Oracle Redwood Application 2025 Developer Associate Sample Questions (Q20-Q25):

NEW QUESTION # 20

In which three cases would you need a Visual Builder service instance to deploy your app to? (Choose three.)

- A. When there is an application that is accessible from a vanity URL (custom domain)
- B. For gaining access to Oracle Fusion Apps REST services
- C. When the app needs to be accessed by users who do not have Fusion Apps access
- D. For gaining access to an external database through a REST service requiring basic auth
- E. For enabling the app to be integrated into the Fusion Cloud Apps menu

Answer: A,C,D

Explanation:

Full Detailed in Depth Explanation:

A Visual Builder (VB) service instance is a stand-alone runtime environment separate from Fusion Apps. Option A is correct because external users without Fusion access require a VB instance to host the app. Option B is valid as VB instances support REST integrations with external databases using basic authentication. Option C is accurate because vanity URLs are supported by VB instances for custom domains. Option D is incorrect because Fusion Apps REST services are typically accessed via AppUI extensions within Fusion, not a separate VB instance. Option E is wrong as integration into Fusion menus relies on AppUI extensions, not a stand-alone VB instance.
