Real MSSC CLT Question, New CLT Exam Objectives

It is not hard to know that CLT study materials not only have better quality than any other study materials, but also have more protection. On the one hand, we can guarantee that you will pass the exam easily if you learn our CLT study materials; on the other hand, once you didn't pass the exam for any reason, we guarantee that your property will not be lost. Our CLT Study Materials have a high quality which is mainly reflected in the pass rate. Our product can promise a higher pass rate than other study materials.

MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which is NOT a unit of measuring volume in logistics?

- A. Cubic foot
- B. Cubic yard
- C. Cubic inch
- D. Cubic gram

Answer: D

Explanation:

In logistics, volume measures the three-dimensional space occupied by an object or load, typically expressed in cubic inches, cubic feet, or cubic yards. These are standard U.S. customary units. A cubic gram, however, is not a valid measure of volume—it mixes

units of weight (grams) and volume (cubic dimensions), which are physically incompatible. CLT 4.0 emphasizes the importance of distinguishing between weight (mass) and volume (space). This distinction is critical for calculating freight density (weight per cubic foot), which determines shipping class, cost, and handling requirements. Using incorrect units can cause data-entry errors, inaccurate freight charges, or improper storage calculations. Understanding the difference between these measurement types ensures accuracy in material handling and warehouse layout design.

NEW QUESTION # 16

Which inventory control method has caused the definition of material handling to evolve away from "moving material" to providing all the "rights"?

- A. ABC inventory control
- B. FIFO inventory control
- C. Just-In-Time inventory control
- D. LIFO inventory control

Answer: C

Explanation:

JIT emphasizes delivering the right material, in the right quantity, to the right place, at the right time, with the right quality-minimizing waste and inventory. CLT notes how JIT shifts material handling from simple movement to synchronized flow and point-of-use delivery, often using kanban signals and small, frequent replenishments to support lean operations.

NEW QUESTION # 17

Which of the following is NOT a way to verify the item has been correctly picked?

- A. verify with pick list
- B. hand-held bar code scanning
- C. verify accuracy with customer
- D. manual scanning

Answer: C

Explanation:

In the CLT "Order Processing" competency, verification of picked items is accomplished within the warehouse using systematic methods-such as comparing picked quantities to the pick list, scanning item barcodes, or manual confirmation. These verification tools prevent shipping errors and ensure inventory accuracy. Contacting the customer to confirm order details after picking is not an approved verification method because it disrupts process flow and violates standard operating procedures for order control. The warehouse is responsible for internal accuracy, not external re-verification. CLT standards highlight technologies like barcoding and WMS integration as best practices for verification, ensuring that correct items are packed and shipped without requiring customer involvement. This maintains professionalism, confidentiality, and operational efficiency while reducing time and communication errors.

NEW QUESTION # 18

Secure areas under U.S. Customs and Border Protection (CBP) supervision that are generally considered outside CBP territory upon activation are

- A. Free and Secure Trade (FAST)
- B. Container Security Initiative (CSI)
- C. Foreign Trade Zones (FTZ)
- D. North American Free Trade Agreement (NAFTA)

Answer: C

Explanation:

Foreign Trade Zones (FTZs) are secured, designated areas within the United States that are treated, for customs purposes, as outside U.S. territory. According to CLT 4.0, goods entering an FTZ can be stored, assembled, or processed without immediate payment of customs duties. Duties are assessed only when goods leave the zone for domestic consumption, reducing cash-flow and tariff burdens. FTZs support international logistics efficiency by encouraging domestic manufacturing and re-exporting activities. CLT

emphasizes FTZ operations as part of global trade compliance and customs procedures, distinguishing them from programs like FAST (a trusted shipper initiative) or CSI (a port security initiative).

NEW QUESTION # 19

A system for standardizing and harmonizing the classification and labeling of chemicals is

- A. JIT
- B. FIFO
- C. GHS
- D. LIFO

Answer: C

Explanation:

The Globally Harmonized System (GHS) standardizes chemical classification, hazard statements, pictograms, signal words, and Safety Data Sheet (SDS) formats. CLT highlights GHS as the framework used across workplaces and supply chains to ensure consistent hazard communication, enabling safe handling, storage, and transport alignment with OSHA/DOT adoption of GHS elements.
