analysis professional (CBAP) application Questions are real and error-free questions that will surely repeat in the upcoming Certified business analysis professional (CBAP) application exam and you can easily pass the final Certified business analysis professional (CBAP) application CBAP Exam even with good scores.

IIBA Certified business analysis professional (CBAP) application Sample Questions (Q28-Q33):

NEW QUESTION # 28

Before investing further in the project, a customer and the stakeholder of the project wants to be able to visualize the final product. Which elicitation technique should the business analyst (BA) select?

- A. Reverse engineering
- B. Interface Analysis
- C. Observation
- **D. Prototyping**

Answer: D

Explanation:

Prototyping is an elicitation technique that involves creating a mock-up or a simulation of the final product to demonstrate its functionality and design to the customer and the stakeholder. Prototyping can help the BA to obtain feedback, validate requirements, and resolve ambiguities or conflicts early in the development process.

Prototyping can also help the customer and the stakeholder to visualize the final product and confirm that it meets their expectations and needs. References:

NEW QUESTION # 29

Which of the following is described in the statement below?

"It shows the history and pattern of variation. It is a line graph that shows data points plotted in the order in which they occur. They show trends in a process over time, variation over time, or declines or improvements in a process over time. Trend analysis is performed using them."

- **A. Run chart**
- B. Histogram
- C. Pareto chart
- D. Cause and effect diagram

Answer: A

NEW QUESTION # 30

You are working with several business analysts to determine the solution approach for an identified problem. All of the following techniques are acceptable for identifying the solution approach except for which one?

- **A. Risk analysis**
- B. Benchmarking
- C. Brainstorming
- D. Decision analysis

Answer: A

NEW QUESTION # 31

Which of the following is the process of analyzing the areas of a project that are most affected by risk?

- **A. Risk Analysis**
- B. Risk Urgency Assessment

- C. Risk Identification
- D. Risk Categorization

Answer: A

Explanation:

Explanation

Risk analysis is the process of analyzing the areas of a project that are most affected by risk. It involves estimating the probability and impact of each identified risk, as well as assessing the quality and reliability of the available data. Risk analysis helps to prioritize the risks based on their severity and potential effect on the project objectives and deliverables. Risk analysis also helps to identify the root causes and triggers of the risks, as well as the interrelationships and dependencies among the risks. Risk analysis is the second step of risk management, which also includes risk identification, risk response, and risk monitoring and control. NEW QUESTION # 32

You are the business analyst for a solution that has 435 stakeholders.
How many communication channels exist in this project?

- A. 94,395
- B. 0
- C. 189,225
- D. 188,790

Answer: D

Explanation:

Explanation

The number of communication channels in a project is an indicator of the complexity of communication among the stakeholders. It is calculated by using the following formula1:

Number of communication channels = $N \times (N - 1) / 2$

Where N = Number of stakeholders

In this case, N = 435, so the number of communication channels is:

$435 \times (435 - 1) / 2 = 188,790$

Therefore, the correct answer is A. 188,790. References:
