2025 The Best UiPath-ADPv1 – 100% Free Valid Exam Online | Pass UiPath-ADPv1 Test

One of the biggest challenges of undertaking a UiPath UiPath-ADPv1 exam is managing your time effectively. This means setting aside enough time to stud. Many students struggle with this challenge because they are not able to set aside enough time to study and end up rushing through the material at the last minute. Our UiPath UiPath-ADPv1 PdfDumps offer an alternate way by providing relevant UiPath UiPath-ADPv1 questions and answers to prepare in the shortest possible time.

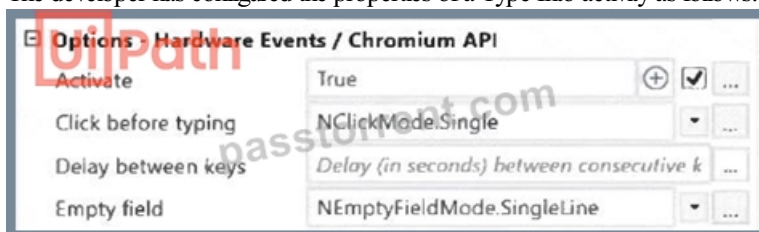

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q105-Q110):

NEW QUESTION # 105

A developer is building an automation which types text into a text file. The Activity Project Settings for UI Automation Modern activities are set as follows:

The developer has configured the properties of a Type Into activity as follows:

What is the behavior of the Type Into activity when executing the workflow?

- A. The activity will remove Multi Line in Run mode and a Single Line in Debug mode.
- B. The activity will use only properties set in Activity Project Settings.
- C. The activity will remove a Single Line in Run mode and Multi Line in Debug mode.
- D. The activity will remove a Single Line in Run mode and in Debug mode.

Answer: C

Explanation:

The behavior of the Type Into activity when executing the workflow is that the activity will remove a Single Line in Run mode and Multi Line in Debug mode. This is because the activity has the Empty field property set to NEmptyFieldMode.SingleLine, which means that the activity will delete the existing content in the field by sending Ctrl+A and Delete keystrokes before typing the text. However, the activity also has the Debug mode property set to NEmptyFieldMode.MultiLine, which means that the activity will delete the existing content in the field by sending Ctrl+A, Shift+Home, and Delete keystrokes before typing the text. The Debug mode property overrides the Empty field property when the workflow is executed in Debug mode. Therefore, the activity will use

different keystrokes to empty the field depending on the mode of execution. References:

- A. Version, Application, Screen, UI Element.
- B. Screen, Application, Version, UI Element.
- C. Application, Version, Screen, UI Element.
- D. Application, Screen, UI Element, Version.

Answer: D

NEW QUESTION # 108

What is the correct execution order of the State activity sections?

instructions: Drag the Description found on the "Left" and drop on the correct Execution Order found on the "Right"

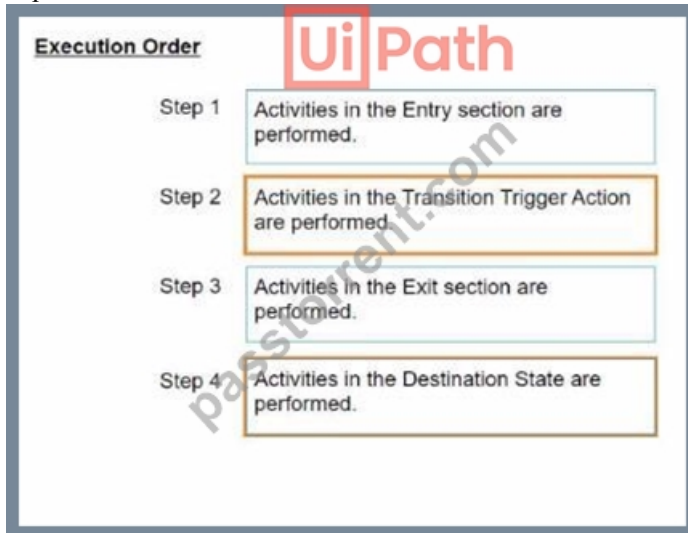

Description	Execution Order
Activities in the Exit section are performed.	Step 1
Activities in the Destination State are performed.	Step 2
Activities in the Entry section are performed.	Step 3
Activities in the Transition Trigger Action are performed.	Step 4

Answer:

Explanation:

Description	Execution Order
Activities in the Exit section are performed.	Step 3
Activities in the Destination State are performed.	Step 4
Activities in the Entry section are performed.	Step 1
Activities in the Transition Trigger Action are performed.	Step 2

Explanation:

NEW QUESTION # 109

While working in an RPA testing project, you encountered the following activity in one of the workflows included in the project.

What action can you perform in your mocked file to replace the functionality of the MessageBox with a LogMessage during mock testing?

- A. Synchronize mock.
- B. Remove mock activity.
- C. Surround activity with mock.
- D. Create mock workflow.

Answer: C

Explanation:

To replace the functionality of the MessageBox with a LogMessage during mock testing, the developer can perform the action of Surround activity with mock. This action inserts a mock activity around the selected activity, which allows the developer to change the behavior of the activity for testing purposes. For example, the developer can right-click on the MessageBox activity and select Surround activity with mock from the dropdown menu. This will create a mock activity that contains the MessageBox activity. The developer can then edit the mock activity and replace the MessageBox activity with a LogMessage activity, which will write the message to the output panel instead of displaying it in a dialog box. This way, the developer can test the functionality of the workflow without having to interact with the MessageBox dialog box. References: [Mock Testing], [Surround Activity with Mock]

NEW QUESTION # 110

.....

The UiPath UiPath-ADPv1 certificate stands out among the numerous certificates because its practicability and role to improve the clients stocks of knowledge and practical ability.
