

Top Valid AZ-204 Test Review - How to Prepare for Microsoft AZ-204 In Short Time

DOWNLOAD the newest PrepAwayPDF AZ-204 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1i0OjvooHBL8i4RLMT6QwoFyHJhBkUmj>

AZ-204 certification training of our website is a tool to help students reflect their own strength. In recent years, too many graduates of elite schools are unable to find jobs. College students face unemployment when they graduate. This is unexpected when college students have just entered the campus. AZ-204 Exam Torrent also helps students enter famous enterprises. With the increasing numbers of university graduates, the prestigious school diploma is no longer a passport for entering a good company. In recruiting, the company pays more attention to the students' ability.

When preparing for the test AZ-204 certification, most clients choose our products because our AZ-204 learning file enjoys high reputation and boost high passing rate. Our products are the masterpiece of our company and designed especially for the certification. Our AZ-204 latest study question has gone through strict analysis and verification by the industry experts and senior published authors. The clients trust our products and place great hopes on our AZ-204 Exam Dump. They treat our products as the first choice and the total amounts of the clients and the sales volume of our AZ-204 learning file is constantly increasing.

Complete AZ-204 Exam Dumps | Valid AZ-204 Exam Review

PrepAwayPDF has one of the most comprehensive and top-notch Microsoft AZ-204 Exam Questions. We eliminated the filler and simplified the Developing Solutions for Microsoft Azure exam preparation process so you can ace the Microsoft certification exam on your first try. Our Microsoft AZ-204 Questions include real-world examples to help you learn the fundamentals of the subject not only for the Microsoft exam but also for your future job.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q184-Q189):

NEW QUESTION # 184

All functions in the app meet the following requirements:

- * Run until either a successful run or until 10 run attempts occur.
- * Ensure that there are at least 20 seconds between attempts for up to 15 minutes.

You need to configure the hostjson file.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

Answer:

Explanation:

Explanation

NEW QUESTION # 185

You are developing an Azure Function App by using Visual Studio. The app will process orders input by an Azure Web App. The web app places the order information into Azure Queue Storage. You need to review the Azure Function App code shown below.

```

public static class OrderProcessor
{
    [FunctionName("ProcessOrders")]
    public static void ProcessOrders([QueueTrigger("incoming-orders")]CloudQueueMessage myQueueItem, [Table("Orders")]ICollector<Order> tableBindings, TraceWriter log)
    {
        log.Info($"Processing Order: {myQueueItem.Id}");
        log.Info($"Queue Insertion Time: {myQueueItem.InsertionTime}");
        log.Info($"Queue Expiration Time: {myQueueItem.ExpirationTime}");
        tableBindings.Add(JsonConvert.DeserializeObject<Order>(myQueueItem.AsString));
    }
    [FunctionName("ProcessOrders-Poison")]
    public static void ProcessFailedOrders([QueueTrigger("incoming-orders-poison")]CloudQueueMessage myQueueItem, TraceWriter log)
    {
        log.Error($"Failed to process order: {myQueueItem.AsString}");
        ...
    }
}

```

NOTE: Each correct selection is worth one point.

	Yes	No
The code will log the time that the order was processed from the queue.	☐	☐
When the ProcessOrders function fails, the function will retry up to five times for a given order, including the first try.	☐	☐
When there are multiple orders in the queue, a batch of orders will be retrieved from the queue and the ProcessOrders function will run multiple instances concurrently to process the orders.	☐	☐
The ProcessOrders function will output the order to an Orders table in Azure Table Storage.	☐	☐

Answer:

Explanation:

	Yes	No
The code will log the time that the order was processed from the queue.	☐	☒
When the ProcessOrders function fails, the function will retry up to five times for a given order, including the first try.	☒	☐
When there are multiple orders in the queue, a batch of orders will be retrieved from the queue and the ProcessOrders function will run multiple instances concurrently to process the orders.	☒	☐
The ProcessOrders function will output the order to an Orders table in Azure Table Storage.	☒	☐

NEW QUESTION # 186

You need to implement a solution to resolve the retail store location data issue.

Which three Azure Blob features should you enable? Each correct answer presents part of the solution.

NOTE Each correct selection is worth one point

- A. Object replication
- B. Immutability
- C. Change feed

- D. Soft delete
- E. Versioning
- F. Snapshots

Answer: C,D,E

Explanation:

Scenario: You must perform a point-in-time restoration of the retail store location data due to an unexpected and accidental deletion of data.

Before you enable and configure point-in-time restore, enable its prerequisites for the storage account: soft delete, change feed, and blob versioning.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/blobs/point-in-time-restore-manage>

NEW QUESTION # 187

You develop a containerized application. You plan to deploy the application to a new Azure Container instance by using a third-party continuous integration and continuous delivery (CI/CD) utility.

The deployment must be unattended and include all application assets. The third-party utility must only be able to push and pull images from the registry. The authentication must be managed by Azure Active Directory (Azure AD). The solution must use the principle of least privilege.

You need to ensure that the third-party utility can access the registry.

Which authentication options should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Authentication	Option
Registry authentication method	Service principal Individual identity Repository-scoped access token Managed identity for Azure resources
	AcrPull Owner AcrPush Contributor

Answer:

Explanation:

Authentication	Option
Registry authentication method	Service principal Individual identity Repository-scoped access token Managed identity for Azure resources
RBAC role	AcrPull Owner AcrPush Contributor

Explanation:

Authentication	Option
Registry authentication method	Service principal Individual identity Repository-scoped access token Managed identity for Azure resources
RBAC role	AcrPull Owner AcrPush Contributor

Box 1: Service principal

Applications and container orchestrators can perform unattended, or "headless," authentication by using an Azure Active Directory (Azure AD) service principal.

Box 2: AcrPush

AcrPush provides pull/push permissions only and meets the principle of least privilege.

Reference:

<https://docs.microsoft.com/en-us/azure/container-registry/container-registry-authentication?tabs=azure-cli>

<https://docs.microsoft.com/en-us/azure/container-registry/container-registry-roles?tabs=azure-cli>

NEW QUESTION # 188

You are developing an Azure Function App. You develop code by using a language that is not supported by the Azure Function App host. The code language supports HTTP primitives.

You must deploy the code to a production Azure Function App environment.

You need to configure the app for deployment.

Which configuration values should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Configuration parameter

Configuration value

Publish

	▼
Code	
Docker Container	

Runtime stack

	▼
Node.js	
Python	
PowerShell Core	
Custom Handler	

Version

	▼
14 LTS	
7.0	
custom	

Microsoft

Answer:

Explanation:

Configuration parameter	Configuration value
Publish	▼ Code Docker Container
Runtime stack	▼ Node.js Python PowerShell Core Custom Handler
Version	▼ 14 LTS 7.0 custom

Explanation

Box 1: Docker container

A custom handler can be deployed to every Azure Functions hosting option. If your handler requires operating system or platform dependencies (such as a language runtime), you may need to use a custom container. You can create and deploy your code to Azure Functions as a custom Docker container.

Box 2: PowerShell core

When creating a function app in Azure for custom handlers, we recommend you select .NET Core as the stack.

A "Custom" stack for custom handlers will be added in the future.

PowerShell Core (PSC) is based on the new .NET Core runtime.

Box 3: 7.0

On Windows: The Azure Az PowerShell module is also supported for use with PowerShell 5.1 on Windows.

On Linux: PowerShell 7.0.6 LTS, PowerShell 7.1.3, or higher is the recommended version of PowerShell for use with the Azure Az PowerShell module on all platforms.
