Training 350-701 Material | Valid Exam 350-701 Vce Free

P.S. Free & New 350-701 dumps are available on Google Drive shared by Actual4Exams: https://drive.google.com/open?id=1SYcu5GyDbhNCWECPuoVe4M66PwFx4mfG

Our product backend port system is powerful, so it can be implemented even when a lot of people browse our website can still let users quickly choose the most suitable for his 350-701 qualification question, and quickly completed payment. Once the user finds the 350-701 learning material that best suits them, only one click to add the 350-701 Study Tool to their shopping cart, and then go to the payment page to complete the payment, our staff will quickly process user orders online. In general, users can only wait about 5-10 minutes to receive our 350-701 learning material,

Cisco 350-701 exam is designed for network engineers, security operations center (SOC) personnel, and security and network administrators who want to enhance their knowledge and skills in implementing and operating Cisco security technologies. 350-701 exam consists of 90-110 questions, and the candidates have 120 minutes to complete it. 350-701 exam format includes multiple choice questions, drag-and-drop, simulation, and testlet questions. Candidates who pass the Cisco 350-701 exam demonstrate that they have the knowledge and skills to implement and operate Cisco security technologies to protect against cyber threats and vulnerabilities.

Cisco 350-701 Exam is intended for professionals who are responsible for implementing and managing the security infrastructure of their organizations. 350-701 exam covers various core security technologies, including network security, cloud security, endpoint protection, secure network access, visibility, and enforcement. Professionals with this certification can design, implement, and manage the security infrastructure of an organization.

NEW QUESTION # 510
Which solution combines Cisco IOS and IOS XE components to enable administrators to recognize applications, collect and send network metrics to Cisco Prime and other third-party management tools, and prioritize application traffic?

- A. Cisco Model Driven Telemetry
- B. Cisco DNA Center
- C. Cisco Application Visibility and Control
- D. Cisco Security Intelligence

Answer: C

Explanation:
The Cisco Application Visibility and Control (AVC) solution leverages multiple technologies to recognize, analyze, and control over 1000 applications, including voice and video, email, file sharing, gaming, peer-to-peer (P2P), and cloud-based applications. AVC combines several Cisco IOS/IOS XE components, as well as communicating with external tools, to integrate the following functions into a powerful solution...

NEW QUESTION # 511
After a recent breach, an organization determined that phishing was used to gain initial access to the network before regaining persistence. The information gained from the phishing attack was a result of users visiting known malicious websites. What must be done in order to prevent this from happening in the future?

- A. Modify identification profiles
- B. Modify an access policy
- C. Modify outbound malware scanning policies
- D. Modify web proxy settings

Answer: B

Explanation:
URL conditions in access control rules allow you to limit the websites that users on your network can access. This feature is called URL filtering. There are two ways you can use access control to specify URLs you want to block (or, conversely, allow): - With any license, you can manually specify individual URLs, groups of URLs, and URL lists and feeds to achieve granular, custom control over web traffic. - With a URL Filtering license, you can also control access to websites based on the URL's general classification, or category, and risk level, or reputation. The system displays this category and reputation data in connection logs, intrusion events, and application details. Using category and reputation data also simplifies policy creation and administration. It grants you assurance that the system will control web traffic as expected. Finally, because Cisco's threat intelligence is continually updated with new URLs, as well as new categories and risks for existing URLs, you can ensure that the system uses up-to-date information to filter requested URLs. Malicious sites that represent security threats such as malware, spam, botnets, and phishing may appear and disappear faster than you can update and deploy new policies. Reference:
https://www.cisco.com/c/en/us/td/docs/security/firepower/60/configuration/guide/fpmc-config-guidev60/Access_Control_Rules__URL_Filtering.html

NEW QUESTION # 512
Which suspicious pattern enables the Cisco Tetration platform to learn the normal behavior of users?

- A. interesting file access
- B. file access from a different user
- C. user login suspicious behavior
- D. privilege escalation

Answer: C

NEW QUESTION # 513
What is the benefit of installing Cisco AMP for Endpoints on a network?

- A. It protects endpoint systems through application control and real-time scanning.
- B. It enables behavioral analysis to be used for the endpoints.
- C. It provides flow-based visibility for the endpoints' network connections.
- D. It provides operating system patches on the endpoints for security.

Answer: A
