C_SAC_2501 Test Simulator Fee & C_SAC_2501 Reliable Test Tutorial

Many candidates ask us if your C_SAC_2501 original questions are really valid, if our exam file is really edited based on first-hand information & professional experts and if your C_SAC_2501 original questions are really 100% pass-rate. Maybe you have a bad purchase experience before. I want to know that if you chose providers attentively before. Hereby, I can assure you that please rest assured all we guaranteed will be achieved. We are a legal authorized company which provides valid C_SAC_2501 Original Questions more than 6 years and help thousands of candidates clear exams and obtain certification every year.

SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q12-Q17):

NEW QUESTION # 12

You are using a live connection for a model. Where is the data stored?

- A. SAP Analytics Cloud model
- B. Embedded data set
- C. Public dataset
- D. Source system

Answer: D

Explanation:

Connections and data preparation

When using a live connection in SAP Analytics Cloud, the data remains stored in the source system. This means that no data is imported or replicated into SAP Analytics Cloud; instead, it is accessed and analyzed in real-time directly from the source system.

This approach ensures that the most current data is always used for analysis and that data governance and security policies of the source system remain in control.

SAP Analytics Cloud Connection Guide

SAP Analytics Cloud Data Connections - InsightCubes

In the context of SAP Analytics Cloud, when using a live connection to connect to a data source, the data remains stored in the source system. This setup means that SAP Analytics Cloud directly queries the data in its original location, without importing or copying it into the SAP Analytics Cloud environment. This approach is advantageous for several reasons, including maintaining a single source of truth, reducing data redundancy, and ensuring data is always up-to-date without the need for synchronization processes. Live connections are particularly useful for real-time or near-real-time data analysis and reporting, providing insights based on the most current data available without the overhead of data replication.

SAP Analytics Cloud documentation and user guides typically emphasize the benefits and use cases of live connections, highlighting how they maintain data in the source system to ensure real-time data access and analysis.

SAP training materials for Data Analysts using SAP Analytics Cloud, including study guides and official certification resources, explain the technical and practical aspects of live connections, including where data is stored and how it is accessed.

Best practice guides for SAP Analytics Cloud, often available through the SAP Community or SAP Knowledge Base, provide insights and recommendations on setting up and using live connections, reinforcing the concept that data stays in the source system.

NEW QUESTION # 13

How can you determine node relationships in a value driver tree? Note: There are 2 correct answers to this question.

- A. Use a dimension hierarchy
- B. Use a calculated member
- C. Use a story calculated measure
- D. Use a model converted measure

Answer: A,B

NEW QUESTION # 14

In a data model, what can you use to further describe a dimension?

- A. Data action
- B. Property
- C. Measure
- D. Variable

Answer: B

Explanation:

In a data model within SAP Analytics Cloud, Properties are used to further describe dimensions. Properties provide additional context or metadata for dimension members, such as descriptions, classifications, or other attributes that help to better understand and analyze the data within the dimension. This makes properties essential for detailed data analysis and reporting.

NEW QUESTION # 15

You are creating an allocation step to distribute expenses from the HR cost center to your operating cost centers. Which dimension setting controls how much is distributed to each operating cost center?

- A. Distribute
- B. Reference
- C. Driver
- D. Redistribute

Answer: C

Explanation:

In the context of creating an allocation step to distribute expenses from the HR cost center to operating cost centers in SAP Analytics Cloud, the "Driver" dimension setting is crucial. This setting determines the basis or criteria on which the distribution is calculated and applied to each operating cost center. For instance, the driver could be the number of employees, square footage, or any other relevant metric that justifies the distribution of costs. By defining a driver, you ensure that the allocation of expenses is proportional and fair based on the selected criteria.

NEW QUESTION # 16

You have a live data model with two dimensions: Firstname and Lastname. Users want a single dimension in the data model that displays the dimensions as Lastname, Firstname. What must you do?

- A. Create a calculated dimension in the story.
- B. Group the Firstname and Lastname in the data model.
- C. Create the combined data in the source system.
- **D. Create a calculated dimension in the data model.**

Answer: D

Explanation:

To combine two dimensions, Firstname and Lastname, into a single dimension displaying as Lastname, Firstname in a live data model, you should create a calculated dimension in the data model. This calculated dimension will concatenate the two fields into one, according to the specified format. This approach allows for the creation of a new dimension that can be used across various reports and analyses within the model, maintaining the integrity of the original dimensions.
