## Latest UiPath-TAEPv1 Exam Vce, Certification UiPath-TAEPv1 Exam

TestValid is subservient to your development. And our experts generalize the knowledge of the exam into our products showing in three versions. PDF version of UiPath-TAEPv1 exam questions - support customers' printing request, and allow you to have a print and practice in papers. Software version of UiPath-TAEPv1 learning guide - supporting simulation test system, and remember this version support Windows system users only. App/online version of UiPath-TAEPv1 mock quiz - Being suitable to all kinds of equipment or digital devices, and you can review history and performance better.

## UiPath Test Automation Engineer Professional v1.0 Sample Questions (Q11-Q16):

### NEW QUESTION # 11

When creating a new test set in UiPath Orchestrator, what is the purpose of using a wildcard symbol (\*) for the project version?

The screenshot shows the 'Add TestSet' dialog in UiPath Orchestrator. The 'Name' field is 'Regression test set' and the 'Description' is 'Regression testing'. Under the 'Select Projects' section, there is a table with columns: Project, Version, Include Prerelease, and Supported Coverage. The first row shows a project with version '1.0.\*' (selected with a checkbox) and 'None' for supported coverage. The second row shows a project with version '1.0.\*' (not selected) and 'Activity' for supported coverage. The '1.0.\*' version in the second row is highlighted with a red box. The 'Next' button is visible at the bottom right.

- A. The first project version starting with 1.0. will be used.
- B. Any project version starting with 1.0. will be used.
- C. The latest project version starting with 1.0. will be used.
- D. A validation error will be displayed after clicking on the Next button.

**Answer: C**

**Explanation:**

In UiPath Orchestrator, using a wildcard symbol (\*) in the project version (e.g., 1.0.\*) means that the latest available version that

starts with 1.0. will be used when the test set is executed. This helps ensure the most recent compatible package is always selected.

#### NEW QUESTION # 12

What are the steps to re-execute a test case from UiPath Orchestrator?

- A. Navigate to Testing > Test Executions, select a test run, go to More actions > Details, select a test case, and go to More actions > Re-execute.
- B. Navigate to Testing > Test Executions, select a test run. go to More actions > Details, select a test case, and go to View Assertions > Re-execute.
- C. Navigate to Testing > Test Executions, select a test run, go to More actions > Details, select a test case, and go to Details > Re-execute.
- D. Navigate to Testing > Test Cases, select a test run, go to More actions > Details, select a test case, and go to More actions > Re-execute.

**Answer: A**

Explanation:

To re-execute a test case from UiPath Orchestrator, go to Testing > Test Executions, select the relevant test run, click More actions > Details, then select the test case, and finally choose More actions > Re-execute. This allows for isolated re-execution of failed or specific test cases.

#### NEW QUESTION # 13

How can the activities covered during a test case execution in UiPath Studio be checked?

- A. By checking the Run tab under Robot Executor.
- B. By checking the Output tab in UiPath Studio.
- C. By opening the Activity Coverage panel and double-clicking the test case.
- D. By opening the Descriptor Coverage panel and double-clicking the test case.

**Answer: C**

Explanation:

The Activity Coverage panel in UiPath Studio shows which activities were executed during a test case run. By double-clicking the test case in this panel, you can review coverage and identify untested or redundant activities.

#### NEW QUESTION # 14

What is Descriptor Coverage panel used for in UiPath Studio?

- A. The Descriptor Coverage panel is used for inputting UI elements for object recognition, that are required to be covered during the execution process.
- B. The Descriptor Coverage panel is used to view UI elements that have been covered during execution and to analyze selector coverage or debug workflows with failed coverage.
- C. The Descriptor Coverage panel is only used when there are failed selectors, it has no use during successful test case runs.
- D. The Descriptor Coverage panel is used to store the selectors and Object Repository UI elements that will be needed for different test cases.

**Answer: B**

Explanation:

The Descriptor Coverage panel in UiPath Studio is used to view UI elements covered during test execution and to analyze selector coverage, helping identify elements that were or were not interacted with. It's also useful for debugging workflows where coverage may be incomplete or missing.

#### NEW QUESTION # 15

Which are the available actions that enable a user to examine the test execution results in UiPath Orchestrator?

- A. View execution details, View assertions, and View attachments.
- B. View execution details, View logs, and View requirements.
- C. View execution details, View assertions, and View logs.
- D. View execution details, View automation rate, and View logs.

**Answer: C**

Explanation:

In UiPath Orchestrator, users can examine test execution results through the following actions:

## NEW QUESTION # 16

.....

It is universally accepted that the competition in the labor market has become more and more competitive in the past years. In order to gain some competitive advantages, a growing number of people have tried their best to pass the UiPath-TAEPv1 exam. Because a lot of people hope to get the certification by the related exam, now many leaders of companies prefer to the candidates who have the UiPath-TAEPv1 Certification. In their opinions, the certification is a best reflection of the candidates' work ability, so more and more leaders of companies start to pay more attention to the UiPath-TAEPv1 certification of these candidates.
