

Unparalleled Huawei - H12-725_V4.0 Test Prep

BONUS!!! Download part of TrainingDumps H12-725_V4.0 dumps for free: <https://drive.google.com/open?id=1B8KgzPFHbjI9iuqT0K2UqJUSMBDyLSr>

Here, we want to describe the H12-725_V4.0 PC test engine for all of you. H12-725_V4.0 PC test engine is suitable for all the windows system, which is very convenient to be installed. Besides, it does not need to install any assistant software. What's more, our H12-725_V4.0 PC test engine is virus-free and safe which can be installed on your device. With the Huawei H12-725_V4.0 simulate test, you can have a test just like you are in the real test environment. Dear, everyone, practice more frequently, you will success finally.

Huawei H12-725_V4.0 (HCIP-Security V4.0) certification exam is an excellent way for IT professionals to validate their knowledge and skills in network security. HCIP-Security V4.0 certification covers a wide range of topics and is suitable for IT professionals who want to advance their careers in network security. With the growing demand for network security professionals, obtaining this certification can open up new career opportunities for IT professionals.

Huawei H12-725_V4.0 Exam is an important certification for professionals looking to advance their career in the field of network security. It is recognized globally as a benchmark for excellence in network security and is highly valued by employers. Passing H12-725_V4.0 Exam demonstrates a professional's ability to protect the network against cyber-attacks, mitigate security risks and ensure the confidentiality, integrity, and availability of data. HCIP-Security V4.0 certification is particularly important for professionals working in the telecommunications industry, where ensuring network security is critical to maintaining the trust of customers and partners.

Useful H12-725_V4.0 Dumps, H12-725_V4.0 Exam Torrent

We guarantee that you can enjoy the premier certificate learning experience under our help with our H12-725_V4.0 prep guide since we put a high value on the sustainable relationship with our customers. First of all we have fast delivery after your payment in 5-10 minutes, and we will transfer H12-725_V4.0 Guide Torrent to you online. Besides if you have any trouble coping with some technical and operational problems while using our H12-725_V4.0 exam torrent, please contact us immediately and our 24 hours online services will spare no effort to help you solve the problem in no time.

Huawei HCIP-Security V4.0 Sample Questions (Q33-Q38):

NEW QUESTION # 33

Predefined URL categories on Huawei firewalls reside in the URL category database delivered with the device and do not need to be manually loaded.

- A. TRUE

- B. FALSE

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

- * Huawei firewalls come with a built-in URL filtering database, which includes predefined categories such as:
- * Malicious websites
- * Phishing sites
- * Social media
- * Business services
- * The URL category database is periodically updated by Huawei, ensuring that new threats are detected automatically.
- * Why is this statement true?
- * Administrators do not need to manually load URL categories; they are delivered with the firewall and updated regularly.

NEW QUESTION # 34

Huawei iMaster NCE-Campus is a web-based centralized management and control system in the CloudCampus Solution. It supports user access management and can function as multiple types of authentication servers. Which of the following servers can iMaster NCE-Campus not be used as?

- A. RADIUS server
- B. HWTACACS server
- C. Portal server
- D. AD server

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

- * iMaster NCE-Campus functions as multiple authentication servers, including:
- * Portal Server# For web-based authentication.
- * RADIUS Server# For centralized authentication and policy enforcement.
- * HWTACACS Server# For administrative command authorization.
- * Why is B correct?
- * iMaster NCE-Campus cannot function as an Active Directory (AD) server. It can integrate with an external AD server but does not replace it.

HCIP-Security References:

NEW QUESTION # 35

In SSL VPN, the firewall performs access authorization and control based on which of the following dimensions?

- A. Port number
- B. Role
- C. IP address
- D. MAC address

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation:

- * SSL VPN authorization is role-based:
- * Role-based policies determine user permissions.
- * IP-based access control ensures users connect from allowed networks.
- * Why are B and C incorrect?
- * SSL VPN does not authenticate based on MAC address or port number.

NEW QUESTION # 36

Sort the intrusion prevention steps in sequence based on the working mechanism of the firewall device.

Performs the response action based on the IPS profile.		1
Identifies and parses application-layer protocols.		2
Reassembles IP fragments and TCP flows.		3
Performs signature matching.		4

Answer:

Explanation:

Performs the response action based on the IPS profile.	Identifies and parses application-layer protocols.	1
Identifies and parses application-layer protocols.	Reassembles IP fragments and TCP flows.	2
Reassembles IP fragments and TCP flows.	Performs signature matching.	3
Performs signature matching.	Performs the response action based on the IPS profile.	4

Explanation:

Intrusion Prevention Systems (IPS) in firewalls follow a multi-step process to detect and mitigate threats. The steps occur in a logical sequence:

1##Step 1: Identifies and Parses Application-Layer Protocols

- * The firewall first identifies the protocol being used (e.g., HTTP, FTP, DNS, SMTP).
- * Parsing the protocol helps the IPS engine understand how the data is structured and what types of attacks might be embedded.
- * This step is crucial for detecting protocol-based attacks like SQL injection or cross-site scripting (XSS).

2##Step 2: Reassembles IP Fragments and TCP Flows

- * Attackers often split malicious payloads across multiple packets to evade detection.
- * The firewall reassembles fragmented packets and TCP flows to reconstruct the full data stream.
- * This step is critical for detecting evasion techniques such as fragmented attacks or out-of-order packet attacks.

3##Step 3: Performs Signature Matching

- * Once the full data stream is reassembled, the IPS compares it against known attack signatures.
- * Signature matching helps detect:
- * Malware patterns (e.g., botnets, Trojans).

- * Exploits targeting vulnerabilities in software and operating systems.
- * Firewalls use predefined signature databases that are regularly updated.

4##Step 4: Performs the Response Action Based on the IPS Profile

- * If an attack is detected, the firewall takes an action based on the IPS policy:
- * Block the traffic (drop malicious packets).
- * Alert the administrator (generate logs and alerts).
- * Rate-limit traffic (slow down potential attack sources).
- * The response mechanism is customizable based on security requirements.

NEW QUESTION # 37

IPsec VPN does not support encapsulation of non-IP unicast packets.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

- * IPsec VPN only supports IP unicast traffic.
- * Non-IP unicast packets (such as multicast and broadcast) are not natively supported.
- * To transmit multicast traffic over IPsec, GRE over IPsec is required.
- * Why is this statement true?
- * Standard IPsec VPN does not support non-IP unicast packets.
