2      96.45.32.81         443     -5         0          FDNI
...
9      fds1.fortinet.com   443     -5         0          DEFAULT
```

Index	Address	Port	TimeZone	Distance	Source
*0	10.0.1.50	8890	-5	0	CLI
1	96.45.33.89	443	-5	0	FDNI
2	96.45.32.81	443	-5	0	FDNI
...					
9	fds1.fortinet.com	443	-5	0	DEFAULT

- A. From public FDNI server IP address with the fourth highest octet only
- B. From the list of configured override servers or public FDN servers
- C. From the default server fds1.fortinet.com
- D. From the configured override server IP address 10.0.1.50 only

Answer: D

Explanation:

As the server override mode is strict, there is no fallback. FMG will communicate only with server configure in override server list.

An administrator has created a firewall address object that is used in multiple policy packages for multiple FortiGate devices in an ADOM.

After the installation operation is performed, which IP/netmask will be installed on Remote-Firewall [VDOM1] for the LAN firewall address object?

- A. 172.16.5.0/255.255.255.0
- B. 10.10.10.5/255.255.255.255
- C. 172.16.5.20/255.255.255.255
- D. 21.21.2.5/255.255.255.255

Answer: D

Explanation:

The per-device mapping overrides the global IP/netmask setting for the firewall address object. For the device "Remote-Firewall," the mapped IP/netmask is 21.21.2.5/255.255.255.255, so this value will be installed on Remote-Firewall [VDM1].

NEW QUESTION # 25

Refer to the exhibit.

FortiManager # diagnose dvm device list									
--- There are currently 6 devices/vdoms managed ---									
--- There are currently 6 devices/vdoms count for license ---									
TYPE	OID	SN	HA	IP	NAME	ADOM	IPS	FIRMWARE	HW_GenX
fmgfaz-managed	188	FGVM02TM24013504	-	100.65.1.111	BR1-FGT-1	My_ADOM	7.0 MR6 (3401)	N/A	
- STATUS: dev-db: not modified; conf: in sync; cond: pending; dm: installed; conn: up; template:[modified]default									
- vdom:[3]root flags:0 adom:My_ADOM pkg:[imported]BR1-FGT-1									

Which two statements about the output are true? (Choose two.)

- A. The latest revision history for the managed FortiGate does not match the device-level database.
- B. The system template default will override device-level database configurations.
- C. The latest revision history for the managed FortiGate does match the FortiManager policy database.
- D. Configuration changes have been installed on FortiGate, updating policy and device-level database.

Answer: A,B

Explanation:

The status "pending" indicates the latest revision history does not match the device-level database, meaning there are unapplied changes.

The template is marked as [modified], so the system template default will override device-level database configurations when installed.

If the monitored interface for the primary FortiManager device fails, what must you do to maintain high availability (HA)?

- A. Check the integrity database of the primary device to force a secondary device to become the new primary with all active interfaces.
- B. Reconfigure the primary device to remove the peer IP address of the failed device from its configuration.
- **C. The FortiManager HA failover is transparent to administrators and does not require any additional action.**
- D. Manually promote one of the working secondary devices to the primary role; and reboot the original primary device to remove the peer IP address of the failed device.

Answer: C

Explanation:

In a FortiManager HA cluster configured with VRRP failover, the failover process is automatic and transparent to administrators. If the monitored interface on the primary device fails, the secondary device takes over without requiring manual intervention to maintain HA.

NEW QUESTION # 27

Refer to the exhibits. An administrator runs the reload failure command `diagnose test deploymanager reloadconf 262` on FortiManager.

Why does the administrator receive an error message?

Diagnose output

```

```
FortiManager # diagnose test deploymanager reloadconf 262
Retrieving configuration file from FGT...
Error: Configuration file import error.
```

- A. FortiManager requires the FortiGate serial number instead of the ID number.
- **B. The administrator just recently added FortiGate HQ-NGFW as a model device.**
- C. The administrator must use the FortiGate name instead of the ID number.
- D. FortiManager does not support FortiOS version 7.0.

Answer: B

Explanation:

The error occurs because the FortiGate HQ-NGFW device with ID 262 is a newly added model device and has not yet been fully synchronized or installed with a configuration package, which causes the reload configuration command to fail.
