

Unique 500-710 Learning Guide display the most authentic Exam Questions - TrainingDump

BTW, DOWNLOAD part of TrainingDump 500-710 dumps from Cloud Storage: <https://drive.google.com/open?id=19xfOs7DZoQOnANOGluYfDoyRs63myoXW>

Will you feel nervous in facing the real exam? 500-710 Soft test engine can stimulate the real exam environment, so that you can know what the real exam is like, you're nerves will be reduced, at the same time, your confidence will be strengthened. In addition, 500-710 Soft test engine can install in more than 200 computers, and it supports MS operating system, and it has two modes for practicing. We offer you free demo for 500-710 Soft test engine, you can have a try before buying, so that you can have a better understanding of what you are going to buy. You can enjoy free update for 365 days, and the update version for 500-710 exam materials will be sent to you automatically.

Cisco 500-710 Certification Exam is an important credential for IT professionals who want to advance their careers in video infrastructure implementation. Cisco Video Infrastructure Implementation certification demonstrates a candidate's ability to design, deploy, and support video infrastructure solutions that meet the needs of their organizations. It also provides a competitive edge in the job market by demonstrating a candidate's advanced skills and knowledge in this specialized area of IT.

500-710 Pass4sure Exam Prep & 500-710 Reliable Exam Testking

With rigorous analysis and summary of 500-710 exam, we have made the learning content easy to grasp and simplified some parts that beyond candidates' understanding. In addition, we add diagrams and examples to display an explanation in order to make the interface more intuitive. Our 500-710 Exam Questions will ease your pressure of learning, using less Q&A to convey more important information, thus giving you the top-notch using experience. With our 500-710 practice engine, you will have the most relaxed learning period with the best pass percentage.

Cisco Video Infrastructure Implementation Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which protocol is used to communicate codec capabilities and Real-Time Transport Protocol ports?

- A. Real-Time Transport Control Protocol
- **B. Session Description Protocol**
- C. Assent
- D. H.460

Answer: B

NEW QUESTION # 87

What is the maximum network latency allowed between peers in a cluster?

- A. 30 ms total
- **B. 100 ms one way**
- C. 300 ms total
- D. 150 ms one-way

Answer: B

Explanation:

* A cluster is a group of servers or nodes that work together to provide high availability, scalability, and load balancing for applications and services¹.

* Network latency is the time it takes for a packet of data to travel from one point to another on a network². It is usually measured in milliseconds (ms) and can be affected by various factors, such as distance, bandwidth, congestion, and routing².

* The maximum network latency allowed between peers in a cluster depends on the type and configuration of the cluster, as well as the application and service requirements. Different cluster solutions may have different latency thresholds and recommendations for optimal performance and stability^{3,4,5}.

* one of the common cluster solutions that has a maximum network latency requirement is the Windows Server Failover Clustering (WSFC)³. WSFC is a feature of Windows Server that enables servers to work together to provide continuous service for applications and services, such as SQL Server, Exchange Server, and Hyper-V³.

* According to the Microsoft documentation, the maximum network latency allowed between peers in a WSFC cluster is 100 ms one way³. This means that the round-trip latency between any two nodes in the cluster should not exceed 200 ms. This requirement applies to both the private and public network connections between cluster nodes, and is based on the assumption that the network is reliable and stable³.

* The other options are incorrect because:

* A. 30 ms total is too low for a realistic network latency requirement between peers in a cluster. It is unlikely that any network can consistently provide such a low latency across different locations and conditions².

* B. 300 ms total is too high for a network latency requirement between peers in a cluster. It is likely that such a high latency would cause performance degradation, timeouts, and failures for applications and services that rely on the cluster².

* D. 150 ms one-way is also too high for a network latency requirement between peers in a cluster. It would imply a round-trip latency of 300 ms, which is above the threshold for WSFC and other cluster solutions^{3,4,5}.

NEW QUESTION # 88

An engineer wants to add a domain to a numeric E.164 alias dialed by an H.323 endpoint. Which option is the Cisco recommended method to add this domain in the Expressway configurations?

- A. user policy

- B. transforms
- C. call policy
- D. service preference

Answer: B

NEW QUESTION # 89

Which option is the first thing to occur when a source endpoint dials a destination endpoint?

- A. An invite is sent to the SIP Server.
- B. An invite is sent to the Cisco Meeting Server.
- C. An alert is sent to the Cisco Meeting Server.
- D. An alert is sent to the SIP Server.

Answer: A

Explanation:

When a source endpoint dials a destination endpoint, the first thing to occur is that an invite is sent to the SIP Server. The SIP Server is a logical entity that handles the signaling and call setup between SIP endpoints. The invite message contains the source endpoint's identity, capabilities, and session parameters, as well as the destination endpoint's address. The SIP Server then routes the invite message to the destination endpoint or to another SIP Server if the destination endpoint is in a different domain¹². References := 12

NEW QUESTION # 90

While scheduling a CMS conference on TMS, an engineer notices that it will not add a WebEx meeting as a participant. Which option is the possible issue?

- A. A SIP trunk is required between the WebEx server and CMS.
- B. WebEx can be added to conferences only using Telepresence Server/Conductor.
- C. The WebEx server address must be properly configured in TMS and the CMS.
- D. WebEx requires a domain be added to the CMS.

Answer: B

NEW QUESTION # 91

.....

Now I want to introduce the online version of our 500-710 learning guide to you. The most advantage of the online version is that this version can support all electronic equipment. If you choose the online version of our 500-710 study materials, you can use our products by your any electronic equipment including computer, telephone, IPAD and so on. We believe the online version of our 500-710 practice quiz will be very convenient for you.
