UiPath Certified Professional Automation Business Analyst Professional v1.0 Sample Questions (Q75-Q80):

NEW QUESTION # 75

What is the primary goal of task analysis in the context of evaluating automation potential?

- A. To measure the time spent on a specific task or process
- B. To visualize and analyze the steps involved in a task

- C. To identify potential bottlenecks or areas for improvement
- D. To determine the level of expertise required to perform the task

Answer: B

Explanation:

The primary goal of task analysis in the context of evaluating automation potential is to visualize and analyze the steps involved in a task. This involves collecting data on how employees perform their tasks, identifying patterns, and analyzing which parts of the process can be automated. Task analysis helps in understanding the workflow in detail, which is crucial for discovering automation opportunities and designing effective automation solutions.

The concept of task analysis and its role in identifying automation potential is discussed in the UiPath Documentation Portal, particularly in the section "Task Mining - Introduction" found at <https://docs.uipath.com/task-mining/automation-suite/2021.10/user-guide/introduction1>.

NEW QUESTION # 76

For text assets, is there any character limit for the Global Value Field?

- A. Yes, this field allows for up to 100000 characters
- B. No, there is no such limit
- C. Yes, this field allows for up to 1000000 characters
- **D. Yes, this field allows for up to 4000 characters**

Answer: D

Explanation:

For text assets in UiPath, there is a character limit for the Global Value Field, which allows for up to 4000 characters. This limit is important for managing data sizes and ensuring performance and stability within the UiPath Orchestrator environment.

NEW QUESTION # 77

What are the main functionalities provided by Assisted Task Mining to enhance task understanding and analysis?

- A. It disregards the task graph and focuses only on the annotation of actions.
- **B. It allows you to capture variations of tasks, merge these variations for a comprehensive understanding, edit the task graph, and accelerate actionability by generating essential assets.**
- C. It only focuses on generating PDD and XAML files, ignoring the variations or illustration of tasks.
- D. It captures the actions performed by the mouse clicks and system logs.

Answer: B

Explanation:

Understanding Assisted Task Mining (ATM):

Assisted Task Mining focuses on enhancing the understanding of known tasks by capturing user actions, analyzing variations, and generating actionable outputs like PDDs and automation skeletons.

Why Option A is Correct:

Capturing task variations and merging them into a comprehensive map ensures end-to-end task analysis.

Editing task graphs and annotating actions facilitates deeper analysis and provides clear insights for automation.

Essential outputs like PDDs and XAML files accelerate the implementation process.

Why Other Options Are Incorrect:

Option B: Focusing solely on mouse clicks and system logs limits the scope of task analysis.

Option C: ATM does not ignore variations; it integrates them for a better understanding.

Option D: Disregarding the task graph would overlook a critical analysis tool.

NEW QUESTION # 78

Which types of changes can occur post-implementation in an automation project?

- **A. Changes include requests that result from increasing the percentage of automation, improvements to the existing automation, bug fixing, or gaps in the documentation, discovered after Go-Live.**

- B. Changes include new reports or dashboards, changes to existing reports and new logs.
- C. Changes include new initiatives, or future changes on the process that have been approved for automation.
- D. Changes include adding new steps, removing existing steps, modifying existing steps or changing the order of executing steps.

Answer: A

Explanation:

Post-implementation, automation projects often undergo iterative refinements. These include requests to expand the automation coverage, optimize the process, fix issues, or fill documentation gaps.

"After Go-Live, it's common to have change requests for enhancements, bug fixes, and updates that improve the stability and performance of the automation." These are part of the continuous improvement cycle in automation programs.

NEW QUESTION # 79

What is same-screen detection for actions recorded in an UiPath Task Capture diagram?

- A. During the capture process Task Capture automatically detects actions that contain similar screenshots and also merges them
- B. After finishing the capture process. Task Capture offers to detect actions per all documents that contain similar screenshots and also offers to merge them. The merge is automatic, thus making the process fast and efficient
- C. Prior to starting the capture process, Task Capture analyzes the applications used and groups them by similarity of appearance, so that during the recording the screenshots will be automatically grouped
- D. After finishing the capture process. Task Capture offers to detect actions per all documents that contain similar screenshots and also offers to merge them. The actions can also be manually reviewed prior to merging

Answer: D

Explanation:

In an UiPath Task Capture diagram, same-screen detection for actions recorded is described by the feature where after finishing the capture process, Task Capture offers to detect actions per all documents that contain similar screenshots and also offers to merge them. The actions can also be manually reviewed prior to merging. This feature ensures that similar actions are grouped, enhancing the clarity and efficiency of the process documentation.
