## Trend Deep-Security-Professional Valid Exam Syllabus & Deep-Security-Professional Real Dumps

The web-based Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) practice exam is accessible from any major OS, including Mac OS X, Linux, Android, Windows, or iOS. These Trend Deep-Security-Professional exam questions are browser-based, so there's no need to install anything on your computer. Chrome, IE, Firefox, and Opera all support this Trend Deep-Security-Professional web-based practice exam. You can take this Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) practice exam without plugins and software installation.

## Trend Micro Certified Professional for Deep Security Sample Questions

## (Q77-Q82):

### NEW QUESTION # 77

Which of the following Firewall rule actions will allow data packets to pass through the Firewall Protection Module without being subjected to analysis by the Intrusion Prevention Protection Module?

- A. Deny
- B. Allow
- C. Force Allow
- D. Bypass

**Answer: D**

Explanation:

The Bypass action in Deep Security's Firewall module allows specified traffic to skip both Firewall and Intrusion Prevention analysis, resulting in the most efficient possible flow for trusted communications.

Reference:

Trend Micro Deep Security Administrator's Guide, Firewall Rule Actions Section

### NEW QUESTION # 78

The Overrides settings for a computer are displayed in the exhibit. Which of the following statements is true regarding the displayed configuration?

- A. The configuration for the Protection Modules is inherited from the policy assigned to this computer, except for the configuration of the Web Reputation and Application Control Protection Modules which have been set at the computer level.
- B. The Protection Modules identified as Inherited in the exhibit have not yet been enabled. Only the Web Reputation and Application Control Protection Modules have been enabled at this point.
- C. The Web Reputation and Application Control Protection Modules have been assigned a different policy that the other Protection Modules and as a result, are displayed with overrides.
- D. The Protection Modules identified as Inherited in the exhibit have not yet been configured. Only the Web Reputation and Application Control Protection Modules have been configured.

**Answer: D**

### NEW QUESTION # 79

A Recommendation Scan is run to determine which Intrusion Prevention rules are appropriate for a Server.

The scan is configured to apply the suggested rules automatically and ongoing scans are enabled. Some time later, an operating

system patch is applied. How can you determine which Intrusion Prevention rules are no longer needed on this Server?

- A. Since the rules are being applied automatically, when the next Intrusion Prevention Recommendation Scan is run automatically, any rules that are no longer needed will be displayed on the Recommended for Unassignment tab in the IPS Rules. These are rules that are no longer needed and can be disabled as the vulnerability was corrected with the patch.
- B. Since the rules are being applied automatically, when the next Intrusion Prevention Recommendation Scan is run automatically, any rules that are no longer needed will be automatically unassigned. These are rules that are no longer needed as the vulnerability was corrected with the patch.
- **C. Since there is no performance effect when multiple Intrusion Prevention rules are applied, there is no need to determine which rules are no longer needed. The original recommended rules can remain in place without affecting the system.**
- D. The README file provided with the software patch will indicate which issues were addressed with this release. Compare this list to the rules that are applied to determine which rules are no longer needed and can be disabled.

**Answer: C**

Explanation:

When ongoing Recommendation Scans are enabled, Deep Security regularly reassesses the server's vulnerabilities based on its current patch level. If an OS patch addresses a previously detected vulnerability, the next Recommendation Scan will recognize this and recommend that the now-unnecessary IPS rules be unassigned. These rules appear in the "Recommended for Unassignment" tab, making it easy for administrators to review and unassign rules that are no longer needed.

From the official documentation:

"After an operating system or application is patched, running another Recommendation Scan will update the list of vulnerabilities and may move some IPS rules to the 'Recommended for Unassignment' tab. These rules can then be reviewed and unassigned to maintain optimal protection." Option B is incorrect because rules are not unassigned automatically; admin review is required. Option A is manual and outside Deep Security's automated workflow.

The first option C is not correct; excessive rules may impact performance and management.

## NEW QUESTION # 80

What is IntelliScan?

- A. IntelliScan is a malware scanning method that monitors process memory in real time. It can identify known malicious processes and terminate them.
- B. IntelliScan reduces the risk of viruses entering your network by blocking real-time compressed executable files and pairs them with other characteristics to improve malware catch rates.
- **C. IntelliScan is a method of identifying which files are subject to malware scanning as determined from the file content. It uses the file header to verify the true file type.**
- D. IntelliScan is a mechanism that improves scanning performance. It recognizes files that have already been scanned based on a digital fingerprint of the file.

**Answer: C**

Explanation:

IntelliScan is a Trend Micro technology that determines which files to scan for malware based on the actual file type, rather than just the file extension. This is done by analyzing the file header, allowing Deep Security to correctly scan files even if their extension has been changed to disguise their true nature.

From the official documentation:

"IntelliScan is a scanning method that identifies the true file type by examining the file header, instead of relying only on the file extension. This ensures that malicious files cannot evade detection simply by renaming extensions." Option A is correct and matches the official explanation.

Options B, C, and D are incorrect and describe features not provided by IntelliScan.

## NEW QUESTION # 81

Which Protection Modules can make use of a locally installed Smart Protection Server?

- A. All Protection Modules can make use of the locally installed Smart Protection Server
- **B. The Anti-Malware and Web Reputation Protection Modules can make use of the locally installed Smart Protection Server.**
- C. Anti-Malware is the only Protection Modules that can use the locally installed Smart Protection Server.
- D. The Anti-Malware, Web Reputation and Intrusion Prevention Protection Modules can make use of the locally installed Smart Protection Server.

**Answer: B**

Explanation:

Only the Anti-Malware and Web Reputation modules are designed to interact with a Smart Protection Server for real-time threat lookups. The other modules do not leverage the Smart Protection Server.

From the official documentation:

"Smart Protection Server provides global threat intelligence lookups to the Anti-Malware and Web Reputation modules. Other modules do not use Smart Protection Server." References:
