- A. RunTest block is where the Test Case should be created. The RunTest should contain the actions specific to the Test Case.
- B. RunTest block is where workflows specific to the Test Case should be invoked. If an Application Exception occurs, the current transaction is being retried. If a Business Rule Exception occurs, the block will skip the transaction.
- C. RunTest block is where the Test Case should be invoked. The RunTest should be replaced at design time with an Invoke Workflow activity referencing the Test Case at the execution time. At the execution time, the Test Case will run instead of the RunTest block.
- D. RunTest block is where the Test Case is executed. The Placeholder activity changes at runtime into an Invoke Workflow File activity.

Answer: D

At runtime, the Placeholder activity within the block dynamically changes into an Invoke Workflow File activity that points to the actual test case implementation.
