UiPath Certified Professional Automation Business Analyst Professional v1.0 UiPath-ABAv1 Prüfungsfragen mit Lösungen (Q21-Q26):

21. Frage

In UiPath Studio ReFramework, what can be the output from the Process Transaction state?

- A. Success, Waiting for input, Business Exception
- **B. Success, Business Exception, System Exception**
- C. Success, Fail, Paused
- D. Success, Error

Antwort: B

Begründung:

In UiPath Studio's ReFramework, the outputs from the Process Transaction state can be Success, Business Exception, or System Exception. This classification helps in handling different outcomes of transaction processing effectively-Success for transactions completed without issues, Business Exception for errors related to the business logic, and System Exception for errors related to the system or application.

22. Frage

Which of the following is considered a Thin Client?

- A. Desktop Applications
- B. Webpages / Web Applications
- **C. VDI / Remote Desktops**
- D. Terminal Emulator

Antwort: C

Begründung:

In the context of UiPath, a Thin Client refers to an application that is accessed over a network such as a web application or a remote desktop. It is typically a browser-based interface or a virtual desktop infrastructure (VDI) like Remote Desktops. Thin clients do not run the application locally; instead, they rely on a server to process the application tasks. This contrasts with Thick Clients, which are applications installed locally on a machine where UiPath can directly interact with the elements of the application¹.

23. Frage

When starting a project with UiPath Process Mining, you can leverage already created applications to shorten the delivery time of a project. What are three out-of-the-box app templates available in UiPath Process Mining repository that you can deploy for a project?

- A. Lead Management for Salesforce Pardot, Data Warehouse for SAP, Incident Management for ServiceNow
- B. Incident Management for Service Now, TemplateOne-SingleFile for any source system, Mortgage Loans for Oracle Cloud
- C. Purchase-to-Pay for any source system, Warehouse Management for SAP, Mortgage Loans for Oracle Cloud
- **D. Purchase-to-Pay for SAP, Order-to-Cash for Oracle JDE, Lead-to-Order for Salesforce**

Antwort: D

Begründung:

UiPath Process Mining provides a variety of out-of-the-box app templates that can be used as a starting point for creating process applications. These templates are designed to work with specific source systems and can be customized to fit business needs. The templates include a set of dashboards and KPIs to enable business users to monitor and analyze the processes in detail. The correct options from the given choices are:

*Purchase-to-Pay for SAP: This app template is designed for the SAP source system and can be extracted using Theobald Xtract Universal¹.

*Order-to-Cash for Oracle JDE: This template is suitable for the Oracle JDE source system and uses CData Sync for data extraction¹.

*Lead-to-Order for Salesforce: This app template is tailored for the Salesforce source system and also relies on CData Sync for data extraction¹.

These templates are part of the process-specific app templates for specific source systems available in the UiPath Process Mining repository.

References: The information is verified as per the UiPath Process Mining documentation on app templates available at the UiPath Documentation Portal¹.

24. Frage

Which type of automation is most commonly used in Customer Service or Customer Support processes?

- A. Unattended automation
- **B. Attended automation**
- C. Desktop automation
- D. UI automation

Antwort: B

Begründung:

The type of automation most commonly used in Customer Service or Customer Support processes is Attended automation. This form of automation is interactive and requires human intervention at certain points, making it ideal for customer service environments where decisions and responses need to be tailored to specific customer interactions.

25. Frage

Which of the following best describes the differences between an "as is" process map and a "to be" process map in the context of RPA (Robotic Process Automation)?

- **A. An "as is" process map shows the current state of a process, while a "to be" process map shows the desired future state of**

the process

- B. An "as is" process map shows the steps in a process, while a "to be" process map shows the inputs and outputs for each step
- C. An "as is" process map is used for data analysis, while a "to be" process map is used for process optimization
- D. An "as is" process map is used for manual processes, while a "to be" process map is used for automated processes

Antwort: A

Begründung:

The differences between an "as is" process map and a "to be" process map in the context of RPA are that an "as is" process map shows the current state of a process, while a "to be" process map shows the desired future state of the process after automation has been implemented. This distinction is fundamental as it guides the transformation from manual to automated processes by highlighting necessary changes and enhancements.
