

TOP Fresh C_ABAPD_2507 Dumps - Valid SAP C_ABAPD_2507 Valid Study Notes: SAP Certified Associate - Back-End Developer - ABAP Cloud

DOWNLOAD the newest PDFDumps C_ABAPD_2507 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1kfAcrw7kEFV5lvFSZc54Mj5ylkqKojTs>

Our website aimed to helping you and fully supporting you to pass C_ABAPD_2507 actual test with high passing score in your first try. So we prepared top C_ABAPD_2507 pdf torrent including the valid questions and answers written by our certified professionals for you. Our C_ABAPD_2507 Practice Exam available in three modes, pdf files, and PC test engine and online test engine, which apply to any level of candidates.

We all want to be the people who are excellent and respected by others with a high social status. If you want to achieve that you must boost an authorized and extremely useful C_ABAPD_2507 certificate to prove that you boost good abilities and plenty of knowledge in some area. Passing the test C_ABAPD_2507 Certification can help you realize your goal and if you buy our C_ABAPD_2507 latest torrent you will pass the C_ABAPD_2507 exam successfully. You can just free download the demo of our C_ABAPD_2507 exam questions to have a check the excellent quality.

SAP - Accurate C_ABAPD_2507 - Fresh SAP Certified Associate - Back-End Developer - ABAP Cloud Dumps

Our C_ABAPD_2507 useful test guide materials present the most important information to the clients in the simplest way so our clients need little time and energy to learn our C_ABAPD_2507 useful test guide. The clients only need 20-30 hours to learn and prepare for the test. For those people who are busy in their jobs, learning or other things this is a good news because they needn't worry too much that they don't have enough time to prepare for the test and can leisurely do their main things and spare little time to learn our C_ABAPD_2507 study practice guide. So it is a great advantage of our C_ABAPD_2507 exam materials and a great convenience for the clients.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample

Questions (Q77-Q82):

NEW QUESTION # 77

You want to define the following CDS view entity with an input parameter:

define view entity Z_CONVERT

with parameters i_currency : ???

Which of the following can you use to replace ???

(Select 2 correct answers)

- A. A built-in ABAP Dictionary type
- B. A component of an ABAP Dictionary structure
- C. A built-in ABAP type
- D. A data element

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

CDS view parameters must be defined with types that are visible in the ABAP Dictionary.

* A. Built-in ABAP Dictionary type ## Supported (e.g., CURR, CHAR).

* D. Data element ## Supported, as data elements are dictionary-level types.

* B. Built-in ABAP type (like i, string) ## Not supported directly, CDS requires dictionary-compatible types.

* C. Component of a structure ## Not supported directly; parameters cannot reference structure components.

This ensures that CDS definitions remain database-compatible and semantically rich, which is critical for RAP services.

Verified Study Guide Reference: ABAP CDS Development Guide - Defining View Parameters.

NEW QUESTION # 78

What would be the correct expression to change a given string value 'mr joe doe' into 'JOE' in an ABAP SQL field list?

- A. SELECT FROM TABLE dbtabl FIELDS
Of1,
substring(upper('mr joe doe'), 4, 3) AS f2_sub_up, f3,...
- B. SELECT FROM TABLE dbtabl FIELDS
Of1,
left(lower(substring('mr joe doe', 4, 3)), 3) AS f2_left_lo_sub, f3,
- C. SELECT FROM TABLE dbtabl FIELDS
Of1,
substring(lower(upper('mr joe doe')), 4, 3) AS f2_sub_lo_up, f3,
- D. SELECT FROM TABLE dbtabl FIELDS
Of1,
upper(left('mr joe doe', 6)) AS f2_up_left, f3,

Answer: A

Explanation:

The correct expression to change a given string value 'mr joe doe' into 'JOE' in an ABAP SQL field list is C. SELECT FROM TABLE dbtabl FIELDS Of1, substring(upper('mr joe doe'), 4, 3) AS f2_sub_up, f3,... This expression uses the following SQL functions for strings12:

upper: This function converts all lowercase characters in a string to uppercase. For example, upper('mr joe doe') returns 'MR JOE DOE'.

substring: This function returns a substring of a given string starting from a specified position and with a specified length. For example, substring('MR JOE DOE', 4, 3) returns 'JOE'.

AS: This keyword assigns an alias or a temporary name to a field or an expression in the field list. For example, AS f2_sub_up assigns the name f2_sub_up to the expression substring(upper('mr joe doe'), 4, 3).

You cannot do any of the following:

A. SELECT FROM TABLE dbtabl FIELDS Of1, upper(left('mr joe doe', 6)) AS f2_up_left, f3,...: This expression uses the wrong SQL function for strings to get the desired result. The left function returns the leftmost characters of a string with a specified length, ignoring the trailing blanks. For example, left('mr joe doe', 6) returns 'mr joe'. Applying the upper function to this result returns 'MR JOE', which is not the same as 'JOE'.

B. SELECT FROM TABLE dbtabl FIELDS Of1, left(lower(substring('mr joe doe', 4, 3)), 3) AS f2_left_lo_sub, f3,...: This

expression uses unnecessary and incorrect SQL functions for strings to get the desired result. The lower function converts all uppercase characters in a string to lowercase. For example, lower(substring('mr joe doe', 4, 3)) returns 'joe'. Applying the left function to this result with the same length returns 'joe' again, which is not the same as 'JOE'.

D . SELECT FROM TABLE dbtab1 FIELDS Of1, substring(lower(upper('mr joe doe')), 4, 3) AS f2_sub_lo_up, f3,...: This expression uses unnecessary and incorrect SQL functions for strings to get the desired result. The lower function converts all uppercase characters in a string to lowercase, and the upper function converts all lowercase characters in a string to uppercase. Applying both functions to the same string cancels out the effect of each other and returns the original string. For example, lower(upper('mr joe doe')) returns 'mr joe doe'. Applying the substring function to this result returns 'joe', which is not the same as 'JOE'.

NEW QUESTION # 79

Which of the following Core Data Services built-in functions returns a result of type INT4?

(Select 2 correct answers)

- A. **date_add_days**
- B. date_is_valid
- C. **date_add_months**
- D. date_add_years

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

* date_add_days ## Returns the number of days added/subtracted to a given date # INT4.

* date_add_months ## Returns the number of months between two dates # INT4.

* date_add_years ## Returns a DATE, not INT4.

* date_is_valid ## Returns a BOOLEAN (flag), not INT4.

In CDS, these date functions are used for calculations in queries, supporting business logic pushdown.

Verified Study Guide Reference: ABAP CDS Functions Reference - Date and Time Functions.

NEW QUESTION # 80

Given the following ABAP SQL statement excerpt from an ABAP program:

```
SELECT SINGLE *
```

```
FROM spfli
```

```
WHERE carrid = 'LH' AND connid = '0400'
```

```
INTO @DATA(wa).
```

You are given the following information:

* The data source spfli on line #2 is an SAP HANA database table.

* spfli will be a large table with over one million rows.

* This program is the only one in the system that accesses the table.

* This program will run rarely.

Based on this information, which of the following general settings should you set for the spfli database table?

Note: There are 2 correct answers to this question.

- A. **"Storage Type" to "Row Store"**
- B. "Storage Type" to "Column Store"
- C. "Load Unit" to "Column Loadable"
- D. **"Load Unit" to "Page Loadable"**

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In SAP HANA, the choice of storage type and load unit depends on access patterns, table size, and usage frequency.

Here's how each part applies:

* A. "Storage Type" to "Row Store" - This is correct. Since:

* The table is accessed by only one program.

* The program runs rarely.

* The access pattern is row-oriented (SELECT SINGLE with filters).

Row store is more suitable for rare access with small result sets and no aggregation.

* D. "Load Unit" to "Page Loadable" - This is correct. Since the program runs infrequently, loading the entire column into memory (column loadable) is not efficient. Page-loadable units load only required parts into memory on demand, which reduces memory footprint.

Incorrect options:

* B. "Storage Type" to "Column Store" - Incorrect here. Column store is ideal for frequent reads, aggregations, or analytics, not for rarely accessed tables with simple lookups.

* C. "Load Unit" to "Column Loadable" - Also not optimal for rarely accessed data. Column loadable preloads entire columns into memory, which is memory-intensive and unnecessary in this case.

Reference: ABAP CDS Development Guide and SAP HANA Table Storage Guidelines - Recommended storage strategies based on access pattern, frequency, and usage role.

NEW QUESTION # 81

Which statement can you use to change the contents of a row of data in an internal table?

- A. INSERT
- B. APPEND
- C. UPDATE
- **D. MODIFY**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The correct way to change the contents of a row in an internal table is by using the MODIFY statement.

* MODIFY allows updating the existing entry in an internal table based on its key or position.

* If the row exists, the statement replaces the data; if not, it inserts a new row depending on the internal table type and whether a key is specified.

* INSERT adds new rows but does not modify.

* APPEND adds entries at the end, and UPDATE is for database tables, not internal tables.

This behavior is consistent with the ABAP programming model used in both classical and RAP-based developments when manipulating internal collections or buffering data in memory during behavior pool execution.

Reference: ABAP CDS Development User Guide, section 3.2 - Editing DDL Source Code; also aligned with the core language behavior of ABAP for internal table operations.

NEW QUESTION # 82

.....

PDFDumps SAP C_ABAPD_2507 exam information is proven. We can provide the questions based on extensive research and experience. PDFDumps has more than 10 years experience in IT certification C_ABAPD_2507 exam training, including questions and answers. On the Internet, you can find a variety of training tools. PDFDumps C_ABAPD_2507 Exam Questions And Answers is the best training materials. We offer the most comprehensive verification questions and answers, you can also get a year of free updates.
