

Top Features of DumpsTorrent SAP C_CPI_2506 Real Exam Questions

Immediately after you have made a purchase for our C_CPI_2506 practice dumps, you can download our exam study materials to make preparations for the exams. It is universally acknowledged that time is a key factor in terms of the success of exams. The more time you spend in the preparation for C_CPI_2506 Training Materials, the higher possibility you will pass the exam. As you can see, we have invested big amount of money to give the most convenience for you to get our C_CPI_2506 exam braindumps.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 2	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 3	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 4	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

C_CPI_2506 exam guide & C_CPI_2506 Real dumps & C_CPI_2506 free file

As you can find on our website, there are three different versions of our C_CPI_2506 exam questions: the PDF, Software and APP online. I love the PDF version of C_CPI_2506 learning guide the best. The PDF files carry all the exam questions and answers, and it is printable. Our dedicated expert team keeps the material updated and upgrades the material, as and when required. The C_CPI_2506 Exam PDF file is portable which can be carried away everywhere easily and also it can be printed.

SAP Certified Associate - Integration Developer Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which Sap platform serves as the foundation for SAP' s integration strategy?

- **A. SAP Business Technology Platform (SAP BTP).**
- B. SAP S/4HANA serves as the foundation for SAP' s integration strategy.
- C. SAP Cloud Platform Integration (CPI) serves as the foundation for SAP' s integration strategy.
- D. SAP Netweaver Process Integration (PI) serves as the foundation for SAP' s integration strategy.

Answer: A

Explanation:

SAP's integration strategy is founded on the SAP Business Technology Platform (BTP), which provides:

Integration Suite as the strategic iPaaS for process, data, API, and event-driven integration.

Extension Suite for app extensions.

Database & Data Management for unified data access.

Analytics & AI capabilities.

Other options:

SAP CPI # Now part of Integration Suite, not the overall foundation.

SAP S/4HANA # The digital core ERP, but not the integration platform.

SAP NetWeaver PI/PO # Legacy middleware, replaced strategically by Integration Suite on BTP.

Thus, the foundation of SAP's integration strategy is SAP BTP.

NEW QUESTION # 17

You want to integrate a SOAP adapter into an integration process and enable the adapter to send messages to the integration flow.

Which user role must you set up in the SOAP adapter?

- **A. ESBMessaging send**
- B. MessagingSend
- C. MessagingsendtoCI

Answer: A

Explanation:

To integrate a SOAP adapter into an integration process and enable the adapter to send messages to the integration flow, you must set up the ESBMessaging send user role in the SOAP adapter. The ESBMessaging send user role grants the permission to send messages to the Enterprise Service Bus (ESB) of the Cloud Integration capability. The ESB is responsible for routing and delivering messages between different integration flows and adapters. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 18

Where must you configure an HTTPS inbound adapter with OAuth 2.0 authentication?

- A. In the SAP Integration Suite
- B. In the adapter
- **C. In the integration flow**
- D. In the process runtime

Answer: C

Explanation:

An HTTPS inbound adapter is an adapter that allows an integration flow to receive messages from external systems using the HTTPS protocol. OAuth 2.0 authentication is a method of authentication that allows clients to access protected resources on behalf of a resource owner by obtaining an access token from an authorization server. To configure an HTTPS inbound adapter with OAuth 2.0 authentication, you must do it in the integration flow where you define the adapter settings. You can choose OAuth 2.0 as the authentication type and specify the required parameters, such as client ID, client secret, token URL, scope, and so on. You can also configure additional security options, such as SSL certificate, CSRF protection, and CORS policy. Reference: Using Adapter Inbound Security - SAP Learning, Set Up Inbound OAuth Client Credentials Grant Authentication for Senders Calling Integration

NEW QUESTION # 19

You call the following URL in your browser: [https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet\('HT-1000'\)/ToSalesOrderLineItems](https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet('HT-1000')/ToSalesOrderLineItems). What file type is displayed?

- A. XML
- B. PHP
- C. Java
- D. HTML

Answer: A

Explanation:

The URL shown is an OData service endpoint exposed from the SAP ES5 Gateway demo system: [https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet\('HT-1000'\)/ToSalesOrderLineItems](https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet('HT-1000')/ToSalesOrderLineItems)

OData services in SAP Gateway return XML responses by default when called in a browser, unless otherwise specified by request headers (like JSON format).

The structure follows AtomPub/Atom XML representation, showing entity details and navigation properties.

Therefore, the file type displayed in the browser is XML, not HTML, Java, or PHP.

NEW QUESTION # 20

Which SAP offering provides a highly scalable, distributed event streaming platform that supports MQTT, AMQP, and JMS protocols for efficient and secure event transmission in hybrid IT landscapes?

- A. SAP Cloud Platform, Integration
- B. SAP Process Orchestration
- C. SAP Integration Suite, Advanced Event Mesh
- D. SAP Business Technology Platform (SAP BTP)

Answer: C

Explanation:

SAP Integration Suite, Advanced Event Mesh (AEM) is the SAP offering that provides a highly scalable, distributed event streaming platform. It is specifically designed for large-scale, hybrid, and multi-cloud landscapes where event-driven communication is required across diverse applications and systems.

Key points from SAP documentation:

* Protocol Support: Advanced Event Mesh supports MQTT, AMQP, JMS, REST, and WebSocket protocols, ensuring secure and efficient event transmission across heterogeneous IT landscapes.

* Scalability and Distribution: Unlike standard SAP Event Mesh, which is intended for simpler messaging scenarios, AEM provides global-scale event streaming with distributed brokers that can span multiple geographies and cloud regions.

* Hybrid Integration: AEM enables real-time, event-driven integration across on-premise systems, SAP cloud applications, and third-party solutions, making it suitable for hybrid IT environments.

* Enterprise Features: It includes advanced capabilities such as high availability, disaster recovery, dynamic scaling, and fine-grained security for enterprise-grade messaging.

Why the other options are incorrect:

* A. SAP Business Technology Platform (SAP BTP) # This is the overall platform-as-a-service offering from SAP. It provides the foundation but not specifically the event streaming capability.

* B. SAP Cloud Platform, Integration # This was the older name for what is now SAP Integration Suite (Cloud Integration capability). It does not directly provide advanced distributed event streaming.

* C. SAP Process Orchestration # This is the on-premise middleware suite (PI/PO + BPM), but it is not designed for distributed event streaming or modern event protocols like MQTT.

Therefore, the correct answer is D. SAP Integration Suite, Advanced Event Mesh, as it is the only SAP solution purpose-built to deliver distributed, scalable event streaming with support for MQTT, AMQP, and JMS protocols.

NEW QUESTION # 21
