

# UiPath-ADPv1 Dumps Questions | Reliable UiPath-ADPv1 Test Vce

## Answer Area

### Description

- 1 Retrieve the X-UiPath-Signature HTTP header.
- 2 To obtain the raw signature bytes, decode the value of the header from Base64.
- 3 Compare the computed signature to the value from X-UiPath-Signature HTTP header.
- 4 Compute the hash using SHA256 and the signing key (UTF-8 encoded).

### Step Sequence

Our web-based practice exam software is an online version of the UiPath-ADPv1 practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the certification exam on the first attempt, our web-based UiPath UiPath-ADPv1 Practice Test software is your best option. You will go through UiPath (ADPv1) Automation Developer Professional mock exams and will see for yourself the difference in your preparation.

## UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.</li></ul>

## 100% Pass UiPath-ADPv1 - Trustable UiPath (ADPv1) Automation Developer Professional Dumps Questions

itPass4sure is not only a website but as a professional UiPath-ADPv1 Study Tool for candidates. Last but not least, we have advanced operation system of UiPath-ADPv1 training materials which not only can ensure our customers the fastest delivery speed but also can protect the personal information of our customers automatically. In addition, our professional after sale stuffs will provide considerate online after sale service twenty four hours a day, seven days a week for all of our customers.

## UiPath (ADPv1) Automation Developer Professional Sample Questions (Q42-Q47):

NEW QUESTION # 42

When encountering an ApplicationException, what occurs if the developer chooses InvalidOperationException as the exception handler within the Catches section of the Try Catch activity?

- A. No exceptions are happening and the workflow continues to execute.
- **B. The Finally block is executed and the Catches section catches the exception.**
- C. No exception is thrown and the Finally block executes.
- D. A runtime error occurs and the Finally block is not executed.

**Answer: B**

Explanation:

In a Try Catch activity within UiPath, when an exception is thrown that does not match any of the exception types specified in the Catches section, the exception is unhandled by the Catches section. If the thrown exception is an ApplicationException and the Catches section is only configured to handle an InvalidOperationException, then the ApplicationException is not caught because it is a different type of exception.

However, regardless of whether the exception is caught, the Finally block always executes. The Finally block is designed to run after the Try block and after any Catch blocks are checked for matches (regardless of whether a match is found or not).

Therefore, the correct answer is:

A: The Finally block is executed and the Catches section catches the exception.

In this context, "the Catches section catches the exception" means that the Catches section is evaluated for a match. Since ApplicationException is not handled by the InvalidOperationException catch block, the exception is not actually caught, but the Finally block will still execute.

#### NEW QUESTION # 43

What is the purpose of the Interval filter in the Orchestrator's Monitoring page?

- **A. It allows you to control the granularity of the displayed data and check the health of your system in either the last day or the last hour.**
- B. It allows you to allocate licenses per machine for the displayed data.
- C. It allows you to choose between background and foreground processes for the displayed data.

- D. It enables you to sort the displayed data based on job priorities.

**Answer: A**

Explanation:

The purpose of the Interval filter in the Orchestrator's Monitoring page is to allow you to control the granularity of the displayed data and check the health of your system in either the last day or the last hour.

The Monitoring page provides various metrics and charts that show the status and performance of your robots, processes, queues, and transactions. The Interval filter lets you choose the time frame for the data that you want to see. You can select either the last day or the last hour as the interval. The data will be updated accordingly and show you the trends and changes in your system over the selected period. This can help you identify any issues or anomalies and take corrective actions if needed.

#### NEW QUESTION # 44

Once "Library A" has been imported as a dependency in the current project, how can the UI Object Repository defined in "Library A" be accessed?

- **A. The Object Repository will automatically be available in the Process.**
- B. The Object Repository is only available in a Library.
- C. The Object Repository needs to be exported as a UI Library and imported in the Process for it to become available.
- D. The Object Repository cannot be passed between a Process and a Library.

**Answer: A**

Explanation:

The Object Repository is a feature of UiPath Studio that allows you to store and manage UI elements in a structured way, similar to a DOM (Document Object Model)<sup>1</sup>. The Object Repository can be created and used in both libraries and processes<sup>2</sup>. When you import a library as a dependency in a process, the Object Repository defined in the library will automatically be available in the process<sup>3</sup>. You can access the UI elements from the library by using the UI Activities tab in the Object Repository panel<sup>3</sup>. You can also drag and drop the UI elements from the library to the Designer panel<sup>3</sup>.

#### NEW QUESTION # 45

A developer needs to create a repetitive process in the REFramework. Following the best practices, which action(s) should be performed to defend against potential robot crashes such as "out of memory"?

- **A. All "Invoke Workflow File" activities from the Main.xaml file should be marked with the Isolated option.**
- B. After every transaction, clear the transaction data, close the applications, and re-open the applications.
- C. Build a script that compares current CPU usage values to a threshold and clears data as needed.
- D. Add a "Clear Collection" activity at the beginning of the Process.xaml workflow.

**Answer: A**

Explanation:

The best practice for creating a repetitive process in the REFramework and defending against potential robot crashes such as "out of memory" is to mark all "Invoke Workflow File" activities from the Main.xaml file with the Isolated option. The Isolated option enables the workflow to run in a separate process, which reduces the memory consumption and the risk of memory leaks. It also improves the stability and the performance of the robot, as it isolates the errors and the exceptions that might occur in the invoked workflow. The Isolated option can be found in the Properties panel of the "Invoke Workflow File" activity, under the Options category. By marking all the invoked workflows as Isolated, the developer can ensure that the robot can handle a large number of transactions without crashing or slowing down.

#### NEW QUESTION # 46

What is the purpose of the Invoke Code activity in UiPath?

- A. Invokes Java code, optionally passing it a list of input arguments.
- **B. Invokes VB.NET or C# code, optionally passing it a list of input arguments.**
- C. Invokes VB MET code optionally passing it a list of input arguments
- D. Invokes VB MET or Java code optionally passing it a list of input arguments

**Answer: B**

Explanation:

The purpose of the Invoke Code activity in UiPath is to invoke VB.NET or C# code, optionally passing it a list of input arguments. The Invoke Code activity allows the developer to write and execute custom code in VB.NET or C# within a UiPath workflow. The Invoke Code activity has a Code property, where the developer can enter the code to be executed. The Invoke Code activity also has an Arguments property, where the developer can specify the input and output arguments for the code. The Invoke Code activity can be useful for performing complex calculations, manipulating data, or integrating with external libraries or applications that are not supported by the existing UiPath activities. References: [Invoke Code]

## NEW QUESTION # 47

.....

The passing rate of our UiPath-ADPv1 study material is very high, and it is about 99%. We provide free download and tryout of the UiPath-ADPv1 question torrent, and we will update the UiPath-ADPv1 exam torrent frequently to guarantee that you can get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our UiPath-ADPv1 Latest Questions are compiled by the experienced professionals elaborately. So it will be very convenient for you to buy our product and it will do a lot of good to you.
