They must also possess a deep understanding of the Salesforce data model, including object relationships, data access, and data sharing rules. Candidates should have several years of experience working with

Salesforce and should have a strong understanding of the platform's capabilities and limitations.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q33-Q38):

NEW QUESTION # 33

Users at Universal Containers are complaining that a field has disappeared from the Account page after deploying its latest project. The page layout has not changes with this deployment.

How should the admin troubleshoot this issue?

- A. Review change to Account record types.
- B. Run a Who Sees What report, filtering on Account.
- C. Log in as user and check several Accounts to isolate the problem records.
- **D. View Field Accessibility in the Object Manager**

Answer: D

Explanation:

Explanation

The best way to troubleshoot this issue is to view Field Accessibility in the Object Manager. This will allow the admin to see how the field-level security settings affect the visibility of the field for different profiles and record types. The other options are not helpful, because:

Reviewing changes to Account record types will not show why a field has disappeared from the Account page, unless the field is dependent on a record type that has been deactivated or modified.

Logging in as user and checking several Accounts will not isolate the problem records, because the issue is related to field visibility, not record access.

Running a Who Sees What report will not help, because this report only shows how sharing settings affect record access, not field visibility.

NEW QUESTION # 34

Universal Containers (UC) operates worldwide, with offices in more than 100 regions in 10 different countries, and has established a very complex Role Hierarchy to control data visibility. In the new fiscal year, UC is planning to reorganize the roles and reassign account owners.

Which feature should an architect recommend to avoid problems with this operation?

- A. Skinny table
- B. Partition data using Divisions
- **C. Deferred Sharing Recalculation**

Answer: C

Explanation:

When performing large-scale changes, such as reorganizing roles or reassigning ownership, recalculating sharing rules can be resource-intensive and may affect performance. Deferred Sharing Recalculation allows Salesforce admins to temporarily pause sharing rule calculations during bulk operations. This ensures that the reorganization completes efficiently, and the sharing recalculations are processed after the changes are made.

* Option A: Partitioning data using Divisions helps segment data logically but does not address the specific need to optimize sharing recalculations.

* Option B: Skinny tables improve query performance for specific data structures but do not mitigate recalculation delays.

* Option C (Correct): Deferred Sharing Recalculation ensures minimal performance impact during bulk ownership changes or Role Hierarchy updates.

References:

* Deferred Sharing Recalculation

NEW QUESTION # 35

To grant Universal Containers sales manager access to shipment records properly, it was necessary to leverage Apex managed sharing. The IT team is worried about improper access to records.

Which two features and best practices should a Salesforce architect recommend to mitigate this risk?

- A. Use with Sharing keyword in Apex classes to assure record visibility will be followed.
- B. Use isShareable in Apex classes to assure record visibility will be followed.
- C. Use runAs system method in test classes to test using different users and profiles.
- D. Use isAccessible keyword in Apex classes to assure record visibility will be followed

Answer: D

NEW QUESTION # 36

By Viewer Access you can see the data in a report or dashboard, but you can't make any changes, except by cloning it into a new report or dashboard.

- A. True
- B. False

Answer: A

Explanation:

Explanation

The statement is true. By Viewer Access, you can see the data in a report or dashboard, but you can't make any changes, except by cloning it into a new report or dashboard. Viewer Access is one of the three types of folder access levels in Salesforce, along with Editor Access and Manage Access.

NEW QUESTION # 37

Universal Containers (UC) has created a custom Invoice object. Standard sales users at UC can see the records in search layout, but when they click to view the detail, only record name, created date, and last modified date are shown. When the system admin accesses it, he or she sees the full record detail with many more data fields.

What is the likely cause of this issue?

- A. A role-based sharing rule is missing and should be added for the sales user's role to grant access to the fields.
- B. The Sales Users profile does not have access to the remaining fields.
- C. The page layout assigned to Sales User profile has only Read-Only access to the fields.

Answer: B

Explanation:

Field-level security (FLS) defines which fields a user can view or edit. If a user can see some fields (like Name, Created Date, etc.) but not others, the issue is likely related to FLS settings on the user's profile.

* Option A: Role-based sharing rules control record access, not field access.

* Option B (Correct): The Sales User profile likely lacks FLS access for the fields in question. Adjusting the profile or permission sets to grant visibility to these fields will resolve the issue.

* Option C: Page layouts define which fields are displayed but cannot override field-level security. If the profile lacks FLS access, the fields won't appear regardless of the layout.
