - Trustworthy NS0-005 Source

What's more, part of that SureTorrent NS0-005 dumps now are free: <https://drive.google.com/open?id=1tCs75wpExOYk9OXYMXQIMqZYVlx6Djd9>

SureTorrent's experts have simplified the complex concepts and have added examples, simulations and graphs to explain whatever could be difficult for you to understand. Therefore even the average exam candidates can grasp all study questions without any difficulty. Additionally, the NS0-005 Exam takers can benefit themselves by using our testing engine and get numerous real exam like practice questions and answers. They will help them revising the entire syllabus within no time.

SureTorrent has one of the most comprehensive and top-notch Network Appliance NS0-005 Exam Questions. We eliminated the filler and simplified the NetApp Technology Solutions Professional Exam preparation process so you can ace the Network Appliance certification exam on your first try. Our Network Appliance NS0-005 Questions include real-world examples to help you learn the fundamentals of the subject not only for the Network Appliance exam but also for your future job.

>> Exam NS0-005 Introduction <<

Trustworthy NS0-005 Source, NS0-005 Answers Free

The NS0-005 learning materials are of high quality, mainly reflected in the adoption rate. As for our NS0-005 exam question, we guaranteed a higher passing rate than that of other agency. More importantly, we will promptly update our NS0-005 quiz torrent based on the progress of the letter and send it to you. 99% of people who use our NS0-005 Quiz guide has passed the exam and successfully obtained their certificates, which undoubtedly show that the passing rate of our NS0-005 exam question is 99%. So our product is a good choice for you. Choose our NS0-005 learning materials, you will gain a lot and lay a solid foundation for success.

Network Appliance NetApp Technology Solutions Professional Exam Sample Questions (Q44-Q49):

NEW QUESTION # 44

A customer wants to use FabricPool technology with NetApp StorageGRID. All objects must be erasure coded What is the minimum number of sites required to deploy the StorageGRID solution while providing site redundancy?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

FabricPool is an ONTAP feature that tiers inactive data to an object store such as StorageGRID. StorageGRID uses erasure coding to protect data by slicing an object into data fragments and parity fragments, and spreading them across Storage Nodes. To use erasure coding, the storage pool must include three or more sites, or exactly one site. Two sites are not supported. Therefore, the minimum number of sites required to deploy the StorageGRID solution with FabricPool and erasure coding is three.

References = Configuring StorageGRID for FabricPool, What erasure-coding schemes are

NEW QUESTION # 45

A storage administrator wants to expand an existing NetApp ONTAP AFF cluster with cost-effective nearline storage for archiving purposes.

What should the administrator do to accomplish this task?

- A. Upgrade the AFF controllers to a higher system.
- B. Add SSDs to the existing AFF cluster.
- C. Add a new FAS system to the existing AFF cluster.
- D. Expand the cluster with a new AFF system.

Answer: C

Explanation:

= Adding a new FAS system to the existing AFF cluster is a way to expand the storage capacity with cost-effective nearline storage for archiving purposes. A FAS system can use HDDs as the performance tier and tier cold data to cloud object storage using FabricPool, which is a NetApp data tiering technology that reduces the amount of physical capacity taken up by data. This way, the administrator can leverage the storage efficiencies of ONTAP and the low-cost storage of the cloud to archive data that is not frequently accessed. The AFF and FAS systems can be managed by the same ONTAP cluster and provide seamless data access and protection.

References = Storage Efficiencies - NetApp, Data Archiving: Cost-Effective Cloud Storage - NetApp, AFF Systems and Cloud Volumes ONTAP | NetApp.

NEW QUESTION # 46

A customer wants to use a NetApp pay-as-you-grow storage-as-a-service (STaaS) offering for their critical NFS and FCP data. Which option meets this requirement?

- A. Cloud Volumes ONTAP
- B. Astra Control
- C. Keystone
- D. Azure NetApp Files

Answer: C

Explanation:

Keystone is NetApp's pay-as-you-grow, storage-as-a-service (STaaS) offering that delivers a seamless hybrid multicloud experience for customers who prefer opex consumption models to upfront capex or leasing. Keystone provides storage capacity at predefined service levels for block, file, and object data types that can be deployed on-premises or in the cloud. Keystone supports both NFS and FCP protocols for file and block data access. Keystone allows customers to align economics and operations to their business priorities and reallocate storagespending across any public clouds.

References = NetApp Keystone storage as a service for the hybrid cloud, Storage as a Service - STaaS | NetApp, Learn about NetApp Keystone

NEW QUESTION # 47

A company has a large data set that is used at many branch offices worldwide. An administrator needs a solution to save frequently used data locally and centrally lock files for real-time collaboration.

Which two NetApp solutions can be used to meet these requirements? (Choose two.)

- A. FlexCache
- B. BlueXP edge caching
- C. SnapLock Enterprise
- D. BlueXP copy and sync

- E. Cloud Volumes Service

Answer: A,B

Explanation:

B). BlueXP edge caching: Similar to FlexCache, BlueXP edge caching is designed to extend data fabric by caching data from a centralized data store to edge locations, such as branch offices. It allows for efficient access to frequently used data and can help improve performance for users at remote sites by caching data closer to where it's used.

C). FlexCache: FlexCache is a feature in NetApp ONTAP that enables the creation of a cache volume on a secondary system to provide faster access to a subset of data. This is particularly useful for scenarios where there is a need to access frequently used data across multiple locations. FlexCache can help in reducing latency and bandwidth costs by caching data locally at each branch office while maintaining a central source of truth.

NEW QUESTION # 48

A company requires all production NAS data to be replicated to a different physical location in case of a natural disaster. The solution must replicate access configurations and local users and groups.

Which NetApp solution meets these requirements?

- A. FlexClone technology
- **B. SVM DR**
- C. Snapshot technology
- D. SnapMirror Business Continuity (SMBC)

Answer: B

Explanation:

= SVM DR is a solution that provides disaster recovery capability at the granularity of SVM, by enabling the recovery of data present in the constituent volumes of the SVM and the recovery of SVM configuration. SVM DR replicates access configurations and local users and groups, as well as data protection policies, export policies, and network configurations. SVM DR can be used to protect NAS data from a natural disaster by replicating it to a different physical location.
