DOWNLOAD the newest TopExamCollection FCP_FAZ_AD-7.4 PDF dumps from Cloud Storage for free:
<https://drive.google.com/open?id=1lilngNwakMI3NreRht7w1QR6W3hAzOTB>

The clients can download our products and use our FCP_FAZ_AD-7.4 study materials immediately after they pay successfully. Our system will send our FCP_FAZ_AD-7.4 learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our FCP_FAZ_AD-7.4 Guide materials. As long as the clients buy our FCP_FAZ_AD-7.4 training quiz they can immediately use our product and save their time.

Fortinet FCP_FAZ_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	• Device Management: Here, Fortinet network and security analysts are evaluated on their ability to handle devices linked to FortiAnalyzer. This includes adding new devices, managing them efficiently, and troubleshooting communication issues.
Topic 2	• System Configuration: This section assesses the capabilities of network and security analysts in managing FortiAnalyzer systems. It includes tasks like performing initial configurations, setting up high-availability systems, and configuring RAID for storage.
Topic 3	• Logs and Reports Management: This part of the exam measures the candidate's ability to handle log data and generate reports using FortiAnalyzer. Network and security analysts must show proficiency in managing, analyzing, and reviewing logs to ensure effective system monitoring and auditing processes are in place.
Topic 4	• Administration: This section evaluates the ability of network and security analysts to configure administrative access and manage Administrative Domains (ADOMs). It covers tasks such as setting user permissions, managing backups, and disk quotas, and ensuring secure and efficient management of administrative privileges within FortiAnalyzer systems.

Reliable FCP_FAZ_AD-7.4 Test Forum & Advanced FCP_FAZ_AD-7.4 Testing Engine

Our FCP_FAZ_AD-7.4 study materials can provide you with multiple modes of experience, there are three main modes to choose from: PDF, Software and Online. Firstly, the PDF version is printable. Secondly, the Software version of FCP_FAZ_AD-7.4 exam

questions can simulate the real exam environment to give you exam experience more vividly. Thirdly, the online version supports all web browsers so that it can be worked on all the operating systems. And our FCP_FAZ_AD-7.4 Study Materials will help you in a more relaxed learning atmosphere to pass the FCP_FAZ_AD-7.4 exam.

Fortinet FCP - FortiAnalyzer 7.4 Administrator Sample Questions (Q176-Q181):

NEW QUESTION # 176

Which statement correctly describes RAID 10 (1+0) on FortiAnalyzer?

- A. A configuration with four disks, each with 2 TB of capacity, provides a total space of 4 TB.
- B. It combines mirroring striping and distributed parity to provide performance and fault tolerance.
- C. It uses striping to provide performance and fault tolerance.
- D. A configuration with four disks, each with 2 TB of capacity, provides a total space of 2 TB.

Answer: A

Explanation:

RAID 10 combines mirroring (RAID 1) and striping (RAID 0). In a RAID 10 setup with four disks, data is mirrored across two pairs of disks, and those pairs are striped for performance. This results in improved performance and fault tolerance, but the total usable storage is 50% of the total raw storage, meaning four 2 TB disks provide 4 TB of usable space.

NEW QUESTION # 177

Which two statements about high availability (HA) on FortiAnalyzer are true? (Choose two.)

- A. All devices in a FortiAnalyzer HA cluster must run in the same operation mode, either analyzer mode or collector mode.
- B. FortiAnalyzer HA supports synchronization of logs as well as some system and configuration settings.
- C. All devices in a FortiAnalyzer HA cluster must have the same available disk space.
- D. FortiAnalyzer HA active-passive mode can function without VRRP.

Answer: A,B

Explanation:

The two correct statements about high availability (HA) on FortiAnalyzer are:

FortiAnalyzer HA supports synchronization of logs as well as some system and configuration settings.

FortiAnalyzer HA synchronizes both logs and certain system configuration settings between the units in the cluster to ensure consistent operation.

All devices in a FortiAnalyzer HA cluster must run in the same operation mode, either analyzer mode or collector mode.

In an HA cluster, all devices must be configured to operate in the same mode - either analyzer mode or collector mode - to ensure consistency and proper functionality across the cluster.

The other options, such as VRRP, are not required for HA in FortiAnalyzer, and disk space can vary between nodes but may impact log storage capacity.

NEW QUESTION # 178

An administrator, fortinet, can view logs and perform device management tasks, such as adding and removing registered devices. However, administrator fortinet is not able to create a mail server that can be used to send alert emails.

What can be the problem?

- A. fortinet is assigned Restricted_User administrative profile.
- B. A trusted host is configured.
- C. fortinet is assigned the Standard_User administrative profile.
- D. ADOM mode is configured with Advanced mode.

Answer: C

Explanation:

Administrator Fortinet is able to view logs and perform device management tasks such as adding and removing registered devices, but cannot create a mail server to send alert emails. The causes of this problem are: fortinet is assigned a Restricted_User administrative rights profile.

Administrators who are assigned as Restricted_User have restricted access, which may include viewing logs and performing certain device management tasks, but not more advanced administrative functions such as configuring mail servers. Such permission restrictions prevent them from performing configuration changes that require higher permissions.

NEW QUESTION # 179

What happens when a log file saved on FortiAnalyzer disks reaches the size specified in the device log settings?

- A. The log file rolls over and is archived.
- B. The log file is overwritten.
- C. The log file is purged from the database.
- D. The log file is stored as a raw log and is available for analytic support.

Answer: A

Explanation:

NEW QUESTION # 180

Which two methods can you use to restrict administrative access on FortiAnalyzer? (Choose two.)

- A. Fabric connectors to external LDAP servers.
- B. Use administrator profiles.
- C. Configure trusted hosts.
- D. Limit access to specific virtual domains.

Answer: B,C

Explanation:

To restrict administrative access on FortiAnalyzer, two effective methods are using administrator profiles and configuring trusted hosts. Administrator profiles allow for defining the level of access and permissions for different administrators, controlling what each administrator can see and do within the FortiAnalyzer unit. Configuring trusted hosts enhances security by limiting administrative access to specified IP addresses, ensuring that administrators can only connect from approved locations or networks, thus preventing unauthorized access from outside specified subnets or IP addresses.
