Valid Nutanix NCP-MCI-6.10 Exam Question, New NCP-MCI-6.10 Test Registration

In rare cases, if you fail to pass the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) NCP-MCI-6.10 exam despite using Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) exam dumps we will return your whole payment without any deduction. Take the best decision of your professional career and start exam preparation with Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) exam practice questions and become a certified Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) NCP-MCI-6.10 expert.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q75-Q80):

NEW QUESTION # 75

An administrator is managing two clusters registered to two different Prism Central instances.

After configuring a Protection Policy for synchronous replication and verifying data replication, the administrator would like to create a new Recovery Plan with automatic failover. However, the administrator finds that the Recovery Plan workflow offers only manual failure execution mode.

What configuration must be fixed to execute the failover automatically?

- A. Modify firewall to open 2030, 2036, 2073, 2090 ports on every local and remote CVM5.
- B. Protection Policy must also have a local schedule.
- C. Verify protected VM are not already part of another Recovery Plan.
- D. Primary Location and Recovery Location must be in the same AZ.

Answer: D

NEW QUESTION # 76

An administrator is protecting an application and its data stored on Volume Groups using Protection Domains. During failover tests, all application VMs restore successfully, but the application data is completely missing. How can the Protection Domain configuration be adjusted to avoid this issue in the future? (Choose two.)

- A. Place Volume Groups in a separate Protection Domain.
- **B. Manually add Volume Groups to Protected Entities.**
- **C. Select the "Auto protect related entities" checkbox.**
- D. Use application-consistent snapshots.

Answer: B,C

Explanation:

Protection Domains (PDs) in Nutanix ensure that entire applications and their associated data are protected during failover. However, Volume Groups (VGs) are not automatically included unless explicitly configured.

* Option A (Select "Auto protect related entities") is correct:

* This setting ensures that associated Volume Groups, networks, and other dependencies are included in the Protection Domain automatically.

* Without enabling this, only the VM itself would be protected, leading to missing application data upon failover.

* Option B (Manually add Volume Groups to Protected Entities) is correct:

* If "Auto protect related entities" is not enabled, the administrator must manually add Volume Groups to the Protection Domain.

* This ensures that both VMs and their attached Volume Groups are replicated and recovered together.

* Option C (Place Volume Groups in a separate Protection Domain) is incorrect:

* Separating Volume Groups into a different PD does not guarantee they failover together with VMs.

* It is best practice to keep related VMs and Volume Groups in the same PD.

* Option D (Use application-consistent snapshots) is incorrect:

* While application-consistent snapshots improve data integrity, they do not fix missing Volume Groups in failover scenarios.

NEW QUESTION # 77

An administrator using a dark site deployment for LCM is attempting to upgrade to the latest BIOS. After completing an inventory scan, the administrator does not see the expected BIOS version available for upgrade. What is the most likely reason the latest BIOS is not shown?

- A. AOS needs to be upgraded first.
- B. The dark site webserver is not accessible.
- C. The BMC version needs to be upgraded first.
- **D. The latest compatibility bundle has not been uploaded.**

Answer: D

Explanation:

In a dark site deployment, LCM does not automatically fetch updates from the internet. The administrator must manually upload compatibility bundles.

* Option B (The latest compatibility bundle has not been uploaded) is correct:

* The compatibility bundle contains firmware mappings, allowing LCM to detect the correct BIOS version.

* Option A is incorrect:

* AOS does not need to be upgraded first for a BIOS update.

* Option C is incorrect:

* The BMC firmware does not always need updating before BIOS updates.

* Option D is incorrect:

* In a dark site deployment, LCM does not rely on an internet connection, so webserver access is not required.

NEW QUESTION # 78

An administrator has been asked to calculate baseline Capacity Runway on a newly registered AHV cluster. The cluster has been running for 16 days, but no runway projections are displayed. Why are no Capacity Runway projections being displayed?

- A. Capacity Planning requires at least 21 days of data.
- B. Capacity Planning requires at least 6 months of data.
- C. Capacity Planning requires at least 3 months of data.
- **D. Capacity Planning requires at least 30 days of data.**

Answer: D

NEW QUESTION # 79

After upgrading Prism Central from PC2022.1 to PC2024.1, an administrator is unable to log in with their IAM domain account. What is the first troubleshooting step the administrator should take?

- A. Ensure port 9441 is open in the firewall.
- B. Ping the Domain Controller from the CVM.
- **C. Log in with a local admin account.**
- D. Validate the trusted signing certificate of the organization.

Answer: C

Explanation:

After a Prism Central upgrade, IAM authentication settings may require reconfiguration.

* Option D (Log in with a local admin account) is correct:

* If IAM authentication fails, the local admin account must be used to check domain settings.

* Option A (Ping the Domain Controller) is incorrect:

* Network connectivity is important, but the issue is likely related to IAM settings, not network reachability.

* Option B (Check firewall port 9441) is incorrect:

* Port 9441 is used for SSO authentication, but port issues usually result in login delays, not complete failures.

* Option C (Validate signing certificate) is incorrect:

* While certificates can cause issues, local admin login should always work.
