2025 SOL-C01 – 100% Free Valid Exam Sims | High-quality SOL-C01 Latest Exam Questions

The Actual4Dumps Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) PDF dumps file is a collection of real, valid, and updated SOL-C01 practice questions that are also easy to install and use. The SOL-C01 PDF dumps file can be installed on a desktop computer, laptop, and even on your smartphone devices. Just download Actual4Dumps Snowflake Certified SnowPro Associate - Platform Certification in SOL-C01 PDF Questions on your desired device and start Snowflake SOL-C01 exam dumps preparation today.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q261-Q266):

NEW QUESTION # 261
You are using Snowsight to monitor a data pipeline that involves several tasks chained together using 'AFTER' dependencies. One of the intermediate tasks, is failing intermittently. Which of the following Snowsight features would be MOST helpful in quickly identifying the root cause of the failures and assessing the impact on downstream tasks?

- A. The role hierarchy page to see if the role executing the task has the correct privileges.
- B. The Resource Monitor page to see if warehouses are being over utilized and impacting all workloads.
- C. The Snowsight worksheet interface, by running SELECT statements on the underlying data in the tables involved.
- D. The data lineage feature in Snowsight to visualize the data flow and dependencies between the tables used by the pipeline.
- E. The task history view in Snowsight, focusing on the execution details, error messages, and query profiles for and its predecessor tasks.

Answer: E

Explanation:
The task history view in Snowsight provides specific information about the execution of each task, including error messages, query profiles, and execution times. This allows you to pinpoint the cause of the failure in and examine the history of predecessor tasks to identify any upstream issues. The Task details page shows which tasks were executed after the specific task. While data lineage (Option C) is helpful for understanding data flow, it doesn't directly show execution details. Option A (worksheets) is a general debugging tool but not the most efficient for task- specific issues. Options D and E might be relevant but are less direct than examining the task history.

NEW QUESTION # 262
A Snowflake account administrator needs to configure a resource monitor to limit the credit consumption of a specific virtual warehouse named 'ANALYTICS WH'. The resource monitor should trigger a notification when the warehouse consumes 80% of its allocated credits within a calendar month and should suspend the warehouse when it reaches 100%. Which of the following SQL statements, executed in the correct order, would achieve this?

```
CREATE RESOURCE MONITOR ANALYTICS_MONITOR WITH CREDIT_QUOTA = 1000, TRIGGERS (80 PERCENT DO NOTIFY, 100 PERCENT DO SUSPEND); ALTER WAREHOUSE
ANALYTICS_WH SET RESOURCE_MONITOR = ANALYTICS_MONITOR;

CREATE RESOURCE MONITOR ANALYTICS_MONITOR CREDIT_QUOTA = 1000 TRIGGERS ON 80 PERCENT DO NOTIFY ON 100 PERCENT DO SUSPEND; ALTER WAREHOUSE
ANALYTICS_WH SET RESOURCE_MONITOR = ANALYTICS_MONITOR;

CREATE RESOURCE MONITOR ANALYTICS_MONITOR WITH CREDIT_QUOTA = 1000 TRIGGERS (WHEN 80 PERCENT DO SUSPEND, WHEN 100 PERCENT DO SUSPEND_IMMEDIATELY);
ALTER WAREHOUSE ANALYTICS_WH SET RESOURCE_MONITOR = ANALYTICS_MONITOR;

CREATE RESOURCE MONITOR ANALYTICS_MONITOR WITH CREDIT_QUOTA = 1000 TRIGGERS (80 PERCENT DO NOTIFY, 100 PERCENT DO SUSPEND_IMMEDIATELY); ALTER
WAREHOUSE ANALYTICS_WH SET RESOURCE_MONITOR = ANALYTICS_MONITOR;

CREATE RESOURCE MONITOR ANALYTICS_MONITOR WITH CREDIT_QUOTA = 1000 TRIGGERS (80 PERCENT DO NOTIFY, 90 PERCENT DO SUSPEND); ALTER WAREHOUSE
ANALYTICS_WH SET RESOURCE_MONITOR = ANALYTICS_MONITOR;
```

- A. Option B
- B. Option D
- C. Option A
- D. Option C
- E. Option E

Answer: B

Explanation:
The correct syntax for creating a resource monitor with triggers is to use the 'TRIGGERS' clause with the 'DO' keyword followed by the action. 'SUSPEND_IMMEDIATELY' ensures the warehouse stops immediately when the limit is reached, preventing further credit consumption. Other options have incorrect syntax or trigger wrong action.

NEW QUESTION # 263
You are working with Snowflake Cortex and the COMPLETE function to generate marketing copy from product specifications. You have a table `PRODUCT SPECS containing 'PRODUCT NAME,
'KEY FEATURES, and TARGET AUDIENCE columns. You want to generate a concise and engaging marketing tagline for each product. Given that 'SNOWFLAKE.ML.COMPLETE is implemented as a secure external function, what are the MINIMUM set of steps to grant the necessary permissions and execute the function successfully (select all that apply)?

- A. Grant OWNERSHIP on the SNOWFLAKE.ML.COMPLETE to the role executing the query using:GRANT OWNERSHIP ON FUNCTION SNOWFLAKE .ML. COMPLETE TO ROLE;
- B. Grant the EXECUTE TASK privilege on the account to the role executing the query using. `GRANT EXECUTE TASK ON ACCOUNT TO ROLE
- C. Grant the USAGE privilege on the database containing the SNOWFLAKE schema to the role executing the query using: GRANT USAGE ON DATABASE SNOWFLAKE SAMPLE DATA TO ROLE
- D. Ensure external functions are enabled at the account level: ALTER ACCOUNT SET ENABLE EXTERNAL FUNCTIONS-TRUE;
- E. Grant the USAGE privilege on the SNOWFLAKE schema to the role executing the query using: GRANT USAGE ON SCHEMA SNOWFLAKE TO ROLE ,

Answer: C,D,E

Explanation:
The COMPLETE function, being implemented as an external function, requires specific privileges.
Granting USAGE on the schema (A) and database (C) containing the function is essential for accessing it. Also, external functions must be enabled at the account level(D). EXECUTE TASK is unrelated to external function execution. OWNERSHIP is not needed, USAGE provides sufficient access. A and C are prereqisite to use the functions and as well Snowflake ML complete being implemented as External function, the flag ENABLE EXTERNAL FUNCTIONS should be turned on, so the correct options are

NEW QUESTION # 264
A data warehouse contains a table named 'ORDERS in schema `SALES'. The current owner of the `ORDERS' table is the `ANALYST role. The compliance team requires that the ownership be transferred to the 'SECURITY ADMIN' role, but without interrupting any existing queries or processes that use the table. What is the recommended approach to transfer ownership with minimal disruption?

- A. Create a clone of the 'ORDERS table, transfer ownership of the clone, then drop the original 'ORDERS' table and rename the clone to `ORDERS.
- B. Immediately execute 'ALTER TABLE SALES.ORDERS TRANSFER OWNERSHIP TO ROLE SECURITY_ADMIN;'
- C. Create a new table with the same structure as 'ORDERS' , load data into it, grant all privileges to 'SECURITY_ADMIN' and users from 'ANALYST role, and then drop the original 'ORDERS table. Finally, rename the new table to 'ORDERS.
- D. Create a view on top of the 'ORDERS' table, transfer ownership of the view to 'SECURITY ADMIN' , and then drop the original 'ORDERS' table.
- E. Execute 'ALTER TABLE SALES.ORDERS TRANSFER OWNERSHIP TO ROLE SECURITY_ADMIN;' during a scheduled maintenance window when no queries are running.

Answer: B

Explanation:
Transferring ownership using 'ALTER TABLE ... TRANSFER OWNERSHIP' is a metadata operation and does not lock or significantly impact existing queries on the table. It's the most straightforward and least disruptive approach. Cloning, creating views, or recreating tables involve significant data operations and downtime, which are undesirable.

NEW QUESTION # 265
A data provider wants to share a secure view 'SECURE VIEW SALES' from database 'DB RETAIL' to a consumer account using a private listing within the Snowflake Data Exchange. The provider has already created the listing. Which of the following steps are necessary to grant the consumer access, assuming the consumer account identifier is 'XYZ 12345'?

- A. Grant the `IMPORTED PRIVILEGES privilege on the database created from the share to a role and then grant that role to the consumer account 'XYZI 2345.
- B. Create a new role, grant 'SELECT on to the role, and grant that role to the consumer account 'XYZ12345'.
- C. Grant 'SELECT' privilege on the share to the account 'XYZ12345.
- D. Add the consumer account 'XYZ12345 to the listing from the Data Exchange provider interface.
- E. Grant the 'IMPORTED PRIVILEGES' privilege on the share to the account `XYZ12345'.

Answer: D

Explanation:
Adding the consumer account to the private listing from the Data Exchange provider interface is the action that allows the consumer to access the share. The other options are not directly related to providing access via a private listing within the Data Exchange. Granting privileges on the share is typically done for direct shares, not data exchange shares. Consumers consume the whole shared database.

NEW QUESTION # 266
......

Actual4Dumps has a huge team of IT experts, who continue to use their knowledge and experience to study a lot of IT certification

examination papers of past few years. Their findings of the research is now the product of Actual4Dumps, therefore Actual4Dumps's Snowflake SOL-C01 Practice Questions are very similar with the real exam, which can help a lot of people to realize their dreams. Actual4Dumps can ensure you to successfully pass the exam, and you can boldly Add Actual4Dumps's products to your shopping cart. With Actual4Dumps your dreams can be achieved immediately.
