Topic 4	• Quality Management in Manufacturing: This topic describes the processes related to implementing QM in Manufacturing.
Topic 5	• Quality Management in Sales and Distribution: The topic describes the integration of QM with Sales and Distribution.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q48-Q53):

NEW QUESTION # 48
For which structure elements of a quality notification is the assignment of a catalog type possible? Note:
There are 3 correct answers to this question.

- A. Defect types
- B. Defect causers
- C. Assigned objects
- D. Tasks
- E. Defect locations

Answer: A,D,E

Explanation:
In SAP S/4HANA QM, quality notifications (e.g., transaction QM01) use catalog types to classify data in specific structure elements:
* Defect Locations (A): Catalog type "A" (Defect Location) can be assigned to specify where a defect occurred (e.g., "Surface"), configured in the notification item (SPRO > QM > Quality Notifications > Catalogs).
* Defect Types (D): Catalog type "9" (Defect Type) is assigned to classify the nature of the defect (e.g.,
"Scratch"), a standard field in the notification item.
* Tasks (E): Catalog type "2" (Tasks) is used to define actions (e.g., "Repair") in the tasks tab of the notification.
* Assigned Objects (B): Objects (e.g., material, batch) are referenced but don't use catalog types directly.
* Defect Causers (C): Causers (e.g., "Machine") use catalog type "5" (Causes), but this isn't listed as
"Defect causers" in standard terms; it's typically "Causes."
Thus, "Defect locations," "Defect types," and "Tasks" are the correct answers based on standard structure elements.References:
SAP Help Portal - "Catalogs in Quality Notifications"; SAP S/4HANA QM User Guide
- "Notification Structure".

NEW QUESTION # 49
Which of the following API types does SAP recommend to use to achieve clean core integrations? Note:
There are 2 correct answers to this question.

- A. RFC
- B. SOAP
- C. OData
- D. IDoc

Answer: B,C

Explanation:
For clean core integrations in SAP S/4HANA (minimizing custom code):
* SOAP (A): SAP recommends SOAP APIs for robust, secure integrations (e.g., enterprise services), supporting clean core by leveraging standard interfaces.
* OData (D): OData is the preferred RESTful API type for S/4HANA, enabling flexible, standard integrations (e.g., via SAP Gateway), a cornerstone of clean core.
* RFC (B): Remote Function Calls are legacy and less favored for clean core due to tight coupling.
* IDoc (C): IDocs are traditional EDI-focused, not prioritized for modern clean core integrations.
Thus, "SOAP" and "OData" are the correct answers.References: SAP Help Portal - "Integration APIs in S
/4HANA"; SAP S/4HANA Developer Guide - "Clean Core APIs".

NEW QUESTION # 50
The receipt of a quality certificate should be recorded independently from the goods receipt. What is the necessary setting to fulfill this requirement?

- A. Assignment of a status profile in the certificate type
- B. Control of certificate receipt in the quality info record: Procurement
- C. Assignment of a status profile in the certificate profiles
- D. Indicator for enhanced certificate processing in the certificate type

Answer: B

Explanation:
To record quality certificate receipt independently from goods receipt (GR) in SAP S/4HANA QM, the system must decouple these processes:
* Control of Certificate Receipt in the Quality Info Record: Procurement (B): In the quality info record (transaction QI01), the "Certificate Control" settings (e.g., "Certificate Required" and "Check at GR" unchecked) allow certificate receipt to be recorded separately (e.g., via transaction QC55) before or after GR. This is the standard setting to achieve independence, ensuring the GR posts to blocked stock or proceeds without certificate enforcement at that step (SPRO > QM > Quality Certificates > Procurement).
* Assignment of a Status Profile in the Certificate Profiles (A): Certificate profiles (transaction QC01) define outgoing certificates, not incoming certificate receipt processes.
* Indicator for Enhanced Certificate Processing in the Certificate Type (C): The certificate type (SPRO > QM > Quality Certificates > Define Certificate Types) has an "Enhanced Processing" indicator, but it relates to certificate creation, not independent receipt recording.
* Assignment of a Status Profile in the Certificate Type (D): Status profiles in certificate types manage certificate statuses, not GR independence.
Thus, "Control of certificate receipt in the quality info record: Procurement" is the correct answer.References:
SAP Help Portal - "Certificate Receipt in Procurement"; SAP S/4HANA QM Customizing Guide - "Quality Certificates".

NEW QUESTION # 51
Where do you define the procedure for calculation of the quality score at usage decision?

- A. Quality info record: Procurement
- B. Inspection type settings in the material master
- C. Procurement data in the quality management view of the material master
- D. Usage decision code

Answer: B

NEW QUESTION # 52
The adapt field selection function allows you to define a customer specific field selection for quality management screens. Where in the system can you make the adjustments?

- A. In the default settings for QM transactions
- B. In the table control settings
- C. In user specific presettings
- D. In the IMG settings

Answer: B

NEW QUESTION # 53
......
