

Trustworthy NCP-US-6.5 Source | NCP-US-6.5 Authorized Exam Dumps

P.S. Free & New NCP-US-6.5 dumps are available on Google Drive shared by Dumps4PDF: https://drive.google.com/open?id=1x2chCSsNIX-62f275_K4NGzoWuOe382Z

Candidates who become Nutanix NCP-US-6.5 certified demonstrate their worth in the Nutanix field. The Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) certification is proof of their competence and skills. This is a highly sought-after skill in large Nutanix companies and makes a career easier for the candidate. To become certified, you must pass the Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) certification exam. For this task, you need high-quality and accurate Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam dumps. We have seen that candidates who study with outdated Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) practice material don't get success and lose their resources.

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Configure Nutanix Files with advanced features• Determine the appropriate method to ensure data availability• recoverability
Topic 2	<ul style="list-style-type: none">• Troubleshoot issues related to Nutanix Files• Explain Data Management processes for Files and Objects

Topic 3	<ul style="list-style-type: none"> • Identify the steps to deploy Nutanix Files • Given a scenario, determine product and sizing parameters
Topic 4	<ul style="list-style-type: none"> • Analyze and Monitor Nutanix Unified Storage • Describe the use of Data Lens for data security
Topic 5	<ul style="list-style-type: none"> • Utilize File Analytics for data security • Troubleshoot Nutanix Unified Storage • Configure Nutanix Volumes
Topic 6	<ul style="list-style-type: none"> • Given a scenario, configure shares, buckets, and or Volume Groups • Troubleshoot a failed upgrade for Files • Objects
Topic 7	<ul style="list-style-type: none"> • Troubleshoot issues related to Nutanix Objects • Troubleshoot issues related to Nutanix Volumes
Topic 8	<ul style="list-style-type: none"> • Deploy and Upgrade Nutanix Unified Storage • Perform upgrades • maintenance for Files • Objects implementations
Topic 9	<ul style="list-style-type: none"> • Configure Nutanix Objects • Describe how to monitor performance and usage

Let Trustworthy NCP-US-6.5 Source Help You Pass The Nutanix Certified Professional - Unified Storage (NCP-US) v6.5

Perhaps it was because of the work that there was not enough time to learn, or because the lack of the right method of learning led to a lot of time still failing to pass the NCP-US-6.5 examination. Whether you are the first or the second or even more taking NCP-US-6.5 examination, our NCP-US-6.5 exam prep not only can help you to save much time and energy but also can help you pass the exam. In the other words, passing the exam once will no longer be a dream.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q69-Q74):

NEW QUESTION # 69

An administrator has deployed a new Files cluster within a Windows Environment. After some days, he Files environment is not able to synchronize users with the Active Directory server anymore. The administrator observes a large time difference between the Files environment and the Active Directory Server that is responsible for the behavior. How should the administrator prevent the Files environment and the AD Server from having such a time difference in future?

- A. Use 0.pool.ntp.org as the NTP Server for the AD Server.
- B. Use 0.pool.ntp.org as the NTP Server for the Files environment.
- C. Connect to every FSVM and edit the time manually.
- **D. Use the same NTP Servers for the File environment and the AD Server.**

Answer: D

Explanation:

The administrator should prevent the Files environment and the AD Server from having such a time difference in future by using the same NTP Servers for the File environment and the AD Server. NTP (Network Time Protocol) is a protocol that synchronizes the clocks of devices on a network with a reliable time source. NTP Servers are devices that provide accurate time information to other devices on a network.

By using the same NTP Servers for the File environment and the AD Server, the administrator can ensure that they have consistent and accurate time settings and avoid any synchronization issues or errors. References: Nutanix Files Administration Guide, page 32; Nutanix Files Troubleshooting Guide

NEW QUESTION # 70

An administrator has received an alert AI303551 - VolumeGroupProtectionFailed details of alerts as follows:
Which error logs should the administrator be reviewing to determine why the relative service is down:

- A. solver.log
- B. arithmos.ERROR

Answer: B

Explanation:

The error log that the administrator should review to determine why the relative service is down is arithmos.ERROR. Arithmos is a service that runs on each CVM and provides volume group protection functionality for Volumes. Volume group protection is a feature that allows administrators to create protection policies for volume groups, which define how often snapshots are taken, how long they are retained, and where they are replicated. If arithmos.ERROR log shows any errors or exceptions related to volume group protection, it can indicate that the relative service is down or not functioning properly. NEW QUESTION # 71

An organization currently has a Files cluster for their office data including all department shares. Most of the data is considered cold Data and they are looking to migrate to free up space for future growth or newer data.
The organization has recently added an additional node with more storage. In addition, the organization is using the Public Cloud for .. storage needs.
What will be the best way to achieve this requirement?

- A. Backup the data using a third-party software and replicate to the cloud.
- B. Enable Smart Tiering in Files within the File Console.
- C. Migrate cold data from the Files to tape storage.
- D. Setup another cluster and replicate the data with Protection Domain.

Answer: B

Explanation:

The organization uses a Nutanix Files cluster, part of Nutanix Unified Storage (NUS), for back office data, with most data classified as Cold Data (infrequently accessed). They want to free up space on the Files cluster for future growth or newer data. They have added a new node with more storage to the cluster and are already using the Public Cloud for other storage needs. The goal is to migrate Cold Data to free up space while considering the best approach.

Analysis of Options:

* Option A (Set up another cluster and replicate the data with Protection Domain): Incorrect.

Setting up another cluster and using a Protection Domain to replicate data is a disaster recovery (DR) strategy, not a solution for migrating Cold Data to free up space. Protection Domains are used to protect and replicate VMs or Volume Groups, not Files shares directly, and this approach would not address the goal of freeing up space on the existing Files cluster-it would simply create a copy on another cluster.

* Option B (Enable Smart Tiering in Files within the Files Console): Correct. Nutanix Files supports Smart Tiering, a feature that allows data to be tiered to external storage, such as the Public Cloud (e.g., AWS S3, Azure Blob), based on access patterns. Cold Data (infrequently accessed) can be automatically tiered to the cloud, freeing up space on the Files cluster while keeping the data accessible through the same share. Since the organization is already using the Public Cloud, Smart Tiering aligns perfectly with their infrastructure and requirements.

* Option C (Migrate cold data from Files to tape storage): Incorrect. Migrating data to tape storage is a manual and outdated process for archival. Nutanix Files does not have native integration with tape storage, and this approach would require significant manual effort, making it less efficient than Smart Tiering. Additionally, tape storage is not as easily accessible as cloud storage for future retrieval.

* Option D (Back up the data using a third-party software and replicate to the cloud): Incorrect.

While backing up data with third-party software and replicating it to the cloud is feasible, it is not the best approach for this scenario. This method would create a backup copy rather than freeing up space on the Files cluster, and it requires additional software and management overhead. Smart Tiering is a native feature that achieves the goal more efficiently by moving Cold Data to the cloud

while keeping it accessible.

Why Option B?

Smart Tiering in Nutanix Files is designed for exactly this use case: moving Cold Data to a lower-cost storage tier (e.g., Public Cloud) to free up space on the primary cluster while maintaining seamless access to the data.

Since the organization is already using the Public Cloud and has added a new node (which increases local capacity but doesn't address Cold Data directly), Smart Tiering leverages their existing cloud infrastructure to offload Cold Data, freeing up space for future growth or newer data. This can be configured in the Files Console by enabling Smart Tiering and setting policies to tier Cold Data to the cloud.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"Smart Tiering in Nutanix Files allows administrators to tier Cold Data to external storage, such as AWS S3 or Azure Blob, to free up space on the primary Files cluster. This feature can be enabled in the Files Console, where policies can be configured to identify and tier infrequently accessed data while keeping it accessible through the same share."

:

Nutanix Files Administration Guide, Version 4.0, Section: "Smart Tiering in Nutanix Files" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files Data Management Features".

NEW QUESTION # 72

How many configure snapshots are supported for SSR in a file server?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The number of configurable snapshots that are supported for SSR in a file server is 200. SSR (Snapshot-based Replication) is a feature that allows administrators to replicate snapshots of shares or exports from one file server to another file server on a different cluster or site for disaster recovery purposes. SSR can be configured with various parameters, such as replication frequency, replication status, replication mode, etc.

SSR supports up to 200 configurable snapshots per share or export in a file server. References: Nutanix Files Administration Guide, page 81; Nutanix Files Solution Guide, page 9

NEW QUESTION # 73

Users are complaining about having to reconnecting to share when there are networking issues.

Which files feature should the administrator enable to ensure the sessions will auto-reconnect in such events?

- A. Durable File Handles
- B. Workload Optimization
- C. Multi-Protocol Shares
- D. Connected Shares

Answer: A

Explanation:

The Files feature that the administrator should enable to ensure the sessions will auto-reconnect in such events is Durable File Handles. Durable File Handles is a feature that allows SMB clients to reconnect to a file server after a temporary network disruption or a client sleep state without losing the handle to the open file. Durable File Handles can improve the user experience and reduce the risk of data loss or corruption. Durable File Handles can be enabled for each share in the Files Console. Reference: Nutanix Files Administration Guide, page 76; Nutanix Files Solution Guide, page 10

NEW QUESTION # 74

.....

As is known to us, there are best sale and after-sale service of the NCP-US-6.5 certification training dumps all over the world in our

company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable NCP-US-6.5 latest questions for all customers. More importantly, it is evident to all that the NCP-US-6.5 Training Materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market. If you want to pass the NCP-US-6.5 exam and get the related certification in the shortest time, choosing the NCP-US-6.5 training materials from our company will be in the best interests of all people.
