The clients at home and abroad strive to buy our Professional-Cloud-DevOps-Engineer study materials because they think our products are the best study materials which are designed for preparing the test Google certification. They trust our Professional-Cloud-DevOps-Engineer study materials deeply not only because the high quality and passing rate of our Professional-Cloud-DevOps-Engineer study materials but also because our considerate service system. They treat our Professional-Cloud-DevOps-Engineer Study Materials as the magic weapon to get the Google certificate and the meritorious statesman to increase their wages and be promoted. You may be not quite familiar with our Professional-Cloud-DevOps-Engineer study materials and we provide the detailed explanation of our Professional-Cloud-DevOps-Engineer study materials as follow for you have an understanding before you decide to buy.

If you want to pass your exam and get your certification, we can make sure that our Professional-Cloud-DevOps-Engineer guide questions will be your ideal choice. Our company will provide you with professional team, high quality service and reasonable price. In order to help customers solve problems, our company always insist on putting them first and providing valued service. We are living in the highly competitive world now. We have no choice but improve our soft power, such as get Professional-Cloud-DevOps-Engineer Certification. It is of great significance to have Professional-Cloud-DevOps-Engineer guide torrents to pass exams as well as highlight your resume, thus helping you achieve success in your workplace.

>> Professional-Cloud-DevOps-Engineer Actual Exam Dumps <<

100% Pass Quiz 2025 Newest Professional-Cloud-DevOps-Engineer: Google Cloud Certified - Professional Cloud DevOps Engineer Exam Actual Exam Dumps

For consolidation of your learning, our PDF, Software and APP online versions of the Professional-Cloud-DevOps-Engineer exam questions also provide you with different sets of practice questions and answers. Doing all these sets of the Professional-Cloud-DevOps-Engineer study materials again and again, you enrich your knowledge and maximize chances of an outstanding exam success. And the content of the three version is the same, but the displays are totally different. If you want to know them before the payment, you can free download the demos of our Professional-Cloud-DevOps-Engineer learning braindumps.

To be eligible to take the Professional-Cloud-DevOps-Engineer Certification Exam, candidates must have at least three years of experience in software development, DevOps, or system administration. They must also have experience using Google Cloud Platform services and be proficient in at least one programming language.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

You recently created a Cloud Build pipeline for deploying Terraform code stored in a GitHub repository. You make Terraform code changes in short-lived branches and sometimes use tags during development. You tag releases with a semantic version when they are ready for deployment. You require your pipeline to apply the Terraform code whenever there is a new release, and you need to minimize operational overhead. What should you do?

- A. Create a build trigger with the `*` branch pattern.
- B. Create a build trigger with the `\d*\d+\d*` branch pattern.
- **C. Create a build trigger with the `\d+\d+\d*` tag pattern.**
- D. Create a build trigger with the `.*` tag pattern.

Answer: C

Explanation:

To deploy only on new release tags, which follow a semantic versioning pattern (e.g., v1.2.3), you should use a tag filter with a regular expression matching semantic versions.

From the official documentation:

"You can configure Cloud Build to start a build automatically whenever there is a new tag in your source repository by using tag triggers."

- Cloud Build Triggers

Using a tag pattern like `\d+\d+\d*` ensures that builds only trigger on properly versioned release tags (minimizing unnecessary executions). This matches standard semver tags such as 1.0.0, 2.1.3, etc.

NEW QUESTION # 41

You are running a web application deployed to a Compute Engine managed instance group. Ops Agent is installed on all instances. You recently noticed suspicious activity from a specific IP address. You need to configure Cloud Monitoring to view the number of requests from that specific IP address with minimal operational overhead. What should you do?

- A. Update the application to export the IP address request metrics to the Cloud Monitoring API.
- B. Create a script to scrape the web server log. Export the IP address request metrics to the Cloud Monitoring API.
- **C. Configure the Ops Agent with a logging receiver. Create a logs-based metric.**
- D. Configure the Ops Agent with a metrics receiver.

Answer: C

NEW QUESTION # 42

Your team is designing a new application for deployment both inside and outside Google Cloud Platform (GCP). You need to collect detailed metrics such as system resource utilization. You want to use centralized GCP services while minimizing the amount of work required to set up this collection system. What should you do?

- A. Install an Application Performance Monitoring (APM) tool in both locations, and configure an export to a central data storage location for analysis.
- B. Instrument the code using a timing library, and publish the metrics via a health check endpoint that is scraped by Stackdriver.
- **C. Import the Stackdriver Debugger package, and configure the application to emit debug messages with timing information.**
- D. Import the Stackdriver Profiler package, and configure it to relay function timing data to Stackdriver for further analysis.

Answer: C

NEW QUESTION # 43

You are managing an application that runs in Compute Engine. The application uses a custom HTTP server to expose an API that is accessed by other applications through an internal TCP/UDP load balancer. A firewall rule allows access to the API port from 0.0.0.0/0. You need to configure Cloud Logging to log each IP address that accesses the API by using the fewest number of steps. What should you do, Bret?

- A. Install the Ops Agent on the Compute Engine instances.
- **B. Enable logging on the firewall rule**
- C. Enable Packet Mirroring on the VPC
- D. Enable VPC Flow Logs on the subnet

Answer: B

Explanation:

Explanation

The best option for configuring Cloud Logging to log each IP address that accesses the API by using the fewest number of steps is to enable logging on the firewall rule. A firewall rule is a rule that controls the traffic to and from your Compute Engine instances. You can enable logging on a firewall rule to capture information about the traffic that matches the rule, such as source and destination IP addresses, protocols, ports, and actions. You can use Cloud Logging to view and export the firewall logs to other destinations, such as BigQuery, for further analysis.

NEW QUESTION # 44

You are using Stackdriver to monitor applications hosted on Google Cloud Platform (GCP). You recently deployed a new application, but its logs are not appearing on the Stackdriver dashboard.

You need to troubleshoot the issue. What should you do?

- A. Confirm that the application is using the required client library and the service account key has proper permissions.
- B. Confirm that port 25 has been opened in the firewall to allow messages through to Stackdriver.
- **C. Confirm that the Stackdriver agent has been installed in the hosting virtual machine.**
- D. Confirm that your account has the proper permissions to use the Stackdriver dashboard.

Answer: C
