Exam Topics in Detail

The Amazon CLF-C01 exam covers four major domains, namely Cloud concepts; security and compliance; technology; billing, and pricing. Each topic has a specific percentage, which indicates the weight of questions that may be administered from them. These objectives are designed to validate the candidates' expertise in a range of skill areas, which include AWS Cloud and AWS services, such as computing, databases, storage, and network. Let's look at these subjects in detail.

- **Billing and Pricing – 16%**

This topic has the least percentage among other exam domains. However, your excellent performance in the questions from this objective can make a major difference between passing and failing your certification test. So, the interested candidates should have a good understanding of comparing and contrasting different pricing models for AWS; recognizing different account structures concerning AWS pricing and billing; identifying available resources for billing support.

- **Technology – 33%**

Within this objective, the test takers are required to demonstrate that they are able to define different methods used in operating and deploying in AWS Cloud; define global AWS infrastructure; identify core AWS services; identify resources for

technical support.

- **Cloud Concepts – 26%**

This topic covers the individuals' skills in defining AWS Cloud and its value proposition; identifying different areas of AWS Cloud economics; highlighting different principles of Cloud architecture design.

- **Security and Compliance – 25%**

This domain requires that the learners know how to define AWS shared responsibility models; define the concepts of AWS Cloud security and compliance; identify the capabilities of AWS access management; identify resources for security support.
