Specifications of Easy4Engine Juniper JN0-363 Exam Preparation Material

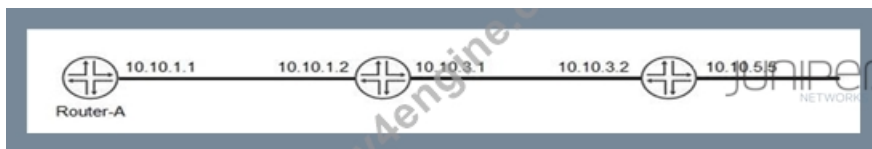

It is hard to scrutinize the Service Provider Routing and Switching, Specialist (JNCIS-SP) (JN0-363) exam, particularly assuming you have less time and the subjects are tremendous. You essentially have a baffled perspective toward it and some even consider not giving the Service Provider Routing and Switching, Specialist (JNCIS-SP) exam since they can't concentrate exactly as expected. Juniper JN0-363 Exam they need time to cover each point and this is unimaginable considering how they are left with only a piece of a month to give the Juniper JN0-363 exam.

Earning the JNCIS-SP certification can provide several benefits to individuals in the networking industry. Service Provider Routing and Switching, Specialist (JNCIS-SP) certification can help individuals stand out in the job market and increase their earning potential. It can also provide individuals with the knowledge and skills needed to work with Juniper Networks devices in a service provider environment, which is a valuable skill set in today's digital landscape.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q26-Q31):

NEW QUESTION # 26

Click the Exhibit button.

You must create a static route on Router-A to the 10.10.5.0/24 network using 10.10.3.2 as the next hop. Referring to the exhibit, which configuration accomplishes this task?

- A.

```
{master:0}[edit]
user@Router-A# show routing-options
static {
    route 10.10.5.0/24 next-hop 10.10.3.2;
}
```
- B.

```
{master:0}[edit]
user@Router-A# show routing-options
static {
    route 10.10.5.0/24 {
        next-hop 10.10.3.2;
        qualified-next-hop 10.10.1.2;
    }
}
```
- C.

```
user@Router-A# show routing-options
static {
    route 10.10.5.0/24 next-hop 10.10.1.2;
}
```
- D.

```
{master:0}[edit]
user@Router-A# show routing-options
static {
    route 10.10.5.0/24 {
        next-hop 10.10.3.2;
        resolve;
    }
}
```

Answer: D

NEW QUESTION # 27
Exhibit

Referring to the exhibit, what must be included in the Router1 configuration when establishing an EBGP session with the ISP?

- A. A local AS must be specified.
- B. The BGP session type external must be specified.
- C. The BGP session type internal must be specified.
- D. A local address must be specified.

Answer: D

Explanation:

When establishing an EBGP session, it's necessary to specify both the local AS number and the local address that the session will use. The local address is required for establishing the TCP connection for BGP. The local AS must be specified to identify the autonomous system of the router.

NEW QUESTION # 28

Which RSVP object allows LSRs to influence path selection?

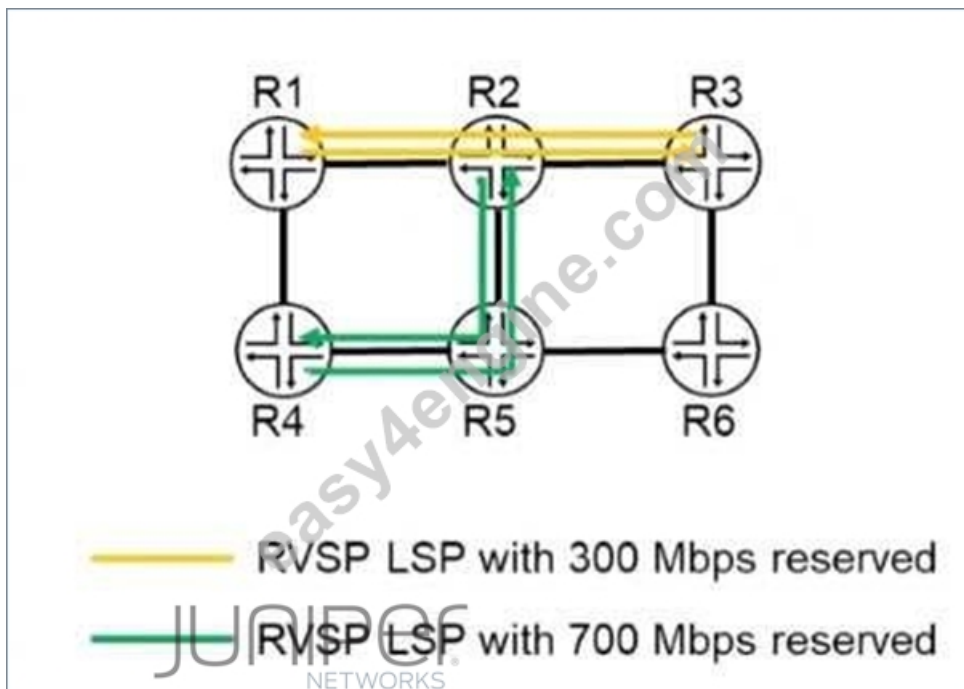

- A. explicit route object
- B. hop object
- C. record route object
- D. session object

Answer: D

NEW QUESTION # 29

The exhibit shows a topology with 1 Gbps interfaces between routers, and four RSVP LSPs operating with the respective bandwidth reservations.

Which path will be selected for a new LSP from R4 to R6 with a bandwidth reservation of 400 Mbps?

- A. R4 -> R1 -> R2 -> R5 -> R6
- B. R4 -> R1 -> R2 -> R3 -> R6
- C. R4 -> R5 -> R6
- D. R4 -> R5 -> R2 -> R3 -> R6

Answer: A

NEW QUESTION # 30

Exhibit

```
[edit]
user@router# set routing-options nonstop-routing
[edit]
user@router#
```

Referring to the exhibit, which two additional steps should you take to fully configure NSR? (Choose two.)

- A. You should configure the max period for NSR precision timers.
- B. You should configure commit synchronization.
- C. You must configure graceful restart.
- D. You must configure GRES.

Answer: B,D

Explanation:

<https://www.juniper.net/documentation/us/en/software/junos/high-availability/topics/task/nsr-configuring.html> Nonstop routing (NSR) requires both Graceful Routing Engine Switchover (GRES) and commit synchronization to be configured to maintain routing protocol and forwarding state during a Routing Engine switchover. NSR allows the secondary Routing Engine to take over the control plane without the protocols needing to restart, and GRES ensures that the forwarding plane continues operating with the current forwarding table. Commit synchronization ensures that configuration changes are synchronized between the primary and backup Routing Engines.
