

Unparalleled Study D-PWF-DY-A-00 Plan - Study Dell PowerFlex Implementation Achievement Plan

Our ActualtestPDF's D-PWF-DY-A-00 exam training material is the leader of D-PWF-DY-A-00 certification exam. Our D-PWF-DY-A-00 exam training materials is the result of ActualtestPDF's experienced IT experts with constant exploration, practice and research for many years. It has high accuracy and wide coverage. If you buy our D-PWF-DY-A-00 Dumps PDF, we guarantee that we will provide one year free renewal service.

If you choose to sign up to participate in EMC certification D-PWF-DY-A-00 exams, you should choose a good learning material or training course to prepare for the examination right now. Because EMC Certification D-PWF-DY-A-00 Exam is difficult to pass. If you want to pass the exam, you must have a good preparation for the exam.

Prominent Features of {EMC} EMC D-PWF-DY-A-00 Exam Questions

The D-PWF-DY-A-00 examination certification, as other world-renowned certification, will get international recognition and acceptance. People around the world prefer D-PWF-DY-A-00 exam certification to make their careers more strengthened and successful. In ActualtestPDF, you can choose the products which are suitable for your learning ability to learn.

EMC Dell PowerFlex Implementation Achievement Sample Questions (Q12-Q17):

NEW QUESTION # 12

Which two steps must be completed to finish configuring the Management Controller, once the PowerFlex has been deployed? (Select 2)

- A. Delete vSwitch0.
- **B. Enable VMware vSphere HA and DRS.**
- C. Set up a NAS server.
- **D. Reconfigure MDM roles.**
- E. Configure a File Services node.

Answer: B,D

Explanation:

After deploying PowerFlex, additional steps are necessary to finalize the Management Controller configuration:

* Enable VMware vSphere HA and DRS (Option A):

* vSphere High Availability (HA) ensures VMs are restarted on another host in case of host failure.

* Distributed Resource Scheduler (DRS) automatically balances workloads across the cluster to optimize performance and resource usage.

* Enabling these features is critical for ensuring resilience and load balancing in the PowerFlex environment.

* Reconfigure MDM Roles (Option E):

- * The Metadata Manager (MDM) roles must be reconfigured to align with the deployed topology.
- * This involves setting the Primary, Secondary, and Tie-Breaker roles for fault tolerance and system consistency.

Why Not the Other Options?

- * Option B: Configure a File Services node: This is applicable if deploying file services, but it is not a mandatory step for the Management Controller.
- * Option C: Set up a NAS server: Similar to Option B, this is not a general requirement for configuring the Management Controller unless file services are explicitly needed.
- * Option D: Delete vSwitch0: While network configuration may require adjustments, deleting vSwitch0 is not a standard step and could disrupt connectivity.

NEW QUESTION # 13

Which area in PowerFlex Manager do you go to in order to discover switches?

- A. Lifecycle
- B. Protection
- C. Settings
- D. Resources

Answer: D

Explanation:

The Resources section in PowerFlex Manager is where administrators go to discover and manage physical and virtual infrastructure components, including switches:

- * Resources Overview (Option A):
- * The Resources area provides a centralized view of hardware and software components, including switches, nodes, and other devices.
- * Discovery of switches involves scanning the network to identify switch configurations and integrate them into the PowerFlex environment for monitoring and management.
- * Why Not the Other Options?
- * Option B: Protection: This area focuses on data protection and backup solutions within PowerFlex, not hardware discovery.
- * Option C: Lifecycle: While Lifecycle helps manage the firmware and software updates, it does not handle hardware discovery tasks.
- * Option D: Settings: The Settings section is used for configuring PowerFlex Manager itself, such as network settings and system options, not discovering switches.

NEW QUESTION # 14

Which area in PowerFlex Manager do you go to in order to discover switches?

- A. Lifecycle
- B. Protection
- C. Settings

NEW QUESTION # 15

What is the minimum number of nodes required to create a production PowerFlex Management Platform Cluster?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The minimum number of nodes required to create a production PowerFlex Management Platform Cluster is 3, ensuring fault tolerance and redundancy.

* Reason for 3 Nodes (Option D):

* A minimum of three nodes is required to ensure proper cluster functionality, including quorum for the Metadata Manager (MDM) roles.

* This configuration supports high availability and fault tolerance, ensuring the cluster remains operational even if one node fails.

* Why Not the Other Options?

* Option A: 0: While additional nodes can be added to enhance capacity and redundancy, nine nodes are not the minimum requirement.

* Option B: 1: A single node does not provide redundancy or failover capabilities, which are critical for production environments.

* Option C: 2: While five nodes increase capacity and resilience, the minimum requirement is only three nodes.

NEW QUESTION # 16

PowerFlex Management Controller VMs are being deployed. Once the OVAs have been successfully deployed, what should be done before powering them on?

- A. Add a second SCSI controller to all the PFMC 2.0 nodes.
- **B. Add a second vNIC to all the PFMC 2.0 nodes.**
- C. Upgrade the version of VMware Tools.
- D. Upgrade the VM hardware version.

Answer: B

Explanation:

Before powering on the PowerFlex Management Controller (PFMC) VMs, it is crucial to add a second vNIC (virtual NIC) to enable proper communication and management capabilities:

* Add a Second vNIC to PFMC 2.0 Nodes (Option C):

* The additional vNIC is required to handle the management traffic and ensure proper network segregation for various operations within the PowerFlex environment.

* Without the second vNIC, the management network might not function as intended, potentially causing communication issues between PowerFlex components.

* Why Not the Other Options?

* Option A: Upgrade the VM hardware version: The deployed OVAs are preconfigured with the required hardware version, and upgrading it is unnecessary unless specified by Dell's updated requirements.

* Option B: Add a second SCSI controller: There is no requirement to add a second SCSI controller for PFMC nodes, as storage configurations are pre-defined in the OVA.

* Option D: Upgrade the version of VMware Tools: The OVAs are pre-packaged with a compatible VMware Tools version, and

an immediate upgrade is not required before powering on.
