Acquia Certified Site Builder - Drupal 8 Sample Questions (Q40-Q45):

NEW QUESTION # 40

You are asked to implement a "employee of the month" block into your corporate website. The block should show name and picture of the employee and should be editable over the normal block layout. All the employees are users of the website. How do you implement the block?

- A. Install the user_blocks module from Drupal.org, select the fields you need and place block via block layout
- B. Add a custom block and select the type "user account information", activate the user name and picture fields
- C. Create a user view mode with user name and picture. Add a user reference field to one of your block types and let the user reference field use the new user view mode
- **D. Create a new Users View with user name field and user picture and an exposed filter on uid. Add a block display to the view and place the block in the block layout**

Answer: D

NEW QUESTION # 41

In the process of building your website, you installed several Drupal modules to try out, but did not end up using them. Should you uninstall these unused modules?

- A. No. Uninstalling the modules will cause a "white screen of death" (WSOD) since the modules were once enabled
- B. Yes. The more modules are installed, the "heavier" the site is. This could cause performance problems on the site.
- **C. No. Site performance improves when more modules are installed.**
- D. It is optional. The number of installed modules has no impact whatsoever on site performance.

Answer: C

NEW QUESTION # 42

You have installed a contributed module called "Sample Module" that looks like it will be a great fit for the business case you are trying to solve. However, upon closer examination, it looks like the module only supplies a drush command; it does not have an admin interface.

As a site builder with no command-line experience, this will not work for you! You need a web user interface to use this module. How should you request a web UI in the module's issue queue?

- A. Create a "Feature Request" issue for the module with subject line, "Create web UI for Sample Module." C
- B. Create a "Feature Request" issue for the module with subject line, "URGENT Module Broken! 11 Needs UI" D
- **C. Create a "Bug Report" issue for the module with subject line, "Create web UI for Sample Module."**
- D. Create a "Bug Report" issue for the module with subject line, "Create web UI for Sample Module" and give it the "Major priority"

Answer: C

NEW QUESTION # 43

You've downloaded a new contributed module from Drupal.org and added its code to your site's codebase. However, its functionality is not yet available on the site.

What remaining steps might you need to take to get this module working? Choose 2 answers.

- A. Contact the module maintainer to get your site authorized to use the module
- B. Log in as an administrator and visit /admin/install/module-name to finish the installation.
- **C. Enable the module from the "Extend" page in the site's administrative user interface**
- **D. Verify that the module's code is in the correct location in the codebase**

Answer: C,D

NEW QUESTION # 44

You have migrated an existing website to Drupal by only using core features. The client is now reporting a tremendous decrease of
