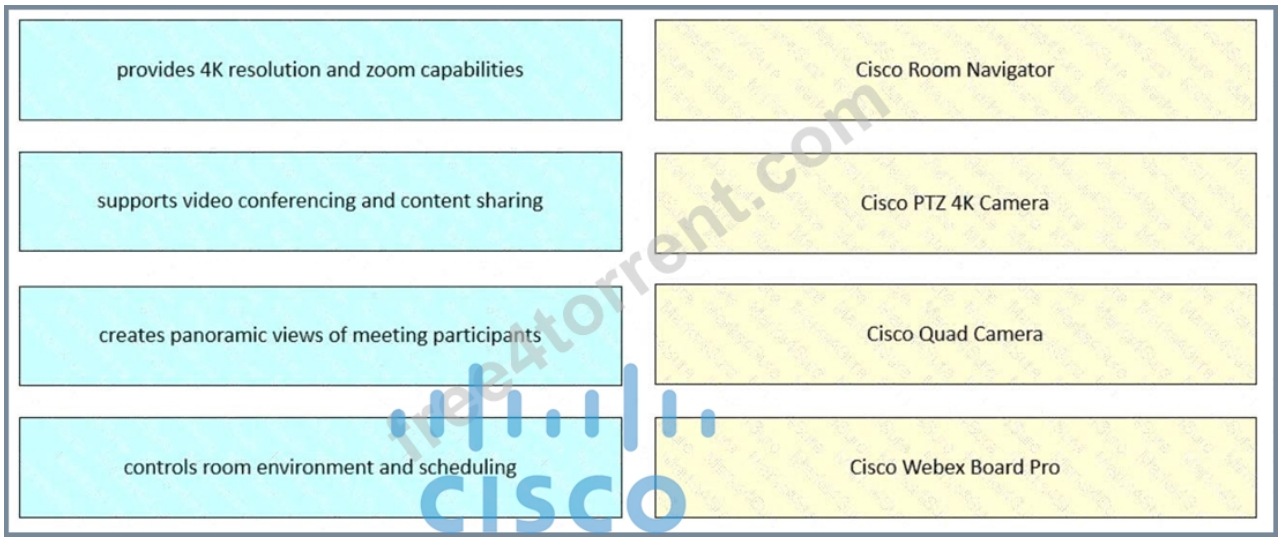
It introduces network devices, collaboration endpoints like IP phones and video systems, and explains on-premises collaboration deployments using tools like Cisco Unified Communications Manager. It also covers how video systems integrate into collaboration environments and highlights Cisco's cloud services for enterprise communication, including Webex Meetings, Webex Teams, and hosted collaboration solutions. |
| Topic 3 | • Cisco UCS and Data Center Architecture: This section of the exam measures the skills of a Data Center Engineer and introduces Cisco's UCS and data center solutions. It explains the devices found in a data center, including switches, UCS servers, and director switches, and describes different server deployment models. Students will also learn about virtualization components like virtual machines, hypervisors, cloud computing concepts, and deployment models. The section covers how Cisco UCS devices fit into campus networks, edge locations, and data centers, and explains the key components and connections used in UCS architecture. |
| Topic 4 | • Cisco Software: This section of the exam measures the skills of a Network Engineer and discusses Cisco's software systems and licensing. It explains the difference between IOS install and bundle modes and gives an overview of different licensing models. Students learn how to manage Cisco software images, including backing up, transferring, and installing images via FTP, TFTP, or USB. It also covers how to handle configuration files to keep devices running properly and ensure smooth upgrades or replacements. |

## Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q41-Q46):

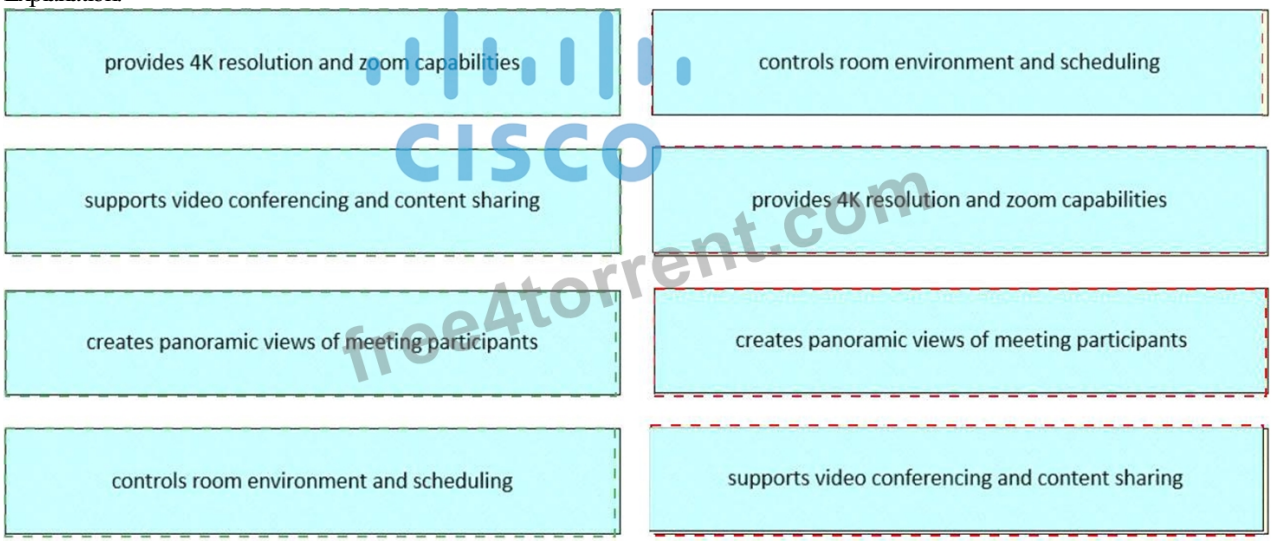
**NEW QUESTION # 41**

Refer to the exhibit. Drag and drop the functions from the left onto the corresponding devices on the right.

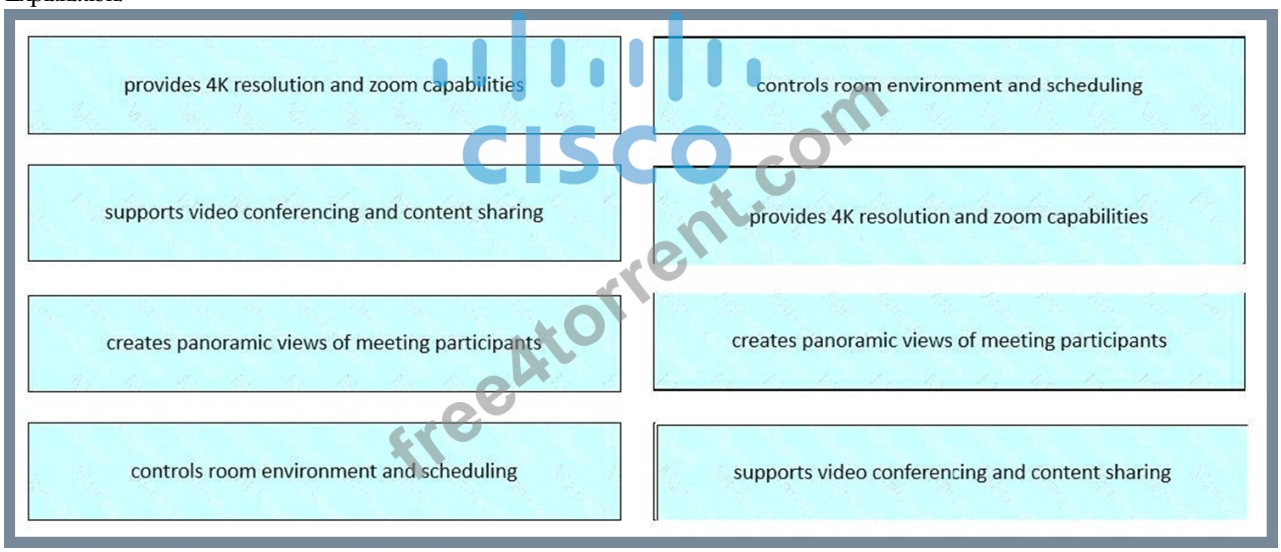


**Answer:**

Explanation:



Explanation:



According to theCisco FLDTEC training and product documentation:

* Cisco PTZ 4K Camera: Offers high-definition video capture with pan-tilt-zoom features and 4K resolution - ideal for large conference spaces.
* Cisco Webex Board Pro: Interactive collaboration device that combines video conferencing, whiteboarding, and wireless content sharing.
* Cisco Quad Camera: Features multiple cameras for wide-angle views, speaker tracking, and automatic framing - great for medium

to large meeting rooms.
* Cisco Room Navigator: A touchscreen device that provides intuitive control for room settings, scheduling, and call management.

**NEW QUESTION # 42**
Refer to the exhibit. Which replaceable components are highlighted on the three different series of Cisco UCS servers?

- A. GPU sockets
- B. fan modules
- C. power supplies
- D. storage modules

**Answer: B**

Explanation:
The highlighted components in all three Cisco UCS server models (5108 B-Series Blade Server Chassis, X9508 X Series Modular Server Chassis, and C225 M6 Rack Server) are fan modules, which are field- replaceable units responsible for cooling the system. The highlighted components in the images correspond tocooling fans- these are essential for maintaining optimal thermal conditions within each Cisco UCS server type.Here's a breakdown of what's visible in each:
* Cisco UCS 5108 B-Series Blade Server Chassis: The highlighted vertical rectangular components are fan modules, which provide high-efficiency airflow for the densely packed blades.
* Cisco UCS X9508 X-Series Modular Server Chassis: The front-facingfan traysare clearly marked, used to cool the modular nodes and shared infrastructure.
* Cisco UCS C225 M6 Rack Server: The highlighted components on the side of the motherboard are alsofan modules, directly responsible for cooling the CPU, memory, and other internal components.
These fans arefield-replaceable units (FRUs)and are routinely accessed by technicians during preventive maintenance or fault replacement.

**NEW QUESTION # 43**
What is the primary purpose of backing up the endpoint configuration prior to replacing the device?

- A. To update the firmware of the device
- B. To troubleshoot network connectivity issues
- C. Torestore settings on the new device after replacement
- D. To generate a performance report for the old device

**Answer: C**

Explanation:
Backing up the configuration of a network device before replacement is a critical step to ensure business continuity and minimize downtime. The primary purpose of this backup is torestore the existing settings onto the new device, ensuring that it operates identically to the one being replaced.
This process includes preserving interface configurations, routing protocols, access control lists, and other essential parameters. By restoring the backed-up configuration to the new device, network administrators can quickly reintegrate it into the network infrastructure without the need for manual reconfiguration, thereby reducing the risk of errors and service disruptions.
Options A, B, and C do not align with the primary objective of configuration backups in the context of device replacement.

**NEW QUESTION # 44**
Which pod-based deployment model provides the most flexibility and scalability in a modern data center topology?

- A. End of Row (EoR)
- B. Spine-and-Leaf
- C. Top of Rack (ToR)
- D. Fabric Extender model

**Answer: B**

Explanation:

TheSpine-and-Leafarchitecture is the preferredpod-based deployment modelin modern data centers because of itshigh scalability and flexibility. In this topology:
* Leaf switchesconnect to servers and act as the access layer.
* Spine switchesfunction as the core layer, interconnecting all leaf switches.
This non-blocking, highly redundant model supportspredictable latency, easy horizontal scaling, and load balancing, making it ideal for cloud-scale and virtualized environments.
* Top of Rack (ToR)andEnd of Row (EoR)are physical cabling layouts that do not inherently provide the same level of architectural scalability.
* Fabric Extender modelsextend switch ports but depend on upstream switches for intelligence, limiting flexibility.

**NEW QUESTION # 45**
Drag and drop the configuration tasks for restoring software from the left onto the corresponding commands on the right.

**Answer:**

Explanation:

Explanation:
These command associations are part of Cisco IOS essentials taught in FLDTEC's "Device Configuration and Verification" topic.
Here's how each command functions:
show running-config
Displays the active configuration stored in RAM.
This command is used to verify the current settings on a Cisco device.
copy running-config startup-config
Saves the current running configuration to NVRAM, ensuring the configuration persists after a reboot.
This is critical after making changes to devicesettings.
copy tftp: running-config
Loads a configuration from a TFTP server and applies it to the current running configuration.
Often used during remote device setup or restoration.
copy usbflash0:backup.cfg running-config
Restores a saved configuration file from a USB drive.
Useful in field operations where physical backup media is used during maintenance.
These tasks are routine for field technicians performing configuration backups, restorations, and diagnostics in Cisco environments.

**NEW QUESTION # 46**
.....

Maybe you can find the data on the website that our 800-150 training materials have a very high hit rate, and as it should be, our pass rate of the 800-150 exam questions is also very high.
