NEW QUESTION # 41

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF).

In this HTTP/1.1-compliant web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 3xx
- B. 5xx
- C. 4xx
- **D. 2xx**

Answer: D

Explanation:

In HTTP/1.1, response status codes are categorized to indicate the result of a client's request. Here's a detailed explanation of the 2xx class of HTTP response status codes:

* 2xx Success Codes:

* Definition: The 2xx class of status codes indicates that the client's request was successfully received, understood, and accepted by the server.

* Common Codes:

* 200 OK: The request has succeeded.

* 201 Created: The request has been fulfilled and resulted in a new resource being created.

* 202 Accepted: The request has been accepted for processing, but the processing is not complete.
