If you still worry too much about purchasing professional SDLCSA test guide on the internet, I can tell that it is quite normal. Useful certification SDLCSA guide materials will help your preparing half work with double results. If you consider about our SDLCSA exam questions quality, you can free download the demo of our SDLCSA Exam Questions. We have thought of your needs and doubts considerably on the SDLCSA study guide. Our certification SDLCSA guide materials are collected and compiled by experience experts who have worked in this line more than 10 years.

### Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q34-Q39):

#### NEW QUESTION # 34

In order to remove the AOM cage, best describe the location of the 4 screws that need to be removed.

- A. 3 screws on the top, 1 screw on the side
- B. 3 screws on the side, 1 screw on the top
- C. 4 screws on the top, 0 screws on the side
- **D. 2 screws on the top, 2 screws on the side**

**Answer: D**

Explanation:

The AOM (Add-On Module) cage in the SYS-421GE-TNHR2-LCC is secured with 2 screws on the top and 2 on the side, a balanced approach in Supermicro's modular designs (e.g., SYS-420GP-TNAR). This ensures stability and accessibility in DLC systems. A and B skew placement, while C (all top) ignores side support. D matches Supermicro's chassis

engineering, making it correct. References: Supermicro AOM cage specs, DLC system structural design.

#### NEW QUESTION # 35

In the video, how many AOC NIC cards are located on the LPIO board?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

#### NEW QUESTION # 36

What are the full steps and proper order for replacing a failed NVMe SSD drive in the SYS-421GE-TNHR2- LCC system?

- A. Remove failed drive/drive carrier from chassis carriage > Insert new drive/drive carrier into chassis carriage > Remove failed DIMM from drive carrier > Insert new drive into drive carrier
- B. Remove failed drive from drive carrier > Remove CPU from chassis carriage > Insert new drive into drive carrier > Insert new drive/drive carrier into chassis carriage
- **C. Remove failed drive/drive carrier from chassis carriage > Remove failed drive from drive carrier > Insert new drive into drive carrier > Insert new drive/drive carrier into chassis carriage**
- D. Remove failed drive/drive carrier from chassis carriage > Remove failed drive from drive carrier > Insert new drive/drive carrier into chassis carriage > Insert new fan into drive carrier

**Answer: C**

Explanation:

Replacing an NVMe SSD in a Supermicro system like the SYS-421GE-TNHR2-LCC, which supports Direct Liquid Cooling, follows a standard procedure for hot-swappable drives in high-performance servers. The correct sequence, as outlined in Supermicro's general server maintenance guides (e.g., for SYS-420 series or similar DLC-enabled systems), is:

\* Remove failed drive/drive carrier from chassis carriage: NVMe drives are housed in carriers for easy access and hot-swap capability, a feature emphasized in Supermicro's DLC rack-scale solutions for minimizing downtime in AI/HPC workloads.

\* Remove failed drive from drive carrier: The carrier is opened to extract the faulty NVMe SSD.

\* Insert new drive into drive carrier: The replacement NVMe SSD is secured into the carrier.

\* Insert new drive/drive carrier into chassis carriage: The carrier is reinserted into the chassis, ensuring proper connection. Option D accurately reflects this logical order. Option A incorrectly involves DIMMs (memory modules), B mentions a fan (unrelated to NVMe replacement), and C involves a CPU (not part of the process). Supermicro's DLC systems prioritize modularity and serviceability, making D the verified procedure. References: Supermicro NVMe SSD replacement guides (e.g., SYS-420GP-TNAR Manual), DLC solution serviceability features.

#### NEW QUESTION # 37

When removing the PCIe tray, where are the screws located and how many screws need to be loosened?

- **A. There are 4 screws that need to be loosened, two on each side of the front of the PCIe tray**
- B. There are 2 screws that need to be loosened, one on each side of the front of the PCIe tray
- C. There are 6 screws that need to be loosened, three on each side on the front of the PCIe tray
- D. There are 2 screws that need to be loosened, one on each side on the sides of the GPU tray

**Answer: A**

Explanation:

Removing the PCIe tray in the SYS-421GE-TNHR2-LCC requires loosening 4 screws, two on each side of the front, per Supermicro's standard tray removal (e.g., SYS-420GP-TNAR). This ensures secure detachment of the heavy, DLC-integrated tray. B (6 screws) is excessive, C misplaces screws to a GPU tray's sides, and D (2 screws) under-secures. Supermicro's DLC systems balance stability and serviceability, making A correct.

### NEW QUESTION # 38

Which card would you most likely connect to the AOM module (AOM-GP401-PCIE)?

- A. Credit card
- B. AOM card
- C. Debit card
- **D. AOC NIC card**

**Answer: D**

Explanation:

The AOM module (AOM-GP401-PCIE) in Supermicro systems is a PCIe-based add-on module, typically for expansion cards like NICs (Network Interface Cards). The AOC NIC card (Add-On Card, Network Interface Card) is the most likely connection, as Supermicro's AOM modules (e.g., in SYS-420 series) are designed to interface with AOC cards for networking in DLC systems. A (AOM card) is vague and not a standard term, while B and D (credit/debit cards) are irrelevant. Supermicro's DLC solutions integrate high-speed networking, making C the verified choice.
