Employers prefer to hire certified professionals as they are assured of their knowledge and skills, ultimately increasing the employer's trust in the employee.

## ASIS Physical Security Professional Exam Sample Questions (Q218-Q223):

### NEW QUESTION # 218

Libel is oral defamation; libel is defamation through the written word.

- A. False
- B. True

**Answer: A**

### NEW QUESTION # 219

Which of the following lamp types emits an almost monochromatic yellow light and provides the poorest color rendition for a CCTV camera?

- A. Fluorescent
- B. Incandescent
- C. Low-pressure sodium
- D. Metal halide

**Answer: C**

Explanation:

Low-pressure sodium (LPS) lamps emit a nearly monochromatic yellow light, which severely limits color rendition. This makes them unsuitable for CCTV surveillance where accurate color reproduction is needed.

They are, however, energy efficient and used in some outdoor lighting applications where color accuracy is not critical.

B (Incandescent), C (Fluorescent), and D (Metal halide) all offer better color rendition than LPS lamps, with metal halide being the best for color fidelity.

### NEW QUESTION # 220

In which ingredients are added to the loss prevention function one by one as the need arises, without a comprehensive plan, is called:

- A. Small relative security
- B. Independent security
- C. Detached security
- D. Piecemeal security

**Answer: D**

Explanation:

Piecemeal security refers to the ad hoc or fragmented implementation of security measures without an overarching strategic plan. Security elements are added reactively, often after an incident or perceived risk, rather than being guided by a coordinated risk assessment. This results in inconsistent, sometimes redundant or ineffective protection efforts, leaving gaps in security coverage.

### NEW QUESTION # 221

Which of the following interior sensors can be defined as both passive and active?

- A. Pressure
- B. Infrared

- C. Vibration
- D. Microwave

**Answer: B**

Explanation:

Infrared sensors can function as both passive and active types:

Passive Infrared (PIR): Detects natural heat (infrared radiation) from people or animals.

Active Infrared: Emits infrared beams and detects interruptions in the beam (e.g., photoelectric sensors).

This dual use allows infrared to serve a variety of security applications.

A (Microwave) is strictly active.

C (Vibration) and D (Pressure) are passive only.

**NEW QUESTION # 222**

What are used only for handling and storing high-value cargo?

- A. Exclusion areas
- B. Limited areas
- C. Multiple areas
- D. None of the above

**Answer: A**

Explanation:

Exclusion areas are the most secure zones within a controlled facility, designed specifically for handling or storing high-value, classified, or critical assets. These areas have strict access controls, surveillance, and protective measures in place to prevent unauthorized access or theft.

Limited areas (A) offer less stringent protection than exclusion areas.

Multiple areas (C) is a non-standard term.

"None of the above" (D) is incorrect because exclusion areas is the correct answer.
