False 500-710 practice materials deprive you of valuable possibilities of getting success. As professional model company in this line, success of the 500-710 training guide will be a foreseeable outcome. Even some nit-picking customers cannot stop practicing their high quality and accuracy. We are intransigent to the quality issue and you can totally be confident about their proficiency sternly. Choosing our 500-710 Exam Questions is equal to choosing success.

To take the Cisco 500-710 Exam, candidates must have a good understanding of Cisco video infrastructure solutions and have experience working with Cisco video technologies. It is recommended that candidates have at least two years of experience in implementing and supporting Cisco video solutions before taking the exam.

Latest 500-710 Test Guide - 500-710 Torrent

Grasping different consumers' learning situation in a comprehensive way, the operation system of our 500-710 practice materials can adapt to different consumer groups. Facts speak louder than words. Through years' efforts, our 500-710 exam preparation has received mass favorable reviews because the 99% pass rate of our 500-710 Study Guide is the powerful proof of trust of the public. No other vendor can do this like us, we are the unique and best 500-710 learning prep provider!

Cisco 500-710, also known as the Cisco Video Infrastructure Implementation Certification Exam, is a test designed to evaluate your knowledge and skills in designing and implementing video infrastructure solutions for enterprises. Cisco Video Infrastructure Implementation certification exam is significant for IT professionals who want to specialize in video collaboration technologies across businesses. The Cisco 500-710 exam is one of the four tests that lead to the Cisco Video Infrastructure Design Certification.

Cisco 500-710 Certification Exam is designed for IT professionals who want to validate their skills and knowledge in implementing video infrastructure solutions using Cisco technologies. 500-710 exam is part of the Cisco Certified Specialist - Video Infrastructure Implementation certification track and is intended for individuals who work with Cisco video infrastructure solutions in a variety of job roles such as network engineers, system administrators, and technical support specialists.

Cisco Video Infrastructure Implementation Sample Questions (Q46-Q51):

NEW QUESTION # 46

Which two administrative functions can a Cisco Spark Partner reseller perform from the Cisco Spark Management portal? (Choose two.)

- A. Quickly start customer trials
- B. Determine role-based access and view usage reports
- C. Determine Single Sign-On customer usage reports
- D. Enable Single Sign-On and Directory sync through corporate LDAP services on-premises

- E. Help to manage the customers' accounts

Answer: C,E

NEW QUESTION # 47

Cisco Meeting Server can be deployed using three different deployment models, which option lists deployment models that are the best solution to accommodate fail-over?

- A. single combined server deployment
- B. single split server deployment
- C. scaled and combined server deployment
- D. scaled and resilient server deployment

Answer: D

Explanation:

= The scaled and resilient server deployment model is the best solution to accommodate fail-over for Cisco Meeting Server. This model involves deploying multiple Meeting Servers clustered together to provide greater scale and resilience in the deployment. The cluster can span across different locations and support up to 2500 HD ports. The cluster can also handle the failure of one or more servers without affecting the ongoing conferences or the user experience. The cluster uses a load balancer to distribute the incoming calls among the available servers, and uses a database replication mechanism to synchronize the conference state and configuration across the servers.¹²³ References = 1Cisco Meeting Server - Configuration Guides 2Cisco Meeting Server 3.8, Scaled and Resilient Server Deployment Guide 3Cisco Meeting Server 3.8, White Paper on Load Balancing Calls Across Cisco Meeting Servers

NEW QUESTION # 48

Which statement about integrating a Cisco Expressway with a resilient and scalable Cisco Meeting Server deployment is true?

- A. Only Expressway edges can be integrated with Cisco Meeting Server.
- B. Only Cisco Expressway cores can be integrated with Cisco Meeting Server.
- C. Neither Expressway cores nor Expressway edges can be integrated with Cisco Meeting Server.
- D. Expressway cores and Expressway edges can be integrated with Cisco Meeting Server.

Answer: D

Explanation:

* Cisco Expressway is a video gateway that enables interoperability between different video endpoints and protocols. It consists of two components: Expressway core and Expressway edge.¹

* Cisco Meeting Server is a video conferencing solution that supports scalable and resilient deployments with multiple servers and clusters. It can integrate with various call control systems, such as Cisco Unified Communications Manager, Cisco Expressway, or Microsoft Skype for Business.²

* To integrate Cisco Expressway with Cisco Meeting Server, the following steps are required:³

* Configure the Expressway edge as the traversal server for the Meeting Server, and enable SIP and H.323 protocols on the Expressway edge.

* Configure the Expressway core as the traversal client for the Meeting Server, and enable SIP and H.323 protocols on the Expressway core.

* Configure the Meeting Server as the traversal server for the Expressway core, and enable SIP and H.323 protocols on the Meeting Server.

* Configure the call control system to route calls to the Expressway core, and configure the Expressway core to route calls to the Meeting Server.

* Optionally, configure the Expressway core to provide IM&P and video integration with Microsoft Skype for Business, if deployed in the core network with the Meeting Server.

* By integrating both Expressway core and Expressway edge with Cisco Meeting Server, the following benefits can be achieved:³

* Support for various video endpoints and protocols, such as SIP, H.323, WebRTC, and BFCP.

* Support for firewall traversal and NAT traversal for external participants.

* Support for encryption and authentication for secure communication.

* Support for load balancing and failover for high availability and scalability.

NEW QUESTION # 49

Which two primary protocols does TMS use to communicate with endpoints and infrastructure? (Choose two.)

- A. HTTPS
- B. H.323
- C. SNMP
- D. BFCF
- E. SIP

Answer: C,E

Explanation:

* TMS stands for TelePresence Management Suite, which is a software application that provides centralized management, scheduling, and monitoring of video conferencing endpoints and infrastructure¹.

* TMS uses two primary protocols to communicate with endpoints and infrastructure: SIP and SNMP²³.

* SIP stands for Session Initiation Protocol, which is a signaling protocol that is used to establish, modify, and terminate multimedia sessions, such as voice and video calls. TMS uses SIP to communicate with endpoints and infrastructure that support SIP, such as Cisco Unified Communications Manager, Cisco Expressway, Cisco Meeting Server, and Cisco TelePresence endpoints²³.

* SNMP stands for Simple Network Management Protocol, which is a protocol that is used to monitor and manage network devices, such as routers, switches, servers, and endpoints. TMS uses SNMP to communicate with endpoints and infrastructure that support SNMP, such as Cisco TelePresence System MXP series, Cisco TelePresence Server, and Cisco TelePresence Conductor²³.

* TMS also uses other protocols, such as HTTP/HTTPS, XML, and SOAP, to communicate with endpoints and infrastructure, depending on the type and version of the system²³.

NEW QUESTION # 50

An engineer wants to add a domain to a numeric E.164 alias dialed by an H.323 endpoint. Which option is the Cisco recommended method to add this domain in the Expressway configurations?

- A. user policy
- B. transforms
- C. service preference
- D. call policy

Answer: B
