## ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q32-Q37):

### NEW QUESTION # 32

In what environment are you most likely to see multiple defect management systems used in one project?

- A. Agile
- B. Sequential
- C. Multi-tenant
- **D. Hybrid**

**Answer: D**

Explanation:

\* Context Analysis:

\* A hybrid environment combines methodologies (e.g., Agile and traditional), often leading to multiple tools to manage different workflows, methodologies, or team needs.

\* Evaluation of Options:

\* A. Sequential:

\* Incorrect. Sequential approaches usually involve a single defect management system due to their linear nature.

\* B. Agile:

\* Incorrect. Agile projects often emphasize a single integrated tool for simplicity and collaboration.

\* C. Hybrid:

\* Correct. Multiple tools are typical in hybrid models to accommodate diverse team processes.

\* D. Multi-tenant:

\* Incorrect. Multi-tenancy relates to shared infrastructure, not the use of defect management systems.

\* Syllabus Alignment:

\* ISTQB mentions hybrid approaches leading to diverse tool requirements for managing defects across different methodologies (TM-1.2.4).

### NEW QUESTION # 33

Which work experience is likely to develop the necessary skills to effectively test a software system? [3]

- A. Being a member of the production group that supported the previous release of the system
- B. Being a former Test Manager
- **C. Being the developer of testing tools used for automation**
- D. Being the current Project Manager for the system

**Answer: C**

Explanation:

Being the developer of testing tools used for automation is likely to develop the necessary skills to effectively test a software system because it involves a deep understanding of testing processes and the creation of tools that facilitate these processes. This experience provides insight into the intricacies of test automation, which is crucial for designing effective tests and ensuring thorough coverage of the system under test.

### NEW QUESTION # 34

What is a "depth-first" risk-based testing technique? [1]

- A. Lowest risk test cases are executed first
- B. Non-functional test cases are executed first
- C. All risk items are tested at least once

- D. Highest risk test cases are executed first

**Answer: D**

Explanation:

A depth-first risk-based testing technique is a method of prioritizing and executing test cases based on the risk level of the features or functions to be tested. In this technique, the test cases with the highest risk are executed first, followed by the test cases with lower risks. This ensures that the most critical and likely areas of failure are tested thoroughly and early in the testing process. ### NEW QUESTION # 36

Your test team is in the process of completing final regression testing one week before the release date. One of your staff has just uncovered a critical defect that causes data corruption.

What should you do? [2]

- A. Update the risks in your test plan to cover data corruption issues and update your test cases to be sure you test for this in the future
- B. Write a high priority defect and follow the escalation communication plan as defined in your test plan
- C. Write a high priority defect and call the business stakeholders to warn them about it
- D. Update the weekly status charts and change the project status to red

**Answer: B**

Explanation:

The best action that you should take in this situation is to write a high priority defect and follow the escalation communication plan as defined in your test plan. This is because a critical defect that causes data corruption is a serious issue that can affect the quality, functionality, and reliability of the system, and it needs to be reported and resolved as soon as possible. By writing a high priority defect, you can document the details and the impact of the defect, and alert the development team and the project manager about it. By following the escalation communication plan, you can ensure that the defect is communicated to the appropriate stakeholders, such as the business sponsors, the customers, or the senior management, in a timely and effective manner, and that the necessary actions are taken to address the defect.
